In the fish culture by biological circulating filter system, a large quantity of ammonia is excreted. It is noxious for fishes, and a rapid elimination is required. The effects of environmental factors on the nitrification in the sea water were examined. The nitrification rate was not affected by changes in the water changing rate and the ammonia concentration. The nitrification rate increased linearly with temperature rise at the range of 10 to 30 centigrade. At 40 centigrade, it was lowered. As for the air-lift in filter bed, physical stimulation was an obstructive factor to the nitrification. Since the alkalinity of recirculating sea water decreases linearly with the progress of nitrification, it is required to add alkali such as sodium bicarbonate in the long-term fish culture. In the long-term loading experiments of organic substances or ammonia, the biofilm on the filter media became thicker due to the multiplication of heterotrophy bacteria. 18 refs., 11 figs., 2 tabs.

49591 (CRIE-U–89035) **Development of water purification technologies for intensive fish culture. 3.: Selection of marine denitrifying bacteria by their denitrification pattern.** Watanabe, Y.; Kikuchi, K.; Uemoto, H.; Takeda, S.; Kiyono, M. Central Research Inst. of Electric Power Industry, Abiko, Chiba (Japan). Dec 1989. 23p. (In Japanese). Order Number DE91701401. Source: NTIS (US Sales Only), PC A03/MF A01.

Useful strains of marine denitrifying bacteria were selected for the establishment of effective denitrification system to remove nitrate accumulating in the cultural water of seawater-recirculating aquaculture system. Enrichment culture method was adopted for the isolation of denitrifying bacteria, a higher probability in the isolation was shown by the nitrite added culture method than that by the nitrate added one. The denitrification patterns of isolated denitrifying bacteria were discriminated, and the 16 strains which were considered as useful one for the intensive fish culture system were selected. Since these strains produce only gaseous nitrogen without producing toxic nitrite in the process of denitrification, they are very suitable for the system. As for the genus of 16 strains of which their activities are not changed even in continuous culture, nine strains were genus Pseudomonas and seven strains were genus Alcaligenes. Denitrifying rates of 16 strains were measured by using the acetylene inhibition technique under anaerobic condition. Denitrifying activities ranged from 131 to 4330 n mol-N_2 O/h/mg protein for the strains, the activities depended on the strains. 20 refs., 40 figs., 9 tab.

49592 (DOE/NV/10384–25) **Red Canyon wash infiltration studies.** Hurst, T.L.; Tyler, S.W.; Hess, J.W. Nevada Univ., Reno, NV (USA). Water Resources Center. Sep 1990. 34p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC08-85NV10384. Order Number DE90017652. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The soil-water-climate-vegetation interactions in the substrate of an arid zone, ephemeral wash channel were studied to determine the character, direction, and magnitude of soil-water flux. Thermocouple psychrometers and neutron moisture probe access tubes were placed in 9-m-deep holes drilled in an ephemeral channel and an adjacent interchannel area. Nearly two years of precipitation, runoff, and soil-water data indicated that the combination of periodic flooding and coarse alluvial sediments in the wash channel allowed water to infiltrate below the zone of active evapotranspiration and eventually recharge the regional ground-water system. Conversely, most, if not all, of precipitation falling on the interchannel area was held in the upper 1 to 2 m of soil and there transpired or evaporated. 28 refs., 11 figs., 4 tabs.

49593 (FWS/OBS–81/03) **Willapa Bay: A historical perspective and a rationale for research.** Hedgpeth, J.W. (Hedgpeth

(Joel W.), Santa Rosa, CA (USA)); Obrebski, S. Fish and Wildlife Service, Washington, DC (USA); Hedgpeth (Joel W.), Santa Rosa, CA (USA); Connecticut Univ., Storrs, CT (USA). Apr 1981. 61p. Sponsored by U.S. Department of the Interior. Source: OSTI; U.S. Fish and Wildlife Service, NASA-Slidell Computer Complex, 1010 Gause Blvd., Slidell, LA 70458.

This report provides a historical perspective of a Pacific coast estuarine system – Willapa Bay. The intent of the report is to stimulate estuarine research in an area which is relatively undisturbed. Of particular interest is the importance or value of marshes, tideflats, and eelgrass beds to estuarine fisheries and waterfowl. The research findings as determined for Willapa Bay could be applied to other Pacific Northwest estuaries for coastal problems and decisionmaking. 61 refs., 18 figs., 5 tabs.

49594 (GSF-HY–38/88) **Annual report 1988 of the GSF Institute of Hydrology.** Gesellschaft fuer Strahlen- und Umweltforschung mbH Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Hydrologie. Oct 1989. 271p. (In German). Order Number DE90519861. Source: NTIS (US Sales Only), PC A12/MF A01.

The report contains: (1) Investigation on the migration of pollutants and on groundwater contamination, (2) Precipitation and ground water, (3) Isotope geochemistry, (4) Apparatus and methodological developments, (5) Publications, reports, and lectures. Some papers are individually recorded in the data base. (HP).

49595 (GSF-HY–38/88, pp. 2-8) **Investigation in the propagation of mercury in groundwater of quaternary gravels.** Zahn, M.T.; Seiler, K.P. Gesellschaft fuer Strahlen- und Umweltforschung mbH Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Hydrologie. Oct 1989. (In German). In *Annual report 1988 of the GSF Institute of Hydrology.* Order Number DE90519861. Source: NTIS (US Sales Only), PC A12/MF A01.

The retardation and increased dispersivity in specific materials as caused by sorption and desorption processes in flowing groundwater respectively the uranine tracer are the characteristic features of mercury transport. Mobility of mercury generally goes up as chloride concentrations increase. The column tests were carried through at Dornach near Munich. (DG).

49596 (GSF-HY–38/88, pp. 9-15) **Influence of humic acids on the solubility and sorption characteristics of inorganic cations as exemplified by Cs, Sr, Zr and Nb.** Lang, H.; Wolfrum, C. Gesellschaft fuer Strahlen- und Umweltforschung mbH Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Hydrologie. Oct 1989. (In German). In *Annual report 1988 of the GSF Institute of Hydrology.* Order Number DE90519861. Source: NTIS (US Sales Only), PC A12/MF A01.

The experimental studies demonstrate the influence of natural humic acids on the solubility and sorption characteristics of Cs^{+}, Sr^{2+}, Zr^{4+} and Nb^{5+} through formation of stable complexes. For the investigations, natural sediment and groundwater samples from the surroundings of the Gorleben salt dome were used. The added chemical concentrations of the investigated cations are about 10^{-8} mol/l. (DG).

49597 (GSF-HY–38/88, pp. 16-20) **Determination of diffusion coefficients in cohesive and sandy sediment from the area of Gorleben.** Klotz, D. Gesellschaft fuer Strahlen- und Umweltforschung mbH Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Hydrologie. Oct 1989. (In German). In *Annual report 1988 of the GSF Institute of Hydrology.* Order Number DE90519861. Source: NTIS (US Sales Only), PC A12/MF A01.

The cohesive and sandy sediments stem from shaft driving at the Gorleben salt done. For the cohesive materials, HTD was used as a tracer substance, while $I\text{-}131^{-}$ was used for the sandy materials. Diffusion coefficients of HTD in cohesive materials in their natural texture are in the range of $2x10^{-6}$ to $5x10^{-6}$ cm^2/s, those of $I\text{-}131^{-}$ in the investigated uniform fine and middle sands are approximately $3x10^{-6}$ cm^2/s. (DG).

49598 (GSF-HY–38/88, pp. 75-80) **Low-level tritium measurements in groundwater samples from Stripa-Pluton (Sweden).** Wolf, M.; Moser, H.; Fritz, P. Gesellschaft fuer Strahlen- und Umweltforschung mbH Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Hydrologie. Oct 1989. (In German). In *Annual report 1988 of the GSF Institute of Hydrology.* Order Number DE90519861. Source: NTIS (US Sales Only), PC A12/MF A01.

The investigations in principle confirm that recent ground water (age about 35 years) entered borings in Stripa granite up to 1200 metres deep. A contribution is made towards judging the suitability of granite as an underground storage of radioactive waste. Around the depth of 300/360 metres, ground waters are found to be influenced by tritium from bombs. (DG).

49599 (JOY-LT–16) **The optical parametrization of an aerial multispectral camera.** Silvennoinen, R. Joensuu Univ. (Finland). 1989. 139p. Source: Joensuu Univ, Finland.

This work presents a parametric study of an aerial multispectral camera produced with the aid of small cameras. The effects of the filter, spectrum of light, image motion and vibrations to the resolving power, contrast transfer function and resolution of the multispectral camera under examination are presented in this study. The estimated optical parameters of the aerial multispectral camera under examination are compared with the results from test flights and from practical aerial multispectral photography. Finally, some results of the interpreted variables of natural objects derived from the aerial multispectral pictures produced with the aerial multispectral camera under examination are presented also during the course of this work.

49600 (MIC–90-03223/XAB) **Impact of acidification on the economic value of recreational fishing in eastern Canada. Economic and Commercial Analysis Report No. 14.** Quebec Ministere de l'Environnement, Ste-Foy, PQ (Canada). ©1989. 150p. Source: NTIS, PC EE12/MF E01.

Recreational fishing is one of the most popular outdoor activities in Canada, with direct spending by recreational fishermen generating significant economic activity. There is increasing recognition that acidic precipitation impairs the biological productivity of fish habitat, making game fish more scarce. This study follows a similar report conducted in Quebec using the travel cost method and including a biological variable in the econometric model. The model is based on the relationship, determined by biologists, between the acidity of a body of water and its biological production, measured in biomass per unit of fishing effort. The study included all of Eastern Canada (Ontario, Quebec, the Maritimes). The economic loss related to a decline in biological productivity is represented by a reduction in the number of fishing days and a decline in satisfaction of the remaining users. It is expressed in current dollars per year discounted over 50 years at an annual rate of 10%. The discount reference year is 1988. In total, 5 hypothetical scenarios are evaluated.

49601 (MIC–90-03228/XAB) **Monitoring costs and their implications for direct dischargers in the Ontario mineral industry: Group B, industrial minerals sector.** Ontario Ministry of the Environment, Toronto, ON (Canada). Corporate Resources Div. ©1989. 120p. Source: NTIS, PC EE12/MF E01.

The Municipal-Industrial Strategy for Abatement (MISA) is intended to achieve the virtual elimination of toxic contaminants in municipal and industrial discharges into waterways. Economic assessments are a fundamental component of the MISA program by determining the magnitude of the costs and benefits of various regulations and other program elements, their distribution, and by determining the least-cost mechanisms. This report presents estimates of the incremental costs to industrial minerals plants which are direct dischargers subject to the MISA monitoring regulations. A total of 72 firms with 125 Ontario plant locations are affected, covering cement, chemical lime, clay and shale, graphite, gypsum, magnesium, quarries, sand and gravel and talc. Capital and operating and maintenance costs are estimated by firm for each of sampling requirements, flow measurement, routine analyses, characterization analyses, toxicity testing and reporting.

49602 (MIC–90-03579/XAB) **Chemical use and distribution in the Regina aquifer region. Volume I: Executive Summary – Volume II: Report and appendices.** Saskatchewan Air and Land Protection Branch, Regina, SK (Canada). ©1989. 101p. Source: NTIS, PC EE12/MF E01.

Evaluation of the management and distribution of hazardous chemicals in the Regina aquifer region, as part of an ongoing program to develop a protection plan for the Regina aquifer system. The study involved classifying and estimating the total volume of hazardous chemicals in storage and use; estimating the volume of hazardous chemicals being produced as waste from business and industry; and documenting disposal methods. The survey area included the rural municipalities of Lumsden, Edenwold, Pense, Sherwood and the City of Regina. A total of 169 businesses and institutions participated in completing a questionnaire and conducting a tour of the sites. Estimates of volumes of hazardous chemicals used on-site were provided by the owner or operator representative.

49603 (NIRS-RSD–88) **Radioactivity survey data in Japan, part 1: Environmental materials.** National Inst. of Radiological Sciences, Chiba (Japan). Mar 1990. 25p. Order Number DE90520442. Source: NTIS (US Sales Only), PC A03/MF A01.

The publication is aimed at providing radioactivity survey data in environmental and dietery materials in Japan. Part 1 covers environmental materials, consisting of rain and dry fallout, airborne dust, service water, freshwater, soil, sea water, and sea sediments. Samples were collected from 37 sampling locations during the period between July 1988 and July 1989, and were sent to the Japan Chemical Analysis Center for radiochemical analysis. Strontium 90 and cesium 137 in these environmental materials are tabulated. The maximum concentrations of strontium-90 and cesium-137 were as follows: 0.19±0.074 MBq/Km^2 and 0.63±0.041 MBq/Km^2, respectively, for rain and dry fallout (domestic program); 0.23±0.025 MBq/Km^2 and 0.30±0.031 MBq/m^3 for rain and dry fallout (WHO program); 0.002±0.0016 mBq/m^3 and 0.002±0.0007 mBq/m^3 for airborne dust; 5.4±0.27 mBq and 0.5±0.13 mBq for service water; 5.3±0.25 mBq and 0.8±0.14 mBq for freshwater; and 0.6±0.11 Bq/Kg and 3.1±0.21 Bq/Kg for dried soil. Yearly changes in the concentrations of both strontium-90 and cesium-137 from 1985 through 1989 are given in figures. (N.K.).

49604 (OH/RD–89-296-K) **Canada Brick Quarry ash landfill. Groundwater monitoring and control system modifications, 1989.** Cragg, C.B. Ontario Hydro, Toronto, ON (Canada). Research Div. 11 Dec 1989. 13p. (MICROLOG–90-04000). Source: PC Ontario Hydro Research Division, Records Clerk, Bldg. KR 107, 800 Kipling Ave., Etobicoke, ON, CAN M8Z 5S4; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1. Prices: PC $10.00 CAN; MF $10 CAN.

Fly ash from a thermal generating station is disposed of in an abandoned quarry in Ontario. As part of the licensing agreement for the ash landfill at this site, an underdrainage system was required so that leachate from the landfill could be extracted and treated if the need arose. The system includes a main sump and 2 intermediate sumps. Rehabilitation of the main sump for long-term use and backfilling of the intermediate sumps is described. A network of groundwater monitoring wells was also required under the licensing agreement. Four wells located north of the site to provide background data were rendered inoperable because of housing construction. A description is provided of the installation of new sampling wells in the south end of the landfill. 5 figs., 1 tab.

49605 (OH/RD–89-309-K) **Canada Brick Quarry Ground Water Survey 8th annual report, 1988-1989.** Barber, D.H.; Mlynarczyk, A.Z. Ontario Hydro, Toronto, ON (Canada). Research Div. 15 Dec 1989. 189p. (MICROLOG–90-03996). Source: PC Ontario Hydro Research Division, Editorial Section, 800 Kipling Ave., Toronto, Ont., CAN M8Z 5S4; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1. Prices: PC $10.00 CAN; MF $10 CAN.

Analytic data on ground water samples collected from boreholes in and around an Ontario site used for disposal of fly ash from a thermal power station are reported. Piezometric head measurements, chemical analyses of ground water, major ion balances and Piper diagrams are included. Most of the report consists of numerical data. During 1989, new monitoring wells were installed to replace up-gradient wells destroyed during land development. New wells were also installed in the ash-filled area to provide samples of ash leachate before mixing with infiltrated ground water. A major change in sump water ionic chemistry was noted between September 1988 and May 1989, in which ionic fractions of Mg and carbonate increased and Na and chloride decreased. It was likely that this was caused by mixing of a larger fraction of near-surface ground water rather than deep shale leachate with the ash leachate in the sump than had previously been the case. The ionic chemistry returned to the previous characteristics in September 1989. No adverse effect on the ground water quality due to ash disposal has been observed. 10 refs., 29 figs., 46 tabs.

49606 (PB–90-234311/XAB) **Best demonstrated and available technology (BDAT) background document for wastes from the production of epichlorohydrin K017. Final report.** Kinch, R.; Eby, E. Versar, Inc., Springfield, VA (USA). May 1990. 51p. Source: NTIS, PC A04/MF A01.

See also Volume 3, PB–90-234303 and Volume 5, PB–90-234329; Also available in set of 19 reports PC E99/MF E99, PB–90-234279.

The background document provides the Agency's rationale and technical support for selecting the constituents for regulation in K017 and for developing treatments standards for these constituents. The document also provides waste characterization data that serve as a basis for determining whether a variance from a treatment standard may be warranted for a particular type of K017 that is more difficult to treat than the wastes that were analyzed in developing the treatment standards for K017.

49607 (PB–90-234519/XAB) **Final response to BDAT related comments document: D001. Volume 1-B.** Rosengrant, L.; Craig, R. Environmental Protection Agency, Washington, DC (USA). Office of Solid Waste. May 1990. 200p. (EPA–530/SW-90/061D). Source: NTIS, PC A09/MF A02.

See also Volume 1-A-3, PB–90-234501 and Volume 1-C, PB–90-234527; Also available in set of 19 reports PC E99/MF E99, PB–90-234477.

The contents of this article include the following: treatment issues concerning aqueous wastes in the ignitable liquids subcategory; other issues concerning treatment standards for the ignitable liquids subcategory; treatment standard for ignitable compressed gases; issues concerning deactivation treatment standards; definitions of subcategories; and dilution.

49608 (PB–90-234618/XAB) **Final response to BDAT related comments document. K071 and K106: Mercury cell process wastes K086: Residues from ink production wastes containing cyanide. Volume 1-L.** Rosengrant, L.; Craig, R. Environmental Protection Agency, Washington, DC (USA). Office of Solid Waste. May 1990. 251p. (EPA–530/SW-90/061N). Source: NTIS, PC A12/MF A02.

See also Volume 1-K, PB–90-234600 and Volume 1-M, PB–90-234626. Also available in set of 19 reports PC E99/MF E99, PB–90-234477.

The contents of this article include the following: mercury cell process wastes (data submission only, thermal recovery standard-demonstrability, treatment standard for k071 and k106 wastewater, multimedia impacts, stabilization as bdat option, retain existing bdat standard for k071 nonwastewater, reconsideration of retort cutoff level, and indigenous waste); chlorinated hydrocarbon wastes (no comments were received for this waste code); residues from ink production (treatment standards, subcategories, total chromium vs hexavalent chromium, mixture and derived-from rule, and soft hammer); waste leaching solution from acid leaching of emission control dust/sludge from secondary lead smelting (no comments were received for this issue); and wastes containing cyanide (analytical methodology, bdat, treatment standards, and soil/debri).

49609 (PB–90-234709/XAB) **Background document for Third Third wastes to support 40 CFR part 268 land-disposal restrictions. Final rule. Third Third waste volumes, characteristics, and required and available treatment capacity. Volume 3. Chapter 4. Appendix A-Appendix I.** Environmental Protection Agency, Washington, DC (USA). Office of Solid Waste. May 1990. 262p. (EPA–530/SW-90/062C). Source: NTIS, PC A12/MF A02.

See also Volume 2, PB–90-234691 and Volume 4, PB–90-234717. Also available in set of 4 reports PC E99/MF E99, PB–90-234675.

The section of the background document presents a detailed discussion of the methodology (approach) and rationale for the capacity analyses supporting the final rule.

49610 (PB–90-240912/XAB) **US Mussel Watch Program: Transuranic element data from Woods Hole Oceanographic Institution 1976-1983. Technical report.** Palmieri, J.; Livingston, H.; Farrington, J.W. Woods Hole Oceanographic Institution, MA (USA). Coastal Research Center. May 1984. 82p. Contract EPA-68-03-3193. (WHOI–84-28). Source: NTIS, PC A05/MF A01.

Bivalves (Mytilus edulis, Mytilus californianus, Crassostrea virginica and Ostrea equestris) were collected once per year during 1976, 1977, and 1978 along the United States coast and analyzed for (239,240)Pu, (241)Am and (137)Cs as part of the U.S. Mussel Watch program. Monthly samples were collected during 1976-1980 from Narragansett Bay, Rhode Island and Bodega Head, California and analyzed for (239,240)Pu, (241)Am, and (137)Cs. There is no evidence in the data for systematic regional or local elevated concentrations of radionuclides as a result of releases from the nuclear fuel cycle. Monthly fluctuations in radionuclide concentrations in the Narragansett Bay mussels appear to be primarily influenced by spawning.

49611 (PB–90-247164/XAB) **Health assessment for Landfill and Development Company, Mount Holly, New Jersey, Region 2. CERCLIS No. NJD048044325. Final report.** New Jersey Dept. of Environmental Protection, Trenton, NJ (USA). Div. of Science and Research. 20 Jun 1990. 13p. Source: NTIS, PC A03/MF A01.

Landfill and Development Company (L & D) is currently on the National Priorities List (NPL). The L & D is located within Mt. Holly, Eastampton, and Lumberton Townships, in Burlington County, New Jersey. L & D has a history of poor landfill operation and odor complaints (NJDEP, Interim Background Investigation Report). NJDEP has been involved with the permitting, inspection, and regulation of L & D since 1970. On the basis of the information reviewed, the Landfill and Development Site is a potential public health concern because humans may be exposed to hazardous substances at concentrations that may result in adverse health effects. As noted in the Human Exposure Pathways section, human exposure to metals may occur (and may have occurred in the past) via dermal contact, surface waters, and groundwater. The groundwater and surface water sediment at the L & D site have been contaminated with VOCs and metals. The groundwater contamination may potentially extend off-site to nearby potable wells, although neither private nor municipal well sampling performed recently revealed site-related contaminants in any water supplies.

49612 (PB–90-249616/XAB) **Discharge of waste water from CERCLA sites into POTWS. Directive (Final).** Environmental Protection Agency, Washington, DC (USA). Office of Emergency and Remedial Response. 15 Apr 1986. 8p. (EPA–9330.2-04). Source: NTIS, PC A02/MF A01.

The directive addresses the concerns and issues unique to publicly owned treatment works (POTWs) that must be evaluated before the discharge of CERCLA wastewater to a POTW.

49613 (PB–90-250176/XAB) **Waste-minimization opportunity assessment, Fort Riley, Kansas. Summary report, April 1989-December 1989.** Drabkin, M.; Bridges, J.S. Versar, Inc., Springfield, VA (USA). Jul 1990. 133p. Contract EPA-68-C8-0061. Source: NTIS, PC A07/MF A01.

Under the Waste Reduction Evaluations at Federal Sites (WREAFS) Program, a waste minimization opportunity assessment was conducted at a maintenance operation carried out at one of the U.S. Army Forces Command (FORSCOM) Fort Riley, Kansas facilities. These facilities generate waste battery acid and metals-contaminated alkaline wastewaters. The waste minimization assessment developed two recycling options for these RCRA wastes: (1) Filtration, restrengthening and recycling of waste battery acid as a replacement for virgin battery acid and, (2) purification and reuse of alkaline detergent solution for automotive parts cleaning. The payback periods for these two waste reduction options are very short and create the potential for application of similar waste minimization options in at least ten other U.S. Army FORSCOM installations.

49614 (PB–90-250382/XAB) **Health assessment for Elizabethtown Landfill, Elizabethtown, Lancaster County, Pennsylvania, Region 3. CERCLIS No. PAD980539712. Final report.** Agency for Toxic Substances and Disease Registry, Atlanta, GA (USA). 11 Dec 1989. 15p. Source: NTIS, PC A03/MF A01.

The Elizabethtown Landfill is a National Priorities List Update 7 site located approximately 1 mile southeast of Elizabethtown in Lancaster County, Pennsylvania. The landfill is currently closed but was operated between 1958 and 1973 for the disposal of industrial and municipal wastes. The current owner and occupant of the site is Waste Management, Inc. (WMI). Remedial activities at the site have included the installation of a leachate collection system, the construction of a sedimentation pond, the installation of a soil gas collection system and flare, and the regrading and capping of the site. Low concentrations of several volatile organic compounds (VOC's) were detected in groundwater samples that were recently collected (1988) from on-site and off-site wells. Private wells with known contamination are not currently being used for drinking water. However, the use of VOC-contaminated water for nonpotable indoor use may lead to VOC inhalation exposures. Workers at the WMI buildings may also be exposed to other landfill gases that escape into the building from the underlying landfill. Potential health risks resulting from exposures to ambient air and the consumption of off-site plants and animals cannot be assessed because of the absence of supporting analytical data.

49615 (PB–90-250424/XAB) **Health assessment for Fletcher's Paint Works and Storage Facility Hazardous Waste Material, Milford, Hillsborough County, New Hampshire, Region 1. CERCLIS No. NHD981067614. Preliminary report.** New Hampshire Dept. of Health and Human Services, Concord, NH (USA). Environmental Health Risk Assessment Unit. 11 Jun 1990. 14p. Source: NTIS, PC A03/MF A01.

Fletcher's Paint Works and Storage Facility Hazardous Waste Site (Fletcher's Paint Site) in Milford, New Hampshire, consists of three distinct entities: Fletcher's Paint Works at 21 Elm Street, Fletcher's Paint Storage Facility on Mill Street, and a drainage ditch leading from the storage facility property to Hampshire Paper Company property. The aggregation of these three properties was based on the similar nature of operations and wastes, the close proximity of the areas, the same target population, and the same underlying aquifer at risk of contamination. The aggregated site has contributed to the contamination of soil, groundwater, surface water, sediment, and air with various volatile organic chemicals (VOCs), semivolatile organic chemicals (SVOCs), heavy metals, and polychlorinated biphenyls (PCBs). Environmental monitoring related to the Fletcher's Paint Site has consisted of sampling of the Keyes Well by the NH WSPCC, and sampling at the paint works, storage facility and drainage ditch by NUS Corporation and EPA's Environmental Services Division (ESD). Contaminant levels at each location is discussed individually. Based upon the available information, the Fletcher's Paint NPL Site is considered to be of potential public health concern because of the risk to public health caused by potential exposure to hazardous substances, such as VOCs, PCBs, PAHs, and heavy metals, at concentrations that may result in adverse health effects. Exposure to contaminated soil and surface water, and potentially contaminated fish may be occurring. The site is located in a densely populated part of town, while the storage facility is readily accessible to children walking to and from school.

49616 (PB–90-250432/XAB) **Health assessment for South Municipal Water Supply Well, Hillsborough County, Peterborough, Cheshire County, New Hampshire, Region 1. CERCLIS No. NHD980671069. Final report.** New Hampshire Dept. of Health and Human Services, Concord, NH (USA). Environmental Health Risk Assessment Unit. 16 May 1990. 30p. Source: NTIS, PC A03/MF A01.

See also PB–90-137837.

The South Municipal Water Supply Well Site is on the U.S. Environmental Protection Agency's (EPA) National Priorities List (NPL). The site area is in a rural portion of the Contoocook River Valley approximately two miles south of downtown Peterborough, New Hampshire. The site consists of two areas: the South Well, located approximately 350 feet east of the Contoocook River, and the New

Hampshire Ball Bearing Inc. (NHBB) manufacturing facility and associated property. Improper disposal practices at NHBB led to contamination of on-site soil, groundwater, and surface water from volatile organic compounds (VOCs), and contamination of sediment from VOCs, metals, polychlorinated biphenyls (PCBs) and polynuclear aromatic hydrocarbons (PAHs). It is not presently clear whether soil contaminants are volatilizing into the ambient air. Off-site contamination includes low levels of VOCs in surface water, PCBs and PAHs in sediments, and VOCs in groundwater. Based on the information reviewed, the authors have concluded that the South Municipal Water Supply Site is of potential public health concern under current conditions because of the potential risk to human health resulting from possible exposure to hazardous substances at concentrations that may result in adverse health effects.

49617 (PB–90-250440/XAB) **Health assessment for Tex Tin Corporation, National Priorities List Site, Texas City, Texas, Region 6. CERCLIS No. TXD062113329. Preliminary report.** Agency for Toxic Substances and Disease Registry, Atlanta, GA (USA). 16 May 1990. 20p. Source: NTIS, PC A03/MF A01.

The Tex Tin Corporation facility, formerly Gulf Chemical and Metallurgical Corporation, is a proposed National Priorities List site located in Texas City, Galveston County, Texas. Tex Tin previously operated as a primary tin smelter, but currently operates as a copper smelter. Significant concentrations of metals (antimony, arsenic, barium, cadmium, chromium, copper, lead, manganese, mercury, nickel, silver, tin, and zinc) have been detected on-site in surface water, groundwater, and soil. Significant concentrations of metals (arsenic, cadmium, chromium, lead, nickel, and tin) have also been detected in ambient air samples collected off-site. Some remediation activities have occurred on-site including the closure of a 19-million-gallon ferric chloride pond and the removal of approximately 4,000 drums containing radioactive material. The Tex Tin site poses a potential public health concern for on-site workers, residents living in nearby neighborhoods, and possibly for a limited number of residents on private wells located within approximately one mile of the site.

49618 (PB–90-252396/XAB) **Illinois water-quality report, 1988-1989. Final report.** Illinois Environmental Protection Agency, Springfield, IL (USA). Div. of Water Pollution Control. Apr 1990. 372p. (IEPA/WPC–90-160). Source: NTIS, PC A16/MF A02.

See also PB–88-223342. Color illustrations reproduced in black and white.

The State of Illinois report, prepared by the Illinois Environmental Protection Agency, addresses the water quality assessment efforts for 1988 and 1989 (the seventh in a series of biennial reports). The report follows USEPA guidance for reporting water quality conditions in terms of degree of use support or attainment. In addition to stream and lake water quality conditions, discussions of the State's wetland resources and groundwater protection programs are provided. Also included are the lake classification and lake information required by Section 314 and nonpoint source assessments required by Section 319.

49619 (PB–90-253659/XAB) **Health assessment for Tri-City Industrial Disposal Site, Brooks, Kentucky, Region 4. CERCLIS No. KYD981028350. Preliminary report.** Agency for Toxic Substances and Disease Registry, Atlanta, GA (USA). 18 Jul 1990. 19p. Source: NTIS, PC A03/MF A01.

The Tri-City Industrial Disposal site, located in Bullitt County near Brooks, Kentucky, has been added to the National Priorities List (NPL) by the U.S. Environmental Protection Agency. The site, a landfill, occupies 12 acres and includes one, and possibly two, residences constructed on the filled area. For purposes of the Preliminary Health Assessment, the on-site area is considered to include two residences. Results of a Site Investigation, conducted in 1986 as part of the NPL site nomination protocol, and two follow-up studies have identified heavy metals and volatile and semivolatile organic compounds in the wastes, soils (surface and subsurface), sediment, and groundwater. Additional information is needed to evaluate more fully releases, migration, contaminant levels at points of potential human exposure.

49620 (PB–90-253667/XAB) **Health assessment for GBF, Inc., Dump, Antioch, Contra Costa County, California, Region 9. CERCLIS No. CAD980498562. Preliminary report.** Agency for Toxic Substances and Disease Registry, Atlanta, GA (USA). 18 Jul 1990. 13p. Source: NTIS, PC A03/MF A01.

The GBF, Inc., Dump site was proposed for the National Priorities List by Update 7. The site is located in Antioch, Contra Costa County, California. The site is currently being operated as a sanitary landfill, but it was used previously for the disposal of chemical wastes. On-site groundwater is contaminated with high concentrations of volatile organic compounds. The extent of off-site groundwater contamination has not been determined. Although the area surrounding the site is serviced by a public water system, several private wells located downgradient of the landfill are used for potable and nonpotable purposes. No contamination of private wells has been reported. Ambient air monitoring at the site has not detected concentrations of air contaminants that pose significant health concerns.

49621 (PB–90-253675/XAB) **Health assessment for Cinnaminson Township (Block 702) Ground-Water Contamination, Cinnaminson, Burlington County, New Jersey, Region 2. CERCLIS No. NJD980785638. Final report.** New Jersey State Dept. of Health, Trenton, NJ (USA). 30 Jul 1990. 12p. Source: NTIS, PC A03/MF A01.

The Phase I Remedial Investigation of the Cinnaminson Groundwater Contamination Study Area was completed in August 1989. The objectives of the Health Assessment, based on the stage of the remediation of the site, are to: assess potential current and past health effects that may be associated with the site; identify, if necessary, additional exposure and sampling locations; identify, if necessary, any actions that could be taken to prevent or minimize exposure to contamination associated with the site; document the concerns of the community with respect to the public health implications of the site; identify information or data gaps relating to the site; and assess whether further health study or evaluation of the site is warranted.

49622 (PB–90-253683/XAB) **Health assessment for Rose Hill Regional Landfill, South Kingstown, Rhode Island, Region 1. CERCLIS No. RID980521025. Preliminary report.** Agency for Toxic Substances and Disease Registry, Atlanta, GA (USA). 18 Jul 1990. 12p. Source: NTIS, PC A03/MF A01.

The Rose Hill Regional Landfill site, South Kingstown, Rhode Island, was placed on the National Priorities List (NPL) by the U.S. Environmental Protection Agency (EPA). Part of this approximately 70-acre site is owned by the town of South Kingstown and part is owned by a private citizen. The site consists of three separate, inactive disposal areas–a solid waste landfill, a bulky waste disposal area, and a sewage sludge landfill. Disposal operations began in 1967 and ceased in 1983. Ground water has been affected; and municipal water has been extended to most residents in the vicinity of the site. As noted in the Human Exposure Pathways Section, human exposure to heavy metals and VOCs may occur and may have occurred in the past via ingestion of contaminated ground water.

49623 (PB–90-253709/XAB) **Health assessment for Occidental Chemical Corporation Site, Lower Pottsgrove Township, Montgomery County, Pennsylvania, Region 3. CERCLIS No. PAD980229298. Preliminary report.** Agency for Toxic Substances and Disease Registry, Atlanta, GA (USA). 24 Jul 1990. 15p. Source: NTIS, PC A03/MF A01.

The Occidental Chemical Corporation Site, located in Lower Pottsgrove Township, Montgomery County, Pennsylvania, has been included on the U.S. Environmental Protection Agency's National Priorities List. Several organic compounds and heavy metals, including vinyl chloride, trichloroethene (TCE), arsenic, and chromium, have been detected in on-site monitoring wells and sediment. On-site process wells have also been contaminated with vinyl chloride, trans-1,2-dichloroethene, and TCE. The contamination is apparently emanating from the landfills and lagoons. The site is considered to be of potential public health concern because humans may be exposed to hazardous substances at concentrations that may result in adverse health effects over time; however, no indication presently exists that exposure to contaminants found at the site is occurring.

49624 (PB–90-253717/XAB) **Health assessment for Imperial Oil Co., Inc./Champion Chemicals, Marlboro Township, Monmouth County, New Jersey, Region 2. CERCLIS No. NJD980654099. Final report.** New Jersey State Dept. of Health, Trenton, NJ (USA). 30 Jun 1990. 15p. Source: NTIS, PC A03/MF A01.

The Imperial Oil Company/Champion Chemical (IOC) is an oil blending and recovery facility. Imperial Oil was engaged in the custom blending of lubricants, primarily for the military. The IOC site and its immediate surroundings have demonstrable contamination of soils, surface water, sediments, and groundwater. Among the contaminants are PCBs, arsenic, lead, trichloroethylene, phthalates, and total petroleum hydrocarbons. Public health concerns center around the impact of contamination on area water supply, surface water discharge into recreational areas, and exposure of local residents and workers to contaminated soils.

49625 (PB–90-253725/XAB) **Health assessment for Radiation Technology, Inc., Rockaway, Morris County, New Jersey, Region 2. CERCLIS No. NJD047684451. Final report.** New Jersey Dept. of Environmental Protection, Trenton, NJ (USA). 30 Jul 1990. 13p. Source: NTIS, PC A03/MF A01.

Radiation Technology, Incorporated (RTI) is currently on the National Priorities List. The RTI property is located at 108 Lake Denmark Road, in Rockaway Township, Morris County, New Jersey. Beginning in 1980, the New Jersey Department of Environmental Protection (NJDEP) and the Rockaway Township Health Department (RTHD) conducted numerous facility and area inspections of the RTI site. NJDEP undertook a Remedial Investigation/ Feasibility Study (RI/FS) in 1986. Groundwater sampling results from Phase I of RI/FS revealed excessive amount of VOCs in the RTI study area. The potential human exposures may include ingestion of the VOCs-contaminated well water, dermal absorption and/ or inhalation from cleaning or showering activities.

49626 (PB–90-253733/XAB) **Health assessment for Ewan Property, Shamong Township, Burlington County, New Jersey, Region 2. CERCLIS No. NJD980761365. Final report.** New Jersey State Dept. of Health, Trenton, NJ (USA). 30 Jul 1990. 13p. Source: NTIS, PC A03/MF A01.

The Remedial Investigation (RI) and the Feasibility Study (FS) of the Ewan Property site have been completed. A Record of Decision (ROD) was signed on September 29, 1988. The alternative that will be used to remediate the site has been discussed with concerned citizens at a public meeting in August 1988. At this stage of the study the objectives of the Health Assessment are to: assess the potential current and past effects of the site on public health, evaluate if the selected remedial alternative adequately addresses public health issues, identify any information or data gaps, evaluate if implementation of the remedial alternative could potentially adversely impact public health, identify and recommend immediate actions that could be taken to reduce the public health impacts of the site and site remediation, and assess whether a health study of the site is indicated.

49627 (PB–90-253741/XAB) **Health assessment for Intersil, Inc./Siemens Components, Cupertino, Santa Clara County, California, Region 9. CERCLIS No. CAD041472341. Preliminary report.** Agency for Toxic Substances and Disease Registry, Atlanta, GA (USA). 18 Jul 1990. 13p. Source: NTIS, PC A03/MF A01.

The Intersil, Inc./Siemens Components site was proposed for the National Priorities List by the Update 7 list. The site is located in Cupertino, Santa Clara County, California. The site consists of two adjacent facilities that manufactured semiconductors. Waste solvents from the facilities have contaminated on-site soils and the underlying aquifer. High concentrations of several volatile organic compounds (VOCs) were detected in groundwater from on-site monitoring wells. The use of VOC-contaminated water in the home could lead to exposures by ingestion, inhalation, or dermal contact. Low concentrations of VOCs were detected in water from one well used by the Santa Clara municipal water system. However, the concentrations of contaminants in water from this well do not pose a significant health risk. The site is of potential public health concern because of possible human exposure to site-related hazardous substances. However, there are no data to indicate that the public is currently being exposed to site-related contaminants at levels of health concern.

49628 (PB–90-254293/XAB) **Superfund Record of Decision (EPA Region 1): New Bedford, MA. (First remedial action), March 1990.** Environmental Protection Agency, Washington, DC (USA). Office of Emergency and Remedial Response. 6 Apr 1990. 251p. (EPA/ROD/R–01-90/045). Source: NTIS, PC A12/MF A02.

The New Bedford site is a harbor area in the port city of New Bedford, Massachusetts, approximately 55 miles south of Boston. Two electrical capacitor manufacturing facilities, the Aerovox facility and the Cornell-Dubilier Electronics facility, are located along the New Bedford Harbor and, were major PCB users from the 1940s to 1978, when EPA banned the use of PCBs. These manufacturers released PCB-contaminated wastewater onto shoreline mudflats and into the harbor. As a result of the widespread PCB contamination, the State closed three fishing areas in the harbor in 1979, resulting in the loss of approximately 18,000 acres of productive lobstering ground. Between 1982 and 1985, EPA and the Coast Guard posted warnings notifying the public of fishing and swimming restrictions. The site has been divided into three study areas which include the Hot Spot area, the Acushnet River Estuary, and the Lower Harbor and Upper Buzzards Bay. This Record of Decision (ROD), the first of two operable units, is an interim remedy and addresses the 5-acre Hot Spot area, located along the western bank of the Acushnet River Estuary adjacent to the Aerovox facility.

49629 (PB–90-254301/XAB) **Superfund Record of Decision (EPA Region 3): C and R Battery, VA. (First remedial action), March 1990. Final report.** Environmental Protection Agency, Washington, DC (USA). Office of Emergency and Remedial Response. 30 Mar 1990. 65p. (EPA/ROD/R–03-90/085). Source: NTIS, PC A04/MF A01.

The 11-acre C and R Battery site is a former battery-sawing and shredding facility in Chesterfield County, Virginia. Open fields and woods border the site on the north, south, and west, a small fuel oil distributor borders the site on the east, and the James River is approximately 650 feet north of the site. From the early 1970s to 1985 the facility was used to recycle discarded batteries. Site operations included draining battery acids into onsite ponds, recovering and stockpiling lead and lead compounds from the batteries, and shredding and stockpiling battery casings onsite. The State began monitoring the site in the late 1970s and detected elevated lead levels in the soil, surface water, and ground water. The selected remedial action for this site includes the demolition of a concrete pad and dismantlement of a storage shed followed by offsite disposal of the debris, and offsite treatment, if necessary, of surface water from the drainage ditch prior to the excavation of contaminated soil and sediment.

49630 (PB–90-254319/XAB) **Superfund Record of Decision (EPA Region 3): Westline, PA. (First remedial action) (amendment), March 1990.** Environmental Protection Agency, Washington, DC (USA). Office of Emergency and Remedial Response. 30 Mar 1990. 11p. (EPA/ROD/R–03-90/086). Source: NTIS, PC A03/MF A01.

See also PB–87-183786.

The Westline site is a former chemical plant in the rural community of Westline, LaFayette Township, McKean County, Pennsylvania. The Day Chemical Company deposited tar material containing phenolic compounds and PAHs into onsite lagoons and into small canals to allow the tar material to migrate downhill towards the banks of Kinzua Creek. Although a 1986 Record of Decision (ROD) addressed the remediation of an additional 2,340 tons of tar and soil found in an onsite tar pit and in some of the interpersed tar deposits along Kinzua Creek, there was still an estimated 4,000 tons of tar material left at the site in the areas planned for excavation. Most of the remaining tar, however, is three feet below the surface and is not a dermal contact threat. The selected remedial action for the ROD amendment is no further action.

49631 (PB–90-254335/XAB) **Superfund Record of Decision (EPA Region 2): Roebling Steel, NJ. (First remedial action), March 1990.** Environmental Protection Agency, Washington, DC (USA). Office of Emergency and Remedial Response. 29 Mar 1990. 97p. (EPA/ROD/RO–2-90/100). Source: NTIS, PC A05/MF A01.

The 200-acre Roebling Steel site is a former steel wire and cable manufacturing facility in the village of Roebling, Florence Township, Burlington County, New Jersey. From 1906 to 1982, the facility was operated primarily to produce steel products, but in recent years, portions of the site have been used for various other industrial operations that have resulted in the onsite generation, storage, or burial of raw materials and wastes. From 1987 to 1988, EPA performed a second removal action. These areas include the remaining drums and exterior tanks, transformers containing PCB-contaminated oils, a baghouse dust pile, chemical piles, tires, and the soil under the water tower in Roebling Park.

49632 (PB–90-257494/XAB) **Health assessment for Waste Engineering, Inc., Sanitary Landfill, Andover, Minnesota, Region 5. CERCLIS No. NMD9806091192 (amended). Final report.** Agency for Toxic Substances and Disease Registry, Atlanta, GA (USA). 26 Apr 1988. 12p. Source: NTIS, PC A03/MF A01.

See also PB–90-100306.

Waste Disposal Engineering Inc. Sanitary Landfill (WDE), is an NPL site located 20 miles north of Minneapolis in the City of Andover. The 173-acre site was used to landfill municipal refuse and industrial wastes. Volatile organic compounds and lime sludge are the predominant contaminants present at the landfill. The area immediately around the site is characterized by low density housing, agriculture, and some commercial development. The remedial action proposed in the Record of Decision (ROD) will address Agency for Toxic Substances and Disease Registry (ATSDR's) major health concerns for the site. However, prior to cap completion, there is public health concern regarding inhalation and dermal absorption of lime sludge (particularly to the fugitive dust generated) and vapors, as well as ingestion exposure to the lime sludge.

49633 (PB–90-257809/XAB) **Radon-removal techniques for small community public water supplies.** Kinner, N.E.; Malley, J.P.; Clement, J.A.; Quern, P.A.; Schell, G.S. New Hampshire Univ., Durham, NH (USA). Aug 1990. 270p. Source: NTIS, PC A12/MF A02.

The report presents the results of an evaluation, performed by the University of New Hampshire–Environmental Research Group (ERG), of radon removal in small community water supplies using full-scale granular activated carbon adsorption, diffused bubble aeration and packed tower aeration. Various low technology alternatives, such as loss in a distribution system and addition of coarse bubble aeration to a pilot-scale atmospheric storage tank were also evaluated. The report discusses each of the treatment alternatives with respect to their radon removal efficiency, potential problems (i.e., waste disposal, radiation exposure and intermedia pollution), and economics in small community applications. In addition, several sampling methods, storage times, scintillation cocktails and extraction procedures currently used in the liquid scintillation technique for analysis of radon in water were compared.

49634 (QMLCP/SAEF–90-01788) **Determination of the acid level of weakly mineralized waters.** St-Pierre, M. Quebec Ministere du Loisir, de la Chasse et de le Peche, PQ (Canada). Service de l'Amenagement et de l'Exploitation de la Faune. Sep 1988. 20p. (MICROLOG–90-01788). Source: PC Ministere du loisir, de la chasse et de la peche du Quebec, Direction des communications, 150, St-Cyrille Blvd. E., Quebec, PQ, CAN G1R 4Y1; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1. Prices: PC PRICES UPON REQUEST; MF $10 CAN.

This report is a manual on how to measure the pH of weakly mineralized waters. It is more practical than theoretical. The aspects covered are: definition of the pH value, measuring methods, Nernst equation, and types of electrodes; problems specific of the measurement of the pH in weakly mineralized solutions; manufacturing of buffer solutions; treatment and transportation of samples; how to deal with the electrodes; and the calibration and use of the pH-meter. In conclusion, though pH measurement is not a complex operation, the procedural rules are to be followed rigorously; it is then possible to reach a measurement uncertainty of ± 0.1 to 0.2 pH units. A list of pH-meter manufacturers and retailers is appended to the report. 6 refs.

49635 (RRTAC–89-2-Vol.1, pp. 279-287) **Productivity of agronomic and native plants under various fertilizer and seed application rates on a simulated transport corridor, Fort Norman, Northwest Territories.** Evans, K.E. (Nova Corp. of Alberta, Calgary, AB (Canada)); Kershaw, G.P. Alberta Land Conservation and Reclamation Council, Edmonton, AB (Canada). Reclamation Research Technical Advisory Committee. 1989. (CONF-890807–: Symposium on reclamation: a global perspective, Calgary (Canada), 27-31 Aug 1989; MICROLOG–90-03281). In *Proceedings of the conference Reclamation, a global perspective: Volume 1.* Source: PC Alberta Queen's Printer, Publications Office, 11510 Kingsway Ave, Edmonton, AB, CAN T5G 2Y5; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1. Prices: PC $10.00 CAN; MF $10 CAN.

In spring 1987, a reclamation study was initiated on an east-west oriented right-of-way, cleared in a decadent, subarctic black spruce forest. The objective was to test the short-term effects of various rates of fertilizer and seed application on the productivity of agronomic (commercially-available) and native plants. The 25m-wide right-of-way was disturbed by 1800 passes of an all-terrain-cycle over a 70m length. The site was seeded and fertilized using a seed mix and fertilizer similar to that employed in other northern reclamation projects. Phytomass of native graminoids, native herbaceous and agronomic seed-mix species, increased after the first and second growing seasons. The average increase in native species phytomass from 1987 to 1988 was 573% in unseeded treatments. Within seeded treatments the average increase in native plant production was 346%. The average increase in agronomic seed-mix phytomass was 454% over the two growing seasons of the study, with the highest productivity occurring in those treatments in which 500 and 1000 kg/hectare of fertilizer were applied. 38 refs., 3 figs., 5 tabs.

49636 (VYH-JULK–22) **Pollution load on the gulf of Finland in 1982-1984.** Pitkaenen, H.; Puolanne, J.; Pietarila, M.; Laeaene, A.; Loigu, E.; Kuslap, P.; Raia, T. National Board of Waters and the Environment, Helsinki (Finland). 1988. 29p. Source: National Board of Waters and the Environment, Helsinki, Finland.

A Report of the Finnish-Soviet Working Group on the Protection of the Gulf of Finland.

The report presents estimated figures and discussion on the pollution load discharged into the Gulf of Finland from direct point sources and via rivers and the atmosphere. The work has been compiled as a co-operation of scientists and experts from Finland and the USSR under the Finnish-Soviet Working Group on the Protection of the Gulf of Finland. During 1982-1984 the Gulf of Finland received on an average 6 800 t a^{-1} of phosphorus, 130 000 t a^{-1} of nitrogen and 410 000 t a^{-1} of organic matter as BOD_7. The figures for BOD and phosphorus were 8 and 18% higher than during 1980-1981, respectively. The increase was largely due to increased water flows in the Soviet rivers, especially in the River Neva. Discharges of nitrogen did not increase markedly during the 1980's. The present values probably underestimate the actual nutrient loading, mostly due to methodological difficulties in assessing discharges from Leningrad which evidently is the most significant individual anthropogenic source of loading by the Gulf of Finland. In spite of water protection measures and improved waste water Treatment in both countries, the total load to the Gulf of Finland increased during the period 1975-1984, due to increased water flows of rivers and increased leaching from land. In the future it is important to pay attention to discharges of harmful substances and the role of atmospheric loading, as well as to the origins and behaviour of riverine discharges. Direct loading discharged into the estuaries should be monitored separately from the riverine load whenever this is possible.

49637 Vapor-phase measurements of volatile organochlorides using fiber optics. Langry, K.C. (Lawrence Livermore National Laboratory, CA (USA)); Angel, S.M. pp. 29, Paper ANYL 94 of American Chemical Society, Division of Analytical Chemistry. American Chemical Society, Washington, DC (US) (1990). (CONF-900402–: 199. national meeting of the American Ceramic Society, Boston, MA (USA), 22-27 Apr 1990).

Recently, a new type of optorde was developed for the purpose of measuring volatile organochlorides in contaminated groundwater. This device shows dramatically improved performance over previously reported fluorescence-based sensors. The new optrode measurement is based on the absorption of light by a colorimetric indicator that is placed in a 20-ul capillary tube at the end of the optical fiber cable. The analyte is measured in the vapor phase as it diffuses across a membrane and reacts with the optrode reagent, producing a highly colored product that absorbs light at 530 nm.

49638 Fiber optic spectrochemical emission sensor: A detector for chlorinated and fluorinated compounds. Olsen, K.B. (Pacific Northwest Laboratory, Richland, WA (USA)); Griffin, J.W.; Matson, B.S.; Kiefer, T.C.; Flynn, C.J. pp. 59, Paper ANYL 195 of American Chemical Society, Division of Analytical Chemistry. American Chemical Society, Washington, DC (US) (1990). (CONF-900402–: 199. national meeting of the American Ceramic Society, Boston, MA (USA), 22-27 Apr 1990).

A new chlorine- and fluorine-specific, fiber optic spectrochemical emission sensor (FOSES) has been designed and fabricated at the Pacific Northwest Laboratory. The FOSES is currently designed for real-time in-situ detections of chlorinated and fluorinated hydrocarbons in a field environment. The sensor system design incorporates a RF excitation source, a metered sub-atmospheric pressure helium supply, a critical orifice air inlet, a fiber optic umbilical to transmit analyte emissions to a optical detection system, and a central detection/data acquisition system.

49639 Direct determination of nitrification in marine waters by using the short-lived radioisotope of nitrogen, ^{13}N. Capone, D.G. (Center for Environmental and Estuarine Studies, Solomons, MD (USA)); Horrigan, S.G.; Dunham, S.E.; Fowler, J. *Applied and Environmental Microbiology (USA)*, 56(4): 1182-1184 (Apr 1990).

Biological oxidation of radiolabeled $^{13}NH_4^+$ (half-life = 10 min) was observed within minutes in assays of an estuarine ammonium oxidizer and in natural populations of nitrifiers in coastal waters. Our estimates of turnover of the ammonium pool and rates of nitrification based on experiments using ^{13}N are consistent with previous values in the literature based on longer-term ^{15}N tracer experiments or on indirect methods and thus provide corroboration for the estimates by other researchers.

49640 (PNL-SA–17865) **The ecology of elk in an arid environment: An overview of the Hanford elk project.** McCorquodale, S.M (Yakima Indian Nation, Toppenish, WA (USA). Wildlife Resource Management); Eberhardt, L.E. Pacific Northwest Lab., Richland, WA (USA). Aug 1990. 21p. Sponsored by California Fish and Game Department. DOE Contract AC06-76RL01830. (CONF-9005269–1: Western states and provinces workshop, Eruka, CA (USA), 15-17 May 1990). Order Number DE90017646. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

We studied elk (Cerves elaphus) in Washington's shrub-steppe region from 1982 to the present. The population originated from a small number of colonizers that took up residence on the Hanford Site in winter 1972–73. Rapid population growth was facilitated by high reproductive and survival rates. Elk showed strong preferences for bedding in sagebrush (Artemisia tridentata) stands, the only vegetative cover available. Foraging elk typically selected previously burned habitats that no longer supported sagebrush. Elk limited their major diurnal activity, favoring dusk-to-dawn foraging with relatively high nocturnal activity levels. Elk diets were dominated by grasses from winter through early summer and by forbs during the summer drought period. High reproductive success and survival and superior antler growth relative to elk occupying more mesic environments suggested that these elk were effectively utilizing the shrub-steppe environment. Mild, short winters in the shrub-steppe were hypothesized to contribute to reduced winter energy deficits common in temperate herbivores, partly facilitating the observed high fitness. We also hypothesize that in the absence of a significant overstory, the proportion of the range of these elk that would be considered foraging habitat exceeded that typical of elk occupying coniferous forests. Thus, the quantity of foraging areas may have compensated for reduced productivity typical of this region. 29 refs., 3 figs., 2 tabs.

49641 (AD-A–222611/6/XAB) **Computer simulation of chemical reactions in synthetic model compounds and genetically engineered active sites. Final report, 1 July 1989-30 June 1990.** Warshel, A. University of Southern California, Los Angeles, CA (USA). Dept. of Chemistry. 23 May 1990. 6p. Contract N00014-87-K-0507. Source: NTIS, PC A02/MF A01.

The main objective of this project is to advance our understanding of the principles of biological recognition and specificity by using computer simulation approaches. Such approaches are expected to be essential for detailed elucidation of the origin of the enormous power of biological catalysts and to help in exploiting the resulting insight in designing a new generation of highly specific molecular systems. Our computer simulation models have progressed to the level where we can reproduce the effect of genetic modifications of enzymes on its catalytic power in a semiquantitative way. We are also able to estimate in a reasonable way the overall catalytic effect of some enzymes. In three years of this contract we have tried to exploit the fast accumulation of experimental information about genetically modified enzymes in developing clearer design principles. We have progressed in several directions toward this aim: we explored a significant number of genetically modified enzymes (trypsin, subtilisin Aspartateiminotransferase and staphloccocal nucleases) and obtained more confidence in our predictive power.

49642 (CONF-9009243–1) **The effect of denaturation and reduction on cellobiohydrolase 1 from Trichoderma reesei.** Woodward, J. (Oak Ridge National Lab., TN (USA)); Herrmann, P.C. Oak Ridge National Lab., TN (USA). [1990]. 11p. Sponsored by U.S. DOE Energy Research; Solar Energy Research Institute. DOE Contract AC05-84OR21400. From Ethanol from biomass annual meeting; Lincoln, NE (USA); 12-13 Sep 1990. Order Number DE90017324. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The origin of these studies from our interest in the use of protein denaturants to elute cellulase enzyme components from residual cellulosic substrates. A high concentration of the denaturant guanidine hydrochloride, required for elution, was found to only partially unfold the major component of T. reesei cellulase, cellobiohydrolase I(CBH I), and that the reason for the loss in catalytic activity was due to the competitive inhibition of this enzyme and not, as expected, due to its unfolding or denaturation. Papain digestion of CBH I generated "core" enzyme which, apparently, completely broke up upon reduction. These data are discussed in relation to structure/function relationships of this key cellulase enzyme component. In this paper studies on the effect of denaturation and reduction of CBH I are described. The rationale for these studies is to further our understanding of the structure and function relationships of this key cellulase enzyme and to determine the methodology for its successful unfolding and refolding that may be necessary for its recovery. 18 refs., 5 figs.

49643 (DOE/ER/13968–T2) **Mechanism for the selective conjugation of ubiquitin to phytochrome: Progress report for 1989.** Vierstra, R.D. Wisconsin Univ., Madison, WI (USA). Dept. of Horticulture. [1989]. 3p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER13968. Order Number DE90017561. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The long term goal of this project is to understand at the molecular level how intracellular proteins are degraded. The purpose of this research is to characterize the form-dependent degradation of phytochrome as a model system for the study of selective protein breakdown. Phytochrome exists in two photo-interconveretible forms, a red-absorbing Pr form and a far-red absorbing Pfr form. Recent evidence indicates that selective breakdown of

phytochrome in etiolated oat seedlings occurs by a ubiquitin-dependent proteolytic pathway. Ubiquitin is a 76 amino acid eukaryotic protein that is covalently ligated to proteins destined for catabolism and serves as recognition signal for proteases specific for ubiquitin-protein conjugates. In an attempt to understand why Pfr and not Pr is recognized by the ubiquitin pathway, we have characterized ubiquitin-phytochrome conjugates (Ub-P) with respect to their kinetics of accumulation, localization within the cell, and sites of ubiquitin attachment. We also examined Pfr degradation in etiolated seedlings from a variety of other plant species (corn, rye, pea and zucchini squash) for their ability to form Ub-P during Pfr degradation. 4 refs.

49644 (LA-UR-90-2856) **Development of a small gantry robotic workcell for deoxyribonucleic acid (DNA) filter array construction.** Beugelsdijk, T.J.; Hollen, R.M.; Snider, K.T. Los Alamos National Lab., NM (USA). [1990]. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-9009234–1: Symposium on laboratory robotics, Boston, MA (USA), 16-19 Sep 1990). Order Number DE90016446. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

At Los Alamos National Laboratory, we have constructed a primary cosmid library of human chromosome 16. This library consists of an 11-fold representation of the chromosome and is arrayed in microtiter plate format. A need has arisen in the large scale physical mapping of this chromosome, to array spots of DNA from each of these colonies onto filter media for hybridization studies. We are currently developing a small gantry robot-based workcell to array small spots of DNA in an interleaved format. This allows for the construction of a high spot density format filter array. This paper will discuss the features incorporated into this workcell for the handling of thousands of colonies and their automatic tracking and positioning onto the filter. 7 refs., 3 figs., 1 tab.

49645 (ORNL/FTR–3729) **[DNA repair and mutagenesis]: Foreign trip report, July 23, 1990–August 25, 1990.** Mitra, S. Oak Ridge National Lab., TN (USA). 6 Sep 1990. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE90017558. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The traveler visited several highly reputed laboratories involved in DNA repair and mutagenesis studies during his visit in Europe in connection with attending and participating in the 15th International Cancer Congress in Hamburg, W. Germany (August 19–22, 1990). The quality of research involving molecular biological approaches is uniformly excellent in W. Germany and Switzerland and may be at par with that in the US Collaboration with Dr. B. Kaina at the Institute of Genetics at Karlsruhe Kernforschungszentrum (KFK) had been initiated before the visit and was consolidated with concrete plans during the stay of the traveler. The possibility of collaboration with M. Rajewsky at Essen was explored. Prof. Rajewsky has built up an outstanding facility for immunological approaches for studying DNA repair using a newly built 50,000 square foot laboratory. The traveler was gratified to learn at the Cancer Congress that his competitors (in UK and Japan) have not moved ahead of him in experimental plans and results.

49646 Fluorescence line-narrowing spectral analysis of in vivo human hemoglobin-benzo[a]pyrene adducts: Comparison to synthetic analogues. Jankowiak, R. (Iowa State Univ., Ames (USA)); Lu, P.; Small, G.J.; Day, B.W.; Doxtader, M.M.; Skipper, P.L.; Tannenbaum, S.R. pp. 23, Paper ANYL 74 of American Chemical Society, Division of Analytical Chemistry. American Chemical Society, Washington, DC (US) (1990). (CONF-900402–: 199. national meeting of the American Ceramic Society, Boston, MA (USA), 22-27 Apr 1990).

In order to gain insight as to the structure of the adduct formed in vivo between human hemoglobin and the anti-diol epoxide of benzo[a]pyrene (BaP), a series of model compounds was synthesized to investigate the effect on the fluorescence line-narrowing (FLN) spectra of heteroatom substitution at C-10 in BaP tetrahydrotetrol analogues. Spectra taken at 77K by excitation at 355 nm showed marked differences between BaP tetrols and synthetic sulfur, nitrogen, and oxygen adducts of anti-BaP diol epoxide. Human erythrocytes were adducted with racemic, (+), and (–) BaP diol epoxide and analyzed by FLN spectroscopy in an attempt to determine the stereochemistry of the active metabolite of BaP which alkylates hemoglobin in vivo.

49647 Stable isotope labels for DNA sequencing and mapping. Brown, G.M. (Oak Ridge National Laboratory, TN (USA)); Sachleben, R.A.; Burchett, K.L.; Jacobson, D.A.; Larimer, F.W.; Woychik, R.P.; Foote, R.S.; Sloop, F.V.; Jacobson, D.A.; Arlinghaus, H.F.; Thonnard, N. pp. 31, Paper INOR 102 of American Chemical Society, Division of Inorganic Chemistry. American Chemical Society, Washington, DC (US) (1990). DOE Contract AC05-84OR21400. (CONF-900402–: 199. national meeting of the American Ceramic Society, Boston, MA (USA), 22-27 Apr 1990).

In response to the human genome initiative, a rapid DNA sequencing procedure is being developed that will use stable isotopes, incorporated in organometallic compounds, to label DNA for analysis by resonance ionization mass spectrometry (RIS). A method of attaching isotopes of iron, as ferrocene carboxylamide, and tin, as triethylstanyl-propanamide, to the 5′-end of DNA oligomers has been developed, and the resulting labeled DNA was carried through the entire DNA sequencing procedure of Sanger.

49648 Long range electron-transfer beyond 20Å across rigid polypeptide bridges. Ogawa, M.Y. (Rutgers Univ., Piscataway, NJ (USA)); Isied, S.S.; Wishart, J.F. pp. 54, Paper INOR 184 of American Chemical Society, Division of Inorganic Chemistry. American Chemical Society, Washington, DC (US) (1990). DOE Contract AC02-76CH00016. (CONF-900402–: 199. national meeting of the American Ceramic Society, Boston, MA (USA), 22-27 Apr 1990).

The authors have prepared an homologous series of unimolecular electron-transfer (ET) complexes having the form, M_1-$(pro)_n$-M_2, where M_1 is $Ru(bpy)_2$(4-carboxy-4′-methyl-2,2′-bipyridine), M_2 is $Co(NH_3)_5$–, and $(pro)_n$ is an oligo-1-proline polypeptide bridge of variable length (n = 0-5). ^1H and ^{13}C NMR measurements indicate that these oligomers adopt a predominately trans-helical conformation where adjacent proline residues are separated from one another by ca. 3.1 Å within a rigid secondary structure. The rates and temperature dependence of the intramolecular electron-transfer reaction (1) $Ru(L)_2(L^{\cdot-})$-$(pro)_n$-Co(III) —> $Ru(L)_2(L)$-$(pro)_n$-Co(II) 1 have been measured by pulse radiolysis for compounds having metal-to-metal separations greater than 15Å ($n \geq 2$). These results will be discussed in terms of distance dependent activation parameters arising from solvent reorganization.

49649 Synthesis of cell wall xylans and glucans by golgi membranes. Gibeaut, D.M. (Purdue Univ., West Lafayette, IN (USA)); Carpita, N.C. *Plant Physiology, Supplement (USA)*, 89(4): 42 (Apr 1989).

We investigated the biosynthesis of mixed-linkage β-D-glucan and glucuronoarabinoxylans which make up the hemicellulosic matrix of the primary cell walls of maize and other cereal grasses. The Golgi apparatus was enriched from plasma membrane and other organelles by flotation density gradient centrifugation. Glucan synthase I and II, which are established markers for Golgi and plasma membrane, respectively, displayed considerable overlap in conventional separations with sucrose density gradients. Flotation gradients improved separation of the membranes substantially, but the different synthases themselves also incorporated radioactivity from either 10 μM or 1 mM UDP-[^{14}C]-glucose into polymer. Relative incorporation of radioactivity into polymers from UDP-[^{14}C]-xylose by the various membrane fractions was nearly identical to relative IDPase activities, indicating that combined xylosyl transferase-xylan synthase represents a new, unequivocal marker for the Golgi apparatus. We also have developed techniques of gas-liquid chromatography and radiogas proportional counting to achieve capillary quality separation of partially methylated alditol acetates with simultaneous determination of radioactivity in the derivatives. Digestion of polymeric products by specific endo-glycanohydrolases to diagnostic oligosaccharides also reveal specific kinds of polysaccharides synthesized by the Golgi membranes. A combination of these techniques provides unequivocal determination of the linkage structure of specific polymers synthesized by the purified Golgi apparatus.

49650 Abscisic acid biosynthesis in isolated embryos of Zea mays L. Gage, D.A. (Michigan State Univ., East Lansing

(USA)); Fong, F.; Zeevaart, J.A.D. *Plant Physiology (USA)*, 89(4): 1039-1041 (Apr 1989). DOE Contract AC02-76ER01338.

Previous labeling experiments with $^{18}O_2$ have supported the hypothesis that stress-induced abscisic acid (ABA) is synthesized through an indirect pathway involving an oxygenated carotenoid (xanthophyll) as a precursor. To investigate ABA formation under nonstress conditions, an $^{18}O_2$ labeling experiment was conducted with isolated embryos from in vitro grown maize (Zea mays L.) kernels. Of the ABA produced during the incubation in $^{18}O_2$, three-fourths contained a single ^{18}O atom located in the carboxyl group. Approximately one-fourth of the ABA synthesized during the experiment contained two ^{18}O atoms. These results suggest that ABA synthesized in maize embryos under nonstress conditions also proceeds via the indirect pathway, requiring a xanthophyll precursor. It was also found that the newly synthesized ABA was preferentially released into the surrounding medium.

49651 (LA-UR-90-1548) **A clinical flow cytometry data analysis assistant.** Salzman, G.C. (Los Alamos National Lab., NM (USA)); Stewart, C.C.; Duque, R.E.; Braylan, R.C. Los Alamos National Lab., NM (USA). [1990]. 2p. Sponsored by U.S. DOE Management & Administration. DOE Contract W-7405-ENG-36. (CONF-901130--1: 12. annual international conference of the IEEE Engineering in Medicine and Biology Society, Philadelphia, PA (USA), 1-4 Nov 1990). Order Number DE90012097. Source: NTIS, PC A02/MF A01 - OSTI.

A rule-based expert system is being developed to assist clinicians in the analysis of multivariate flow cytometry data for patients with leukemias or lymphomas. The cells are stained with fluorescently labeled monoclonal antibodies and the cell fluorescence is measured with a flow cytometer. Cluster analysis is used to isolate subpopulations in the data on which the clinical decisions are made. Symbolic facts for the expert system are instantiated using these numerical data and the knowledge of the clinicians and experts in flow cytometry. The first prototype used a decision tree and rigid rules. Is successfully classified only nine of eleven leukemia cases. A second prototype incorporating certainty factors into the rules is now being developed that should remove the need for a rigid decision tree. 9 refs.

49652 (UCRL-102523-Rev.1) **X-ray holography for sequencing DNA.** Yorkey, T.; Brase, J.; Trebes, J.; Lane, S.; Gray, J. Lawrence Livermore National Lab., CA (USA). [1990]. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-900756-16-Rev.1: SPIE's international symposium on optical and optoelectronic applied science and engineering exhibit, San Diego, CA (USA), 8-13 Jul 1990). Order Number DE90016480. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In this paper we discuss the potential for application of x-ray holographic imaging techniques to the sequencing of DNA. We formulate an approximate model for the scattering of partially coherent x-rays from an oriented DNA fiber and show the feasibility of reconstruction of heavy atom label positions from the x-ray scattering data. A series of simulations has been done to demonstrate the required reconstruction algorithms. An x-ray experiment is currently in progress to demonstrate the real feasibility of the technique. 4 refs., 4 figs.

Progress made in understanding the molecular genetics of leukemia is described. We have had remarkable success in applying the new techniques of using nonradiolabeled DNA probes to identify chromosome abnormalities more precisely. We have continued to update our series of patients who have treatment related acute myeloid leukemia (AML) and myelodysplasia (MDS). We have identified malignant cells in five adult patients with MDS or AML. Also discussed is mapping DNA probes to chromosome 5.5 refs., 5 figs., 5 tabs.

Pub. in International Jnl. for Vitamin and Nitrition Research, Vol. 59, 333-338(13 Mar 1989).

In vivo percutaneous penetration and tissue distribution of 14C-labeled vitamin E applied to human skin grafted onto athymic nude mice were determined. At 1 hr, mouse skin contained the highest level of radioactivity, followed by the muscle, blood, liver, lung, adipose tissue, spleen, kidney, brain, heart, and eyes. A linear increase with time in tissue radioactivity was observed throughout the 24 hr experimental period. At 4 and 24 hrs skin grafts were highly radioactive. At 4 hrs the epidermis and the upper portion of the dermis contained more radioactivity than the remaining portion of the dermis. In contrast, at 24 hrs the highest level of radioactivity was detected in the lower dermis. No radioactivity was detected in expired air while 0.2% of the dose was found in the urine. The data show that vitamin E does penetrate skin and that the dermis acts as a barrier or reservoir for this highly lipophilic compound.

A number of X-ray spectra in the radiodiagnostics energy range have been measured by a Si detector. The results obtained show that this type of detector is sufficiently accurate for X-ray spectrometry in quality-control programmes for radiodiagnosis equipment. In particular, Si detectors for diagnostic X-ray spectrometry are, in comparison with Ge detectors, much less expensive and more practical for use in the usual operational conditions in radiological departments. (author).

The conversion of radiological image into a radiograph is always accompanied by loss of information. The quality of a radiograph can be expressed quantitatively by means of four components: contrast, resolution power, unsharpness and noise. In order to make radiographs comparable, the following requirements should be fulfilled: (a) representation in determined projections (so-called "standard projections"), (b) imaging as "harmonic image" in the whole contrast scale of the parts that are important for the diagnosis of the radiograph (so-called "dominants"), (c) adjustment of the mean optical density to the optimal contrast sensitivity of the eye, (d) extensive elimination of disturbing influences (e.g. motion, scattered radiation, veiling glare), and (e) reduction of the radiation exposure to values at which image details and critical structures are still perceptible. To fulfil these requirements, good radiographic technique and minimum values of the physical image parameters are needed. The influence of these parameters on the quality of the radiograph by changes in the projection, mean optical density, object latitude, contrast of details, exposure time and contrast transfer will show what can be claimed for an "optimal" radiograph and what deviations from the optimal value can be accepted. (Author).

LS23 7BQ.

Specification and measurement of performance is the cornerstone of quality control in diagnostic radiology. This paper deals with the background to the measurement process and in particular what is meant by accuracy and precision. The relevance of these two quantities to both the tolerances imposed on the measurement process and the limiting value of the measured quantity is highlighted. The framework for quality control in diagnostic radiology is described together with the need to match the tolerances of the measurement process to the regime employed in tests associated with specifying performance in the factory, in the X-ray department upon installation, or monitoring performance during routine operation. Error analysis is used to determine overall effects on the final outcome of the limiting values associated with individual parameters. The multi-parameter expressions used in this analysis also have an important role to play in optimisation analyses of the radiological process. (Author).

When procuring new equipment, performance and safety should be specified, if possible by reference to international standards. Some of the characteristics of the International Electrotechnical Commission (IEC) standard for X-ray generators, in particular the accuracy of the operating data, are described. The quality control tests to be performed after installation comprise acceptance test, status test and constancy test. The first two involve absolute measurements and will be the responsibility of physicists or engineers. Apparently limiting values stipulated by users are a factor of two lower than the limits of the IEC standard. By means of an example it is shown that modern X-ray generators can meet the lower limits of the users without problems. In order to obtain optimum initial quality when procuring new equipment operating data, limiting values must be specified and must be verified by acceptance testing, etc. However, in many countries physicists and engineers are not available for this job. A relatively uncomplicated test object can be used by radiographers for checks on fluoroscopic systems. The findings from such tests in Denmark are compared with other published findings and good agreement is found. Therefore it is proposed that such uncomplicated tests could form the basis for quality evaluation. (author).

49661 (BIR–18, pp. 20-24) **Procuring, maintaining and using equipment: the key issues in controlling exposure to patients.** Hendra, I.R.F. (Dept. of Health and Social Security, London (UK). Radiological equipment is not purpose-built for each individual application. Thus, not only are acceptance criteria directly related to the design of equipment and the quality assurance exercised during its manufacture, but also the performance, safety and reliability of equipment must feature in the requirements for procuring new equipment. In the UK this issue is dealt with under the Department of Health and Social Security Manufacturer Registration Scheme for Medical Equipment in its application to radiological

equipment. Similarly the continuing reliability of equipment in service is directly related to the quality of maintenance services. This is determined largely by the manner in which such services are procured. In the UK this issue has been considered by one of four Working Parties commissioned by the South-East Thames Regional Health Authority who are the "Centre of Responsibility" for diagnostic imaging equipment. The report prepared from the first phase of activity of this working group describes features of a procurement specification for maintenance services and prescribes the complementary duties of contractors and customers. The use in X-ray departments of the kind of manufacturing quality system that is used by most reputable equipment manufacturers has the potential for a dramatic reduction in exposure to patients. (author).

49662 (BIR–18, pp. 25-26) **Proposed limiting values for performance criteria in acceptance testing of diagnostic X-ray equipment in the Federal Republic of Germany.** Baeuml, A. LS23 7BQ.

In the Federal Republic of Germany a new X-ray ordinance came into force in 1988 containing a specific paragraph on quality assurance for all medical X-ray units stipulating acceptance tests, regular checks and supervision by medical bodies and the competent authorities. Acceptance testing is to be performed by engineers from the equipment suppliers or manufacturers in new and also existing installations. It is expected that the service engineers will adjust the equipment in such a way as to obtain optimal performance before measurements are made, the results of which are to be stated in a certificate describing the quality status of the equipment. A working group has developed guidelines for these acceptance tests. The items to be measured are reported and the proposed limiting values and their tolerances are discussed. (author).

Since 1984 the Regional Medical Physics Department has participated in a regional acceptance testing programme for all X-ray equipment from mobile units to computed tomography scanners. The organizational and radiation physics aspects of the programme are described. Three levels of tests are performed by physicists: the first on installation, the second after 3 months, and the final visit just prior to the end of the manufacturer's warranty. The second test is only performed if any aspect of performance requires rechecking as a result of the first visit. Acceptance test protocols are based on those published by the Institute of Physical Sciences in Medicine. Details of the limiting values for the acceptance test measurements are given. The results of the programme are discussed. In some instances the testing has resulted in modifications to the design and construction of X-ray equipment. Acceptance testing is important in determining a baseline standard of performance against which routine quality assurance may be assessed. (author).

Regulations made under the Healing Arts Radiation Protection (HARP) Act, Government of Ontario, Canada, were promulgated in the form of a safety Code in November, 1985. These regulations require a minimum technical quality assurance (QA) programme for all diagnostic radiology facilities in the Province. The mandatory QA programme requires certain tests and procedures to be carried out at specified intervals. The tests include photographic quality control, patient entrance exposure measurement, collimation, half-value layer, phototiming parameters, fluoroscopic parameters including maximum patient entrance exposure rate, resolution, limit timer and automatic brightness control, and tomographic parameters including fulcrum accuracy, thickness of cut and mechanical stability. Records of the results of these tests must be kept for at least 6 years. A set of HARP guidelines published in June 1987 includes a description of appropriate measuring methods for each test together with a set of forms for recording the results of such tests. The regulations specify limiting values for a number of equipment performance parameters, including the maximum allowable patient skin entrance exposure values for common radiographic projections. The Secretary of Public Health in Austria asked for a statistical investigation of the physical parameters which contribute to image quality in X-ray diagnosis. This survey resulted in the finding that the resolution in X-ray exposures showed a variation between 2.0 and 5.7 1p mm^{-1}. However, most of the institutes visited had results near 5 1p mm^{-1}, and so it seemed worthwhile to investigate those with values below 3 1p mm^{-1}. For X-ray exposures the minimum resolution should be $\geq$3.4 1p mm^{-1} and in fluoroscopy $\geq$0.9 1p mm^{-1}. (author).

Following a workshop held in Neuherberg, FRG, in 1980 a guide for quality assurance in diagnostic radiology was published by WHO in 1982. Quality assurance programmes were recognized as being necessary for three main objectives: first the improvement of medical diagnostic imaging, secondly cost containment, and thirdly the reduction of radiation exposure. Concurrently, because of the paramount importance for basic diagnostic imaging, WHO prepared Technical Specifications for the X-ray Apparatus to be Used in a Basic Radiological System (BRS), governed by the concepts of "design-out maintenance" and "design-in quality assurance". The outcome of WHO's efforts, in comparison with the recognized quality assurance objectives, indicates that, although it is too early to measure overall improvements in medical diagnostic imaging, the two main aspects, accessibility and image quality, should be improved. Regarding cost containment, elimination of many logistical and support requirements should result in considerable savings. Regarding the reduction of radiation exposure, and using the entrance skin exposure as an indicator, an important finding is that with the WHO-BRS type X-ray equipment, in most cases the patient exposure was less than the average values in the United States. (author).

49667 (BIR–18, pp. 37-40) **An overview of the International Electrotechnical Commission's activities on quality assurance in diagnostic radiology.** Julius, H.W. (Radiological Service TNO, Arnhem (Netherlands)); Ammers, H. van; Henshaw, E.T. British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development; Commission of the European Communities, Brussels (Belgium). Directorate General for Employment, Social Affairs and Education. 1989. In 1981, the International Electrotechnical Commission Subcommittee 62B set up a Working Group (WG 10) to deal with quality assurance in diagnostic X-ray departments and, more specifically, to develop international standards describing procedures to test the constancy of parameters of diagnostic X-ray installations. Since then, the working group has produced a report on General Aspects of Quality Assurance in Diagnostic X-ray Departments and four draft standards on specific topics, while seven more documents are in advanced drafting stage. Several others are presently under consideration. According to the approach adopted by the Working Group, these documents are meant to assist in establishing quality assurance programmes in hospitals and provide guidance on how to perform the tests and interpret their results. This paper reveals the general philosophy behind the activities of the Working Group as well as some details of the standard produced so far, with emphasis on the physical parameters of diagnostic X-ray installations and their proposed criteria for satisfactory performance. (author).

49668 (BIR–18, pp. 40-43) **Practical aspects of uniformity and intercomparison of quality control tests.** Henshaw, E.T. (Radiation Protection Seervice, Liverpool (UK)); Julius, H.W.; Ammers, H. van. British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). LS23 7BQ.

Quality control programmes, the relevant technical and physical parameters, test methods and tolerances, and the determination of appropriate limiting values are examined in relation to the desirability and practicality of (a) making intercomparisons between test methods and (b) achieving overall uniformity. (author).

49669 (BIR–18, pp. 44-47) **Image field size and beam collimation in fluoroscopic equipment.** Brennan, A.G. (Christie Hospital and Holt Radium Inst., Manchester (UK)); Shaw, A.J.; Jones, A.P. British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development; Commission of the European Communities, Brussels (Belgium). Directorate General for Employment, Social Affairs and Education. 1989. (CONF-8802161–: Workshop on technical and physical parameters for quality assurance in medical diagnostic radiology: tolerances, limiting values and appropriate measuring methods, Brussels (Belgium), 23-25 Feb 1988; EUR–11620). In *Technical and physical parameters for quality assurance in medical diagnostic radiology: Tolerances, limiting values and appropriate measuring methods.* Source: Available from The British Library Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ.

Image field size and beam collimation are usually measured at all image size settings on fluoroscopic equipment at acceptance and periodically thereafter. Image field size is normally measured using a rectangular wire grid and beam collimation is generally measured using a fluorescent screen or radiographic cassette. These are then compared with the nominal entrance field size to determine acceptance. There are, however, no internationally established limiting values for image field size and beam collimation in fluoroscopy. In Britain it is accepted that the ratio of the image field size diameter to the nominal field size diameter should have a minimum limiting value of 0.85, and it is proposed that this be adopted. It is also proposed that the beam collimation be compared with the image field size rather than the nominal field size, and that the ratio of the radiation field size diameter to the image field size diameter should have a maximum limiting value of 1.1. The tolerances inherent in both these measurements are discussed. The frequency with which image field size and beam collimation measurements outside these limiting values were identified on a large number of fluoroscopic units is presented. (author).

49670 (BIR–18, pp. 47-51) **Field size and centring for conventional X-ray equipment.** Klimpel, H. (Technischer Ueberwachungs-Verein, Hannover (Germany, F.R.). Since 1973, all X-ray equipment for medical applications in the Federal Republic of Germany has had to be examined according to the requirements of the German "Rontgenverordnung" before it is used on patients and after each essential modification of design or construction. These examinations are carried out by inspectors appointed by the authorities, e.g. TUV. The field size adjustment

and the centring of the radiation beam in relation to the image reception area is checked, along with other tests. To increase quality assurance in X-ray diagnosis, since the mid-1980s X-ray equipment has also been subject to in-service inspections to an increasing extent. (author).

The energy dependence of the response of an ionization chamber used in the chain of the Amplimat/Philips automatic exposure control system was determined with respect to air kerma and with respect to the dose requirement of two different film-screen combinations. The investigations have been divided into those with negligible dose contributions due to scattered radiation and those with well known ratios between direct and scattered radiation. Information on the relative dose contributions of direct and scattered radiation behind a water-equivalent phantom have been obtained by experimental investigations and by Monte Carlo simulations. The agreement between the two methods is within a few per cent. It will be shown that in such fields film-screen combinations and the ionization chamber have significantly different behaviour. This is in line with the experience of radiologists, who (depending on patient thickness and tube voltage) vary the setting of the automatic exposure control system. (author).

The desirable properties and methods of achieving automatic exposure control in film-screen radiography, fluoroscopy, spot-film fluorography and cinefluorography are discussed. Advantages of certain methods in achieving optimum image quality for minimal patient exposure are considered. In digital subtraction fluorography (DSF) where relatively large exposure levels per image are used, proper set-up of exposure conditions is of particular importance. These systems require a high degree of stability in exposure to maintain a high level of image quality. We have developed test methods for monitoring the set-up and reproducibility of exposure levels in DSF. (author).

49673 (BIR–18, pp. 60-62) **Determination of high voltage: Methods of measurement, practicality, accuracy and regulations concerning tolerances.** Rehm, H-J. (Klinikum Nuernberg (Germany, F.R.). The quality of an X-ray image is influenced by the radiation parameters (kV value, filtration) because of their impact on contrast and contrast resolution. Deviations from the nominal high voltage of an X-ray tube may lead to unnecessary exposure of the patient and complicate the comparability of X-ray images, which is why there is interest in an easy to handle, non-invasive method of determining the high voltage of an X-ray tube. For the purposes of constancy, several non-invasive high-voltage test tools have been developed, some of which work on the principle of modified film cassettes with two different intensifying screens or different optical extenuations, while others use a "two filter method" with photodiodes (electronic kV meters). The accuracy, reproducibility and practicality of two test cassettes and five electronic kV meters have been investigated and their usefulness with respect to national regulations and physicians' demands is discussed. (author).

The attenuation properties of several phantom materials such as aluminium, copper, acrylic, water and some anatomic phantoms, such as male and female Alderson-Rando phantoms, have been studied. The measurements were made in a narrow-beam geometry with an ionization chamber and with an X-ray spectrometer consisting of a Ge semiconductor detector and multichannel analyser. The results of the spectral measurements show that the spectral equivalence between LucAl and Alderson-Rando phantoms is good. The absorption of low-energy photons in aluminium and copper is much larger than in LucAl. These materials can be used only for a particular set of X-ray system parameters. The best spectrally equivalent material compared with LucAl is water. The attenuation measurements made with an ionization chamber agree with the spectral measurements. The results of the spectral and attenuation measurements are described. (author).

49675 (BIR–18, pp. 68-70) **A protocol for the commissioning and routine testing of mammographic X-ray systems.** Fitzgerald, M. (St. George's Hospital, London (UK). Dept. of Medical Physics and Bioengineering); Dance, D.R.; Fisher, K.; Lawinski, C.; Ramsdale, M.L. British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). LS23 7BQ.

A national breast cancer screening programme is being organized in the UK over a 2-year period commencing in 1988. It is

based on the mammographic X-ray examinations of women aged 50-64 at 3-year intervals. This has engendered much interest in physical measurements on mammographic X-ray systems and the Diagnostic Radiology Topic Group of the Institute of Physical Sciences in Medicine has formed a working group to produce a protocol for the commissioning and routine testing of mammographic X-ray systems, to include X-ray sets, screen-film systems and automatic processing units. This paper summarizes the main recommendations of the group regarding the physical measurements thought to be essential to characterize the performance of a new X-ray set, including suggested limiting values and measurements tolerances for some of the quantities. (author).

49676 (BIR–18, pp. 70-72) **Screening with mammography - what quality is required and how is it checked?.** Leitz, W. (National Inst. of Radiation Protection, Stockholm (Sweden)). British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). Source: Available from The British Library Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ.

The medical value of screening for breast cancer with mammography has been proved in Swedish trials, in which a 30% reduction of breast cancer mortality was observed. However, the benefits may easily be lost if the examinations are not performed in accordance with the most stringent requirements. With the prospect of general screening with mammography all over Sweden, the National Health Board and the National Institute of Radiation Protection have issued guidelines on how screening is to be organized. Far-reaching recommendations concerning X-ray equipment, film processing, radiation dose, and image quality are in preparation. The basis of these recommendations, their background and the underlying field experience are the subject of this paper. A mammographic system regarded as the optimum presently achievable serves as a reference. Comparison is made with other systems based on performance measurements of the X-ray equipment (i.e. tube voltage, radiation output, beam quality), a sensitometric evaluation, dose measurements, and image quality measurements including spatial resolution and quantitative assessment of contrast and fraction of scattered radiation. The test methods are described and the criteria for acceptance of a system are discussed. (author).

49677 (BIR–18, pp. 73-76) **A phantom for quality control in mammography.** Gambaccini, M. (Ferrara Univ. (Italy)); Rimondi, O.; Marziani, M.; Toti, A. British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development; Commission of the European Communities, Brussels (Belgium). Directorate General for Employment, Social Affairs and Education. 1989. (CONF-8802161–: Workshop on technical and physical parameters for quality assurance in medical diagnostic radiology: tolerances, limiting values and appropriate measuring methods, Brussels (Belgium), 23-25 Feb 1988; EUR–11620). A phantom for evaluating image quality in mammography has been designed and will be used in the national programme "Dose and Quality in Mammography". The characteristics of the phantom are (a) about the same X-ray transmission as a 5 cm 50% fat and 50% water breast for energies between 15 and 50 keV and (b) optimum energies for imaging of the test objects (included in the phantom) in very close agreement with the optimum energies for imaging of calcifications and tumours in a 5 cm 50% fat and 50% water breast. An experimental comparison between the prototype and some commercial phantoms was carried out. Measurements are in progress to test the phantom's ability to evaluate the performances of mammographic systems quantitatively. (author).

49678 (BIR–18, pp. 76-79) **An electronic instrument for high-voltage measurements of an X-ray unit for mammography.** Gambaccini, M. (Ferrara Univ. (Italy)); Rimondi, O.; Marziani, M. British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development; Commission of the European Communities, Brussels (Belgium). Directorate General for Employment, Social Affairs and Education. 1989. An instrument for high-voltage measurements of an X-ray unit for mammography consists of a radiation probe, an acquisition circuit and an analogue/digital converter connected to a personal computer. The probe is composed of two photodiodes, one covered by an Al filter and the other by a Mo filter. The wave-form measurements of a three-phase six-pulse unit (50 Hz power line frequency, 0.1 s exposure time, Mo anode X-ray tube, 0.8 mm Be window and 39 μm Mo filter) performed using the electronic system were compared with those made using a voltage divider and a digital oscilloscope. The measurements were carried out for seven voltage values from 25 to 39 kVp. The differences between the invasive and indirect data were lower than 2% for voltage maxima (kVp) and lower than 5% for minima. The systematic error depending on the total filtration of the X-ray beam was also considered. The instrument will be used in the national programme "Dose and Quality in Mammography". (author).

49679 (BIR–18, pp. 79-81) **Quality control of dental X-ray units.** Havukainen, R. (Finnish Centre for Radiation and Nuclear Safety (STUK), Helsinki (Finland)). British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development; Commission of the European Communities, Brussels (Belgium). Directorate General for Employment, Social Affairs and Education. 1989. (CONF-8802161–: Workshop on technical and physical parameters for quality assurance in medical diagnostic radiology: tolerances, limiting values and appropriate measuring methods, Brussels (Belgium), 23-25 Feb 1988; EUR–11620). In *Technical and physical parameters for quality assurance in medical diagnostic radiology: Tolerances, limiting values and appropriate measuring methods*. Source: Available from The British Library Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ.

There are 4000 dental X-ray units in use in Finland. Inspections by the Finnish Centre for Radiation and Nuclear Safety (STUK) have disclosed a great variation in patient dose and many equipment failures. The range of the air kerma value in bite-wing projections at the end of the cone was 0.5-151 mGy and the mean value about 6.2 mGy, and the air kerma was higher than the recommended value of 7 mGy in 30% of units. Failures were found in 20% of units. The high doses usually arose from incorrect film processing and most malfunctions were found in old units. A type-testing method has been developed and the requirements for new dental units have been laid down in a directive issued by STUK in 1987. The units are type-tested and then exempted from on-site inspection. To ensure that the units that are sold are similar to the type-tested one, STUK makes random inspections. A postal control system will be used periodically to detect unusually high doses, and will also be used to follow the collective dose estimates from dental radiography. It is expected that with the new procedure control of dental X-ray equipment, detection of unnecessarily high doses and reduction of the collective dose will be achieved more effectively than before. (author).

49680 (BIR–18, pp. 81-84) **Quality assurance of computed tomography scanner beams in diagnostic radiology.** Lindskoug,

B.A. (Halmstad Regional Hospital (Sweden). Regional Dept. of Radiation and Hospital PHysics). British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development; Commission of the European Communities, Brussels (Belgium). Directorate General for Employment, Social Affairs and Education. 1989. (CONF-8802161–: Workshop on technical and physical parameters for quality assurance in medical diagnostic radiology: tolerances, limiting values and appropriate measuring methods, Brussels (Belgium), 23-25 Feb 1988; EUR–11620). In *Technical and physical parameters for quality assurance in medical diagnostic radiology: Tolerances, limiting values and appropriate measuring methods.* Source: Available from The British Library Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ.

The number of computed tomography (CT) scanners in diagnostic radiology is increasing, to the extent that they are now found in relatively small hospitals. These hospitals do not have local physicists available and so methods must be developed to allow quality assurance to be carried out at distant laboratories. Several different types of solid water phantoms are available with various built-in test objects that may supply sufficient information about the many parameters that must be checked. The dose distributions, however, are usually not so well considered, although the connection between image quality and absorbed dose must be known for optimal use of a CT scanner. By introducing thermoluminescent dosemeters (TLDs) into a commercial phantom (RMI), it was possible to measure the absorbed dose profile and the line integral of the absorbed dose across the slit. The computer-guided readout of the TLDs gives the absorbed dose, the average dose and half maximum width, absorbed dose curve, and also the line integral of the peak. The only modification of the phantom was five holes, drilled at strategic positions, that did not influence the built-in test objects. This single measurement provides an appropriate monthly quality assurance check of the CT scanner with little extra effort. (author).

49681 (BIR–18, pp. 84-86) **Quality control in quantitative computed tomography.** Jessen, K.A. (Aarhus Univ. (Denmark). Aarhus Kommunehospital); Joergensen, J. British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development; Commission of the European Communities, Brussels (Belgium). Directorate General for Employment, Social Affairs and Education. 1989. (CONF-8802161–: Workshop on technical and physical parameters for quality assurance in medical diagnostic radiology: tolerances, limiting values and appropriate measuring methods, Brussels (Belgium), 23-25 Feb 1988; EUR–11620). LS23 7BQ.

Computed tomography (CT) has for several years been an indispensable tool in diagnostic radiology, but it is only recently that extraction of quantitative information from CT images has been of practical clinical value. Only careful control of the scan parameters, and especially the scan geometry, allows useful information to be obtained; and it can be demonstrated by simple phantom measurements how sensitive a CT system can be to variations in size, shape and position of the phantom in the gantry aperture. Significant differences exist between systems that are not manifested in normal control of image quality and general performance tests. Therefore an actual system has to be analysed for its suitability for quantitative use of the images before critical clinical applications are justified. (author).

49682 (BIR–18, pp. 87-90) **Quality control in computed tomography X-ray scanners.** Perry, B.J. (St. George's Hospital, London (UK). Dept of Medical Physics and Bioengineering); Edyvean, S. British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development; Commission of the European Communities, Brussels (Belgium). Directorate General for Employment, Social Affairs and Education. 1989. (CONF-8802161–: Workshop on technical and physical parameters for quality assurance in medical diagnostic radiology: tolerances, limiting values and appropriate measuring methods, Brussels (Belgium), 23-25 Feb 1988; EUR–11620). In *Technical and physical parameters for quality assurance in medical diagnostic radiology: Tolerances, limiting values and appropriate measuring methods.* Source: Available from The British Library Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ.

Practical methods of estimating computed tomography X-ray scanner imaging performance treat the scanner as a black box, the measurements usually being non-invasive. The performance of individual components or groups of components within the system is not usually measured. The digital nature of the imaging process allows direct numerical assessment of the actual imaging parameters. This approach is used for type and acceptance testing as well as quality control, the type and acceptance tests providing the baseline for subsequent quality control measurements. The usual X-ray imaging parameters of noise, resolution and dose can all be used for quality control purposes, but the relative emphasis between these parameters will differ when compared with type or acceptance testing. Other simple measurements may be of equal use. All manufacturers suggest quality control protocols of varying complexity using a wide range of phantom designs. Where quality control is undertaken routinely, it is usually the manufacturer's protocols that are followed. It is pertinent to ask whether the quality control measurements currently suggested are necessary and/or sufficient. (author).

49683 (BIR–18, pp. 91-92) **Speed and speed classes of film-screen systems: Determination and practical application.** Borcke, E. (Agfa-Gevaert AG, Muenchen (Germany, F.R.)). British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development; Commission of the European Communities, Brussels (Belgium). Directorate General for Employment, Social Affairs and Education. 1989. (CONF-8802161–: Workshop on technical and physical parameters for quality assurance in medical diagnostic radiology: tolerances, limiting values and appropriate measuring methods, Brussels (Belgium), 23-25 Feb 1988; EUR–11620). LS23 7BQ.

In order to carry out the DIN 6868, Part 50(1988) acceptance test within the framework of measures of quality assurance, the dose of the film-screen combination used is needed in the plane of the cassette. Recent methods for determination of sensitivity use the film-screen system instead of artificial light and decisions can be made as to the dose of the cassette plane. In order to characterize the sensitivity, it is proposed to use a given scale of numbers for the sensitivity S in increments of $\Delta \log S = 0.05$ in numerical values. It will also be useful for practical purposes to employ the "sensitivity class" with 2-fold increments in order to bring the planned radiological specifications into agreement with the demands of the user. (author).

49684 (BIR–18, pp. 93-95) **Film-screen characteristics.** Hoeschen, D. (Physikalisch-Technische Bundesanstalt, Braunschweig (Germany, F.R.)). British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development; Commission of the European Communities, Brussels (Belgium). Directorate General for Employment, Social Affairs and Education. 1989. (CONF-8802161–: Workshop on technical and physical parameters for quality assurance in medical diagnostic radiology: tolerances, limiting values and appropriate measuring methods, Brussels (Belgium), 23-25 Feb 1988; EUR–11620). In *Technical and physical parameters for quality assurance in medical diagnostic radiology: Tolerances, limiting values and appropriate measuring methods.* Source: Available from The British Library Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ.

The measuring methods for the determination of characteristic imaging parameters of screen-film systems, i.e. the characteristic curve, the modulation transfer function and Wiener spectrum, are described. Results, together with measurement uncertainties, are

given and discussed. It is proposed to reduce the measurement uncertainties by standardizing the methods. However, an overall image quality parameter, such as the detective quantum efficiency, is not yet available. (author).

49685 (BIR–18, pp. 95-97) **Reduction of X-ray film processing variations.** Legros, J. (Kodak Pathe, Chalon-sur-Saone (France). Photographic Technology Centre); Bayol, R. British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development; Commission of the European Communities, Brussels (Belgium). Directorate General for Employment, Social Affairs and Education. 1989. (CONF-8802161–: Workshop on technical and physical parameters for quality assurance in medical diagnostic radiology: tolerances, limiting values and appropriate measuring methods, Brussels (Belgium), 23-25 Feb 1988; EUR–11620). LS23 7BQ.

The reduction of variations in automatic and manual X-ray film processing depends on parameters linked to the processor ("mechanical") and parameters linked to the processing solutions ("analytical"). The most important parameters are reviewed and the monitoring methods are discussed. The advantages of sensitometric tests are shown and the ways of carrying them out are described. It is demonstrated that careful analysis of trends and drifts during sensitometric tests is one of the most efficient ways to achieve quality assurance programmes in the area of processing. (author).

49686 (BIR–18, pp. 97-99) **Sensitometric and densitometric methods for quality control of medical X-ray images.** Vieth, G. (Physikalisch-Technische Bundesanstalt, Braunschweig (Germany, F.R.)). British Inst. of Radiology, London (UK); Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development; Commission of the European Communities, Brussels (Belgium). Directorate General for Employment, Social Affairs and Education. 1989. (CONF-8802161–: Workshop on technical and physical parameters for quality assurance in medical diagnostic radiology: tolerances, limiting values and appropriate measuring methods, Brussels (Belgium), 23-25 Feb 1988; EUR–11620). In *Technical and physical parameters for quality assurance in medical diagnostic radiology: Tolerances, limiting values and appropriate measuring methods.* Source: Available from The British Library Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ.

The processing of X-ray film is controlled by samples that are exposed to light in a sensitometer. The light exposure is affected by an uncertainty of approximately $\Delta D = \pm 0.12$ and so the limiting value of processing $\Delta D = \pm 0.2$ is reduced (to approximately $\Delta D = \pm 0.16$). The sensitometer itself should also be checked. The uncertainty of simple densitometers is approximately 2% if the instruments are calibrated. The limiting value of the checking for constancy of the X-ray equipment, $\Delta D = \pm 0.2$, interferes with that of processing and can therefore be doubled in extreme cases. The density variation in processing should be as small as possible when constancy is checked. (author).

49687 (DOE/ER/60418–2) **Nuclear medicine and quantitative imaging research (instrumentation and quantitative methods of evaluation): Progress report, January 15–September 1, 1990.** Beck, R.N.; Cooper, M.D. Franklin McLean Memorial Research Inst., Chicago, IL (USA). Sep 1990. 32p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER60418. Order Number DE90017602. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This report summarizes goals and accomplishments of the research program supported under DOE Grant No. FG02-86ER60418 entitled Instrumentation and Quantitative Methods of Evaluation, with R. Beck, P. I. and M. Cooper, Co-P.I. during the period January 15, 1990 through September 1, 1990. This program addresses the problems involving the basic science and technology underlying the physical and conceptual tools of radioactive tracer methodology as they relate to the measurement of structural and functional parameters of physiologic importance in health and disease. The principal tool is quantitative radionuclide imaging. The overall objective of this program is to further the development and transfer of radiotracer methodology from basic theory to routine clinical practice in order that individual patients and society as a whole will receive the maximum net benefit from the new knowledge gained. The focus of the research is on the development of new instruments and radiopharmaceuticals, and the evaluation of these through the phase of clinical feasibility. 7 figs.

Source: NTIS, PC A04/MF A01 - OSTI; GPO Dep.

This is a report of progress in Year Two (January 1, 1990–December 31, 1990) of Grant FG02-86ER60438, "Quantitative Studies in Radiopharmaceutical Science," awarded for the three-year period January 1, 1989–December 31, 1991 as a competitive renewal following site visit in the fall of 1988. This program addresses the problems involving the basic science and technology underlying the physical and conceptual tools of radioactive tracer methodology as they relate to the measurement of structural and functional parameters of physiologic importance in health and disease. The principal tool is quantitative radionuclide imaging. The overall objective of this program is to further the development and transfer of radiotracer methodology from basic theory to routine clinical practice in order that individual patients and society as a whole will receive the maximum net benefit from the new knowledge gained. The focus of the research is on the development of new instruments and radiopharmaceuticals, and the evaluation of these through the phase of clinical feasibility. 25 refs., 13 figs., 1 tab.

49689 (EUR–12522, pp. 261-272) **Clinical possibilities of neutron capture therapy.** Dewit, L. (Antoni van Leeuwenhoek Ziekenhuis, Amsterdam, (NL). Afdeling Radiotherapie). Commission of the European Communities, Luxembourg (Luxembourg). 1989. (CONF-8904378–: HFR Colloquium, PETTEN (Netherlands), 20-21 Apr 1989). In *Prospects and future utilization.* Order Number DE91702056. Source: NTIS (US Sales Only), PC A18/MF A01.

The idea of utilizing low energy neutrons for treatment of cancer was generated already in 1936, 4 years after the discovery of the neutron. The principle is that thermal neutrons are captured by nuclei, which have a large cross-section. Good candidates for such neutron capture are ^{10}B, ^{6}Li, ^{157}Ga and ^{235}U, ^{10}B has, thus far, been the atom of first choice. The first clinical studies were performed in 1951 at the Brookhaven National Laboratory and at the Massachusetts Institute for Technology in the United States. These trials have been a failure mainly due to the lack of availability of boron compounds which were selectively taken up by the tumor. Hence, exceedingly high doses were delivered to normal tissue compartments, in particular the endothelium and the superficial brain tissue. With the development of more tumor-specific boronated drugs, a renewed interest has been generated in Boron Neutron Capture Therapy (BNCT) in recent years.

49690 (INIS-mf–12110) **Results and hazards of postoperative radiotherapy using orthovoltage (300 kV) in carcinomas of the breast.** Antonopoulos, K. Freie Univ. Berlin (Germany, F.R.). Mar 1984. 74p. (In German). Order Number DE90706210. Source: NTIS (US Sales Only), PC A04/MF A01 - OSTI.

A total of 338 bearers of mammary carcinomas treated between 1971 and 1980 were included in this study and analysed for survival times, metastisation, local relapses and radiation-related hazards so as to permit the results of radiotherapy using hard X-rays (300 kV) to be evaluated and compared to those achieved with other methods of irradiation. In all, it was concluded that the method under investigation did not significantly alter the survival times given for those patients in the relevant literature. As far as the occurrence of local relpases and radiation hazards is concerned, it appears to be marginally better than other techniques.

49691 (INIS-mf–12113) **The role of CT in follow-up treatment of patients after proctectomy due to a carcinoma: A**

retrospective study of 93 patients. Oellinger, R. Freie Univ. Berlin (Germany, F.R.). 24 Oct 1986. 92p. (In German). Order Number DE90706212. Source: NTIS (US Sales Only), PC A05/MF A01 - OSTI.

The results of the thesis explain the unquestionable value of computed tomography as a method for follow-up treatment. Given a suitable timing of CT examinations, and due consideration of additional information obtained e.g. by CEA assays, early detection of local recurrences is possible.

49692 (INIS-mf-12114) **Investigation of the permeation of radiocontrast agent into the experimentally irritated stratum corneum.** Schreiner-Skottke, G. Freie Univ. Berlin (Germany, F.R.). 9 Dec 1986. 87p. (In German). Order Number DE90706211. Source: NTIS (US Sales Only), PC A05/MF A01 - OSTI.

The thesis is a comparative study of the permeation of X-ray contrast medium into the stratum corneum of normal skin and of chemically affected skin in man.

49693 (IPEN-PUB-294) **Isolation and purification of rabbit imunoglobulin (IgG) for the production of a second antibody for radioimunoassay.** Silva, S.R. da; Borghi, V.C. Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo, SP (Brazil). Mar 1990. 20p. (In Portuguese). Order Number DE91602119. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Immunoglobulin (IgG) from rabbit serum was isolated and purified by sodium sulphate precipitation followed by ion exchange chromatography on DEAE-cellulose. The efficiency of the procedure was followed by total protein determination during all purification steps. The purity of the final product was verified through immunoelectroforesis of IgG with sheep serum anti-rabbit whole serum. Were obtained 850 mg of pure IgG, enough for the immunization of several sheeps to be used in the production of a second antibody for radioimmunoassay. (author).

49694 (STD-87-25) **Assessment of a Shimadzu/medical X-ray supplies basic radiographic installation.** Department of Health, London (UK). Supplies Technology Div. Dec 1987. 62p. Source: Available from The British Library, Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ. Price Pound 25.00.

This report covers the assessment of a basic radiographic installation of Shimadzu equipment comprised of a 50 KW 2 pulse single phase generator, floating top bucky table, floor to ceiling tube support and chest stand purchased in contract year 1985/6. This assessment has demonstrated that the equipment is capable of carrying out an extensive range of examinations satisfactorily. (author).

49695 (STD-87-26) **Assessment of a Siemens basic radiological installation.** Department of Health, London (UK). Supplies Technology Div. Nov 1987. 59p. Source: Available from The British Library, Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ. Price Pound 25.00.

This report covers the assessment of a basic radiographic installation of Siemens equipment comprised of a 30kW 3 phase, medium frequency mean DC output generator, floating top bucky table, floor to ceiling tube support and chest stand purchased in contract year 1985/6. This assessment has demonstrated that the equipment is capable of carrying out an extensive range of examinations satisfactorily although the lack of any tilt for the cassette carriage of the vertical cassette stand imposed a limitation on examinations which require that facility to be available. (author).

49696 (STD-87-39) **Assessment of the Hitachi Sirius 125 B mobile X-ray Unit at three hospitals.** Department of Health, London (UK). Supplies Technology Div. Dec 1987. 41p. Source: Available from The British Library, Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ. Price Pound 10.00.

This report is based on the in-service assessment of the Hitachi Sirius 125B mobile X-ray Unit in 3 NHS hospitals. The unit has been used for a wide range of examinations and has received commendation from all users for image quality, output constancy and reliability. Criticisms have been made of certain operating features which include: (1) there is no interlock to prevent exposure if the state of charge of the capacitors is not sufficient for the factors selected. The usual green ready light is not provided and (2) the longgn wheel base makes manoeuvering in confined spaces difficult. The driving batteries must be kept fully charged to provide adequate power but the battery charge level indication lacks the means of ensuring this. The general performance of this unit for the competitive price at which it is offered by SMR makes it good value. (author).

49697 (STD-88-29) **Report on the use of the Palomex Vision One (Alpha-III) mammographic unit for breast cancer screening.** Department of Health, London (UK). Supplies Technology Div. Aug 1989. 43p. Source: Available from The British Library, Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ. Price Pound 25.00.

Revised version.

A report is given on the use of the Palomax Vision One mammographic unit for breast cancer screening. The report covers installation information, a technical assessment of the high voltage generator, source image receptor and patient positioning and a clinical assessment including comments from radiographers, design features, film processing record, equipment reliability, radiologists' report and mammographic phantom tests. (U.K.).

49698 (STD-89-19) **Report on the use of the Senographe 600TS (SENIXHF) mammographic unit for breast cancer screening.** Department of Health, London (UK). Supplies Technology Div. Aug 1989. 34p. Source: Available from The British Library, Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ. Price Pound 25.00.

A report is given on the use of Senographe 600TS mammographic unit for breast cancer screening. The report covers the description of the equipment, installation information, the technical assessment of the high voltage generator, source image receptor, patient positioning, film markers and safety features and a clinical assessment including radiographers' comments, equipment reliability and radiologists' report. (U.K.).

49699 Characterization of a whole body imaging technique for PET. Guerrero, T.M. (California Univ., Los Angeles, CA (USA). Div. of Nuclear Medicine); Hoffman, E.J.; Dahlbom, M.; Cutler, P.D.; Hawkins, R.A.; Phelps, M.E. *IEEE Transactions on Nuclear Science (Institute of Electrical and Electronics Engineers) (USA)*, 37(2): 676-680 (Apr 1990). (CONF-900143--: Institute for Electronic and Electrical Engineers (IEEE) nuclear science symposium, San Francisco, CA (USA), 15-19 Jan 1990).

An investigation of rapid whole-body PET scanning was performed with a view towards its eventual use in screening for metastatic lesions with ^{18}F-fluoride ion or ^{18}F-fluorodeoxyglucose (FDG). This paper presents longitudinal images of the body were formed using three techniques: simple 2-D projection images were formed by resorting the sinogram data. The images were created for a set of angles covering a full 180° to facilitate viewing in a cine format. The effects of summing over a number of angles per view and filtering to reduce noise were investigated. Limited-angle backprojection images were formed using a small range of angles and no reconstruction filter. The resulting volume was then sliced coronally to give planar images as a function of depth. Coronal images were also obtained after reconstruction with a standard filtered backprojection technique, but with no attenuation correction. All three processes provided surprisingly good images of diagnostic quality, which were obtainable in practical scan times.

49700 A study of data loss and mispositioning due to pileup in 2-D detectors in PET. Germano, G. (California Univ., Los Angeles, CA (USA). Div. of Nuclear Medicine); Hoffman, E.J. *IEEE Transactions on Nuclear Science (Institute of Electrical and Electronics Engineers) (USA)*, 37(2): 671-675 (Apr 1990). (CONF-900143--: Institute for Electronic and Electrical Engineers (IEEE) nuclear science symposium, San Francisco, CA (USA), 15-19 Jan 1990).

This paper reports the effect of event pileup investigated with a PET system which employs a 2-d detector-array system. Event pileup caused losses of resolution of 9%, 19.8% and 32% of the FWHM for 10, 20 and 30 mCi of positron emitter in the field of view (FOV), respectively. 9.4%, 18.7% and 28.1% of the data from the outer planes of the module were incorrectly placed in the inner

planes for 5, 10, and 15 mCi of positron emitter in the FOV, respectively. A simple model of the process was formulated and was found to be adequate to describe the major features of event pileup for a number of source configurations and a wide range of activities.

49701 3-D phantom to simulate cerebral blood flow and metabolic images for PET. Hoffman, E.J. (California Univ., Los Angeles, CA (USA). Nuclear Medicine Lab.); Cutler, P.D.; Digby, W.M.; Mazziotta, J.C. *IEEE Transactions on Nuclear Science (Institute of Electrical and Electronics Engineers) (USA),* 37(2): 616-620 (Apr 1990). (CONF-900143–: Institute for Electronic and Electrical Engineers (IEEE) nuclear science symposium, San Francisco, CA (USA), 15-19 Jan 1990).

A 3-dimensional brain phantom has been developed to simulate the activity distributions found in the human brain in the cerebral blood flow and metabolism studies currently employed in PET. The phantom has a single contiguous chamber and utilizes thin layers of lucite to provide apparent relative concentrations of 5, 1 and 0 for gray matter, white matter and ventricles, respectively, in the brain. The phantom and an ideal image set were created from the same set of data. Thus, the user has a basis for comparing measured images with an ideal image set which enables the user to make quantitative evaluation of the errors in PET studies with a data set similar to that obtained in patient studies.

49702 The feasibility of images reconstructed with the method of sieves. Veklerov, E. (Lawrence Berkeley Lab., CA (USA). Engineering Div.); Llacer, J. *IEEE Transactions on Nuclear Science (Institute of Electrical and Electronics Engineers) (USA),* 37(2): 835-841 (Apr 1990). DOE Contract AC03-76SF00098. (CONF-900143–: Institute for Electronic and Electrical Engineers (IEEE) nuclear science symposium, San Francisco, CA (USA), 15-19 Jan 1990).

The concept of sieves has been applied with the maximum likelihood estimator (MLE) to image reconstruction. While it makes it possible to recover smooth images consistent with the data, the degree of smoothness provided by it is arbitrary. It is shown that the concept of feasibility is able to resolve this arbitrariness. By varying the values of parameters determining the degree of smoothness, one can generate images on both sides of the feasibility region, as well as within the region. Feasible images recovered by using different sieve parameters are compared with feasible results of other procedures. One- and two-dimensional examples using both simulated and real data sets are considered.

49703 Three-dimensional imaging utilizing energy discrimination. Gunter, D.L. (Franklin McLean Memorial Research Institute, Dept. of Radiology, Univ. of Chicago, IL (US)); Hoffman, K.R.; Beck, R.N. *IEEE Transactions on Nuclear Science (Institute of Electrical and Electronics Engineers) (USA),* 37(3): 1300-1307 (Jun 1990). (CONF-900143–: Institute for Electronic and Electrical Engineers (IEEE) nuclear science symposium, San Francisco, CA (USA), 15-19 Jan 1990).

An algorithm is proposed for three-dimensional image reconstruction in nuclear medicine which uses scattered radiation rather than multiple projected images to determine the source depth within the body. Images taken from numerous energy windows are combined to construct the source distribution in the body. The gamma-ray camera is not moved during the imaging process. Experiments with both Tc-99m and Ga-67 demonstrate that two channels of depth information can be extracted from the low energy images produced by scattered radiation. By combining this technique with standard SPECT reconstruction using multiple projections the authors anticipate much improved spatial resolution in the overall three-dimensional reconstruction.

49704 (LA-UR–90-2562) **Oscillation onset in neural delayed feedback.** Longtin, A. Los Alamos National Lab., NM (USA). [1990]. 7p. Sponsored by U.S. DOE Management & Administration. DOE Contract W-7405-ENG-36. (CONF-901150–2: IEEE conference on neural information processing: natural and synthetic, Denver, CO (USA), 26-29 Nov 1990). Order Number DE90015057. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This paper studies dynamical aspects of neural systems with delayed negative feedback modelled by nonlinear delay-differential equations. These systems undergo a Hopf bifurcation from a stable fixed point to a limit cycle oscillation as certain parameters are varied. We show that their frequency of oscillation is robust to parameter variations and noisy fluctuations, a property that makes these systems good candidates for pacemakers. The onset of oscillation is postponed by both additive and parametric noise in the sense that the state variable spends more time near the fixed point. Finally, we show that a distributed delay (rather than a fixed delay) also stabilizes the fixed point solution. 40 refs., 2 figs.

49705 (NIRS-RSD–89) **Radioactivity survey data in Japan, part 2: Dietary materials.** National Inst. of Radiological Sciences, Chiba (Japan). Mar 1990. 30p. Order Number DE90520441. Source: NTIS (US Sales Only), PC A03/MF A01.

The publication is aimed at providing radioactivity survey data in environmental and dietary materials in Japan. Part 2 gives dietary materials, consisting of total diet, rice, milk, vegetables, sea fish, freshwater fish, shellfish, and seaweeds. Samples were collected from 37 sampling locations during the period between August 1988 and March 1989, and were sent to the Japan Chemical Analysis Center for radiochemical analysis. Strontium-90 and cesium-137 in these dietary materials are tabulated. The maximum concentrations of strontium-90 and cesium-137 were as follows: 0.12±0.012 Bq/p·d and 0.16±0.012 Bq/p·d, respectively, for total diet; 0.0000±0.0084 Bq/Kgwet and 0.42±0.019 Bq/Kgwet for rice (producing districts); 0.0000±0.0084 Bq/Kgwet and 0.048±0.0091 Bq/Kgwet for rice (consuming districts); 0.059±0.008 Bq/l and 0.26±0.013 Bq/l for milk (producing districts for domestic program); 0.14±0.013 Bq/l and 0.19±0.011 Bq/l for milk (producing districts for WHO program); 0.057±0.008 Bq/l and 0.15±0.010 Bq/l for milk (consuming districts); 0.97±0.032 Bq/Kgwet and 0.062±0.010 Bq/Kgwet for vegetables (producing districts); 0.52±0.024 Bq/Kgwet and 0.051±0.009 Bq/Kgwet for vegetables (consuming districts); 0.043±0.010 Bq/Kgwet and 0.34±0.017 Bq/Kgwet for sea fish; 0.96±0.032 Bq/Kgwet and 0.066±0.009 Bq/Kgwet for freshwater fish; 0.017±0.019 Bq/Kgwet and 0.027±0.011 Bq/Kgwet for shellfish; and 0.031±0.011 Bq/Kgwet and 0.12±0.10 Bq/Kgwet for seaweeds. Yearly changes in the concentrations of both strontium-90 and cesium-137 from 1985 through 1989 are given in figures. (N.K.).

49706 (AD-A–222647/0/XAB) **Preparation of potential radioprotective agents derived from aminothiols. Annual report, 16 July 1985-15 July 1986.** Ternay, A.L. Texas Univ., Arlington, TX (USA). Dept. of Chemistry. Sep 1985. 45p. Contract DAMD17-84-C-4137. Source: NTIS, PC A03/MF A01.

The purpose of this program is to prepare substances containing known (and potentially) radioprotective fragments bound to small biomolecules. They are to be prepared in small quantities. These

compounds are then to be submitted for biological evaluation. The method chosen to link the radioprotective fragment (usually an aminothiol) to the biomolecule is to join them via a disulfide bond (-S-S-). During much of this year particular emphasis has been placed upon the synthesis of potential radioprotective steroids. Two very different methodologies have been used for the synthesis of unsymmetric disulfides. One involves the reaction of a thiol with the thiolsulfinate derived from a different thiol. This method has the potential for producing the desired (target) compound in high purity with a minimum of side products. During the reporting fifteen (15) compounds were submitted for biological evaluation. Seven of these are steroid-containing substances, two are phenothiazines and three are polymer-bound materials. The latter contain a radioprotective agent (e.g., WR-1065) bound to a polymer by an ionic bond. The polymer which was used was the commercially-available Dowex 50W-X8, an ion-exchange resin containing free sulfonic acid residues.

49707 (AD-A–222722/1/XAB) **Survival of Chinese hamster ovary cells following ultrahigh-dose-rate electron and bremsstrahlung radiation. Final report, September 1988-February 1989.** Holahan, P.K.; Meltz, M.L. Texas Univ., San Antonio, TX (USA). Health Science Center. Apr 1990. 13p. Contract F33615-87-D-0626. Source: NTIS, PC A03/MF A01.

The objective of this research was to measure cellular effects of ultrahigh dose rate X rays associated with high-power microwave devices. The intent was to detect differences in effect of ultrahigh dose-rate X rays compared to conventional dose-rate X rays at equivalent total doses. Cell survivability was used as the measure. No differences were noted until a dose of 4 Gray or greater was achieved.

49708 (AD-A–222880/7/XAB) **Effects of ionizing radiation on the performance of selected tactical combat crews. Technical report, 12 March 1986-30 October 1987.** Dore, M.A.; Anno, G.H. Pacific-Sierra Research Corp., Los Angeles, CA (USA). 1 May 1990. 138p. Contract DNA001-85-C-0352. (PSR–1846). Source: NTIS, PC A07/MF A01.

A general model is developed for characterizing the expected performance of four selected types of tactical army combat crews when the individual crewmembers function at degraded performance levels due to acute exposure to ionizing radiation. The model is also applicable to other situations that degrade individual crewmember performance. The results provide performance data for larger scale U.S. Army models that simulate battlefield conflicts where nuclear weapons might be employed. Performance-level data are generated as a function of dose and time after exposure for each crew type.

49709 (AD-A–955922/0/XAB) **Mechanism of action of radiation-protective agents: in-vivo distribution and metabolism of cysteamine-S-phosphate (MEAP). Annual report, 1 July 1968-30 June 1969.** Shapiro, B.; Kollman, G. Albert Einstein Medical Center, Philadelphia, PA (USA). Radiation Research Lab. 30 Jun 1969. 27p. Contract DADA17-67-C-7165. Source: NTIS, PC A03/MF A01.

The appearance of a new class of protective agents, the aminoalkyl-thio-phosphates (or aminoalkyl-phosphorothioates), provided the opportunity to re-evaluate these proposed mechanisms of action. The new compounds are less toxic than the aminoalkylthiols and provide equal or better protection. A study of the distribution and metabolism of one of these agents, aminoethylthiophosphate or cysteamine-S-phosphate (MEAP) was undertaken to test the hypotheses arrived at in the mechanism studies of mercaptoethylguanidine and bis(2-guanidoethyl) disulfide. In this study, the protective agent MEAP labelled with P-32 and S-35 was analyzed in pure solutions, in homogenates of mouse tissues in vitro and in homogenates of tissues from mice given protective doses of MEAP in vivo. A small radiation mortality study was run concurrently with the distribution and metabolism studies in order to be sure that the analyzed mice were really being studied under conditions of protection.

49710 (AERE-R–12810) **Uranium and human diet: a literature review.** Long, S.E. UKAEA Harwell Lab. (UK). Environmental and Medical Science Div. Dec 1987. 30p. Source: Available from H.M. Stationery Office, London, price Pound 10.00.

Uranium is present in the environment from industrial activities, nuclear power generation and from primordial sources. This report discusses a survey of the literature of the occurrence of uranium in the foodchain and human diet. The dietary absorption and human metabolism of uranium present in foodstuffs are discussed. (author).

49711 (ANS-R–598-2) **Incorporation of experimental data, review and documentation of the SPADE database.** Coughtrey, P.J.; Cramp, T.J.; Grezo, C.A.B.; Kirton, J.A.; Mitchell, N.G. Associated Nuclear Services, Epsom (UK); Ministry of Agriculture, Fisheries and Food, London (UK). Aug 1987. 155p. Project MAFF 410;ANS Job 598. Source: Available from The British Library Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ.

Animal models used in the SPADE suite of codes are reviewed. This review covers models originally specified and their current form. Recommendations made in "Radionuclide Distribution and Transport in Terrestrial and Aquatic Ecosystems" are also considered. Elements included in the review are Cs, Ce, I, Pu, Ru, Sr and Te. A review of nuclide independent default parameters is undertaken, including stable iodine ingestion, soil ingestion, edible plant yields, grazing areas and consumption rates of feed. Values of rate coefficients obtained from experimental work are presented, together with Ce, Ru, Sr and Cs values of rate coefficients for transfers from soil to root, root to shoot and soil to shoot for Lolium perenne grown on Sizewell soil and Mendip loam. For Ce, Sr and Cs values of rate coefficients for transfer in Sizewell soil and Mendip loam and for Ru values of rate coefficients for transfers in Mendip loam are presented. (Author).

49712 (IAEA-R–4297-F) **Retention of alkaline earth elements in man: Final report for the period 1 April 1986 - 14 May 1989.** Newton, D. UKAEA Harwell Lab. (UK); International Atomic Energy Agency, Vienna (Austria). Jun 1990. 67p. Order Number DE90636742. Source: NTIS (US Sales Only), PC A04/MF A01; OSTI; INIS.

The data on human metabolism and long-term retention of alkaline earth elements (^{133}Ba injected into six healthy male volunteers at age 25-81 y and ^{45}Ca and ^{85}Sr received by one healthy male volunteer) are presented. Excreta were collected for 2-3 weeks after injection of the tracer into an antecubital vein. Activity in urine, ashed faeces and early samples of blood plasma was determined by gamma-ray scintillation spectrometry. Whole body retention has been assessed through serial measurements of body radioactivity. The injected ^{133}Ba apparently became mainly skeletal within several days, much earlier than predicted by the ICRP model. The whole-body retention at 32 d ranged from 5 to 14%, the rate of loss correlating with the excretory plasma clearance rate. No age-related trends were identified in the metabolism of Ca and Sr. 2 refs, 2 figs.

49713 (IPEN-PUB–174) **"In vitro" and "in vivo" studies 2,6 - diisopropyl-fenil-carboilmethyl iminodiacetic acid labeled with^{99m}Tc (Disida -^{99m}Tc).** Martinez, D.Y.F.; Barbosa, M.R.F.F. de; Muramoto, E.; Achando, S.S.; Silva, C.P.G. da. Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo, SP (Brazil). Jul 1988. 11p. (In Portuguese). Order Number DE90639714. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The "in vivo" and "in vitro" studies on DISIDA -^{99m}Tc at the hepatobiliary level were made. The binding of DISIDA -^{99m}Tc to plasmatic proteins and the fraction at which this binding occurs were determined. The distribution coefficient in n-octanol/saline solution was 0.41 showing the lipophilicity of the compound. The images in rats show the biological distribution as well as the hepatobiliary clearance of the radiopharmaceutical under its unmetabolized form. (author).

49714 (JAERI-M–90-076) **Isolation and properties of plasmids from Deinococcus radiodurans Sark.** Sjarief, S.H. (National Atomic Energy Agency, Jakarta (Indonesia)); Kikuchi, Masahiro; Kurita, Hiromi; Kitayama, Shigeru; Watanabe, Hiroshi. Japan Atomic Energy Research Inst., Tokyo (Japan). May 1990.

20p. Order Number DE90520219. Source: NTIS (US Sales Only), PC A03/MF A01.

Radioresistant bacterium, Deinococcus radiodurans, can repair completely almost all of DNA damages including double strand breaks induced by gamma-rays up to about 5 kGy. In order to reveal the repair mechanism, it is necessary to develop a cloning vector available for the genetic analysis. We tried to isolate plasmids from D.radiodurans Sark strain. In the present paper the isolation and properties of plasmids were described. (author).

49715 (MIC–90-03615/XAB) **Health effects of ionizing radiation.** Pathak, B. Canadian Centre for Occupational Health and Safety, Hamilton, ON (Canada). ©1989. 24p. (SSC-CC–273-2/89-27E). Source: NTIS, PC EE07/MF E01.

This publication provides basic information on the possible health hazards of ionizing radiation. The publication includes a definition of ionizing radiation, the sources and types, occurrences of internal and external exposure, definitions of dose levels, the health effects, effects of exposure including genetic effects, combined exposures of ionizing radiation and chemicals, and acceptable doses. A glossary of technical terms is included.

49716 (N–90-25031) **Improved model for solar cosmic ray exposure in manned Earth orbital flights.** Wilson, J.W.; Nealy, J.E.; Atwell, W.; Cucinotta, F.A.; Shinn, J.L.; Townsend, L.W. National Aeronautics and Space Administration, Hampton, VA (USA). Langley Research Center. Jun 1990. 14p. (NASA-TP–2987;L–16759;NAS–1.60:2987). Source: NTIS, PC A03/MF A01.

A calculational model is derived for use in estimating Solar cosmic ray exposure to critical body organs in low-Earth orbit at the center of a large spherical shield of fixed thickness. The effects of the Earth's geomagnetic field and the astronauts' self-shielding are evaluated explicitly. The geomagnetic field model is an approximate tilted eccentric dipole with geomagnetic storms represented as a uniform-impressed field. The storm field is related to the planetary geomagnetic index K(sub p). The code is applied to the Shuttle geometry using the Shuttle mass distribution surrounding two locations on the flight deck. The Shuttle is treated as pure aluminum and the astronaut as soft tissue. Short-term, average fluence over a single orbit is calculated as a function of the location of the lines of nodes or long-term averages over all lines of nodes for a fixed inclination.

49717 (RERF-TR–4-90) **Frequency of malignant tumors during the first two decades of life in the offspring (F_1) of atomic bomb survivors.** Yoshimoto, Yasuhiko; Neel, J.V.; Kato, Hiroo; Mabuchi, Kiyohiko; Schull, W.J.; Soda, Midori; Eto, Ryozo. Radiation Effects Research Foundation, Hiroshima (Japan). May 1990. 25p. Order Number DE90520241. Source: NTIS (US Sales Only), PC A03/MF A01.

The incidence of cancer prior to age 20 has been determined in children born to atomic bomb survivors and to a suitable comparison group. Tumor ascertainment was through death certificates and the tumor registries maintained in Hiroshima and Nagasaki. The rationale for the study stemmed from the evidence that a significant proportion of childhood tumors such as retinoblastoma and Wilms' tumor arise on the basis of a mutant gene inherited from one parent plus a second somatic cell mutation involving the allele of this gene. Gonadal radiation doses were calculated using the recently established DS86 system, supplemented by an ad hoc system for those children whose parents' (one or both) DS86 dose could not be computed but for whom a dose could be developed on the basis of the available information. The total data set consisted of: (1) a cohort of 31,150 liveborn children, one or both of whose parents received $\geq$ 0.01 Sv of radiation at the time of the A-bombings (an average conjoint gonad exposure of 0.435 Sv), and (2) two suitable comparison groups, totaling 41,066 children. A total of 92 cancer cases at age less than 20 years was confirmed; 49 and 43 cases, respectively, in the 0 Sv and $\geq$ 0.01 Sv groups. A multiple linear regression analysis revealed no increase in malignancy in the children of exposed parents. However, examination of the data suggested that only 3.0 % to 5.0 % of the tumors of childhood observed in the comparison groups are associated with an inherited genetic predisposition that would be expected to exhibit an altered frequency if the parental mutation rate were increased. These is thus far no confirmation of the positive findings of Nomura in a mouse system. (author).

49718 (MIC–90-03624/XAB) **Beryllium disease: A summary of the occupational health concern.** Bertolini, R. Alberta Public Safety Services, Edmonton, AB (Canada). ©1989. 9p. (SSC-CC–273-2/89-23E). Source: NTIS, PC EE07/MF E01.

Beryllium is a metal widely used in industry because of its light weight, high melting point, high strength, and good electrical conductivity. Exposure to the fumes and dusts of beryllium and its compounds or alloys causes various diseases that affect several organs of the body. This report describes the industrial uses of beryllium; the acute and chronic phases of the disease; diagnosis and treatment; and prevention.

49719 (PB–90-245069/XAB) **Inhalation toxicology of combined acid and soot particles. Final report.** Phalen, R.F.; Kleinman, M.T. California Univ., Irvine, CA (USA). Dept. of Community and Environmental Medicine. Apr 1989. 56p. Contract ARB-A5-129-33. Source: NTIS, PC A04/MF A01.

As a result of a request by the California Air Resources Board for proposals dealing with fine particles, an innovative inhalation toxicology study, using a reliable animal model, was designed and successfully conducted. The objective of the study was to evaluate the respiratory system toxicity of both diesel-engine-generated and propane-flame-generated fine carbon particles, especially when an acid mixture of the type observed in California's air was also present. Atmospheres were generated into stainless-steel exposure chambers and healthy rats breathed the pollutants nose-only for 5 hours per day for 5 consecutive days. The atmospheres studied included dilute diesel exhaust soot + nitric acid + sulfuric acid, and propane-flame-generated carbon soot + nitric acid + sulfuric acid. Groups of rats were also exposed to the nitric and sulfuric acid mixture, diesel soot, or propane soot in order to examine the effects of the components of the soot + acids mixtures. Controls for exposure were rats exposed using the same schedule to purified air.

49720 (PB–90-245077/XAB) **Acid air pollutant mixtures: Respiratory system responses and effects of exercise.** Mautz, W.J.; Kleinman, M.T.; Finlayson-Pitts, B. California Univ., Irvine, CA (USA). Dept. of Community and Environmental Medicine. Oct 1989. 141p. Contract ARB-A6-148-33. Source: NTIS, PC A07/MF A01.

The study involved evaluation of rats exposed (at rest or while exercising) via a nose-only exposure system to various combinations of pollutants. The duration of exposure was four hours. The effects of O3 alone were compared to a combination of O3, HNO3 and H2SO4 and to a combination of O3 and HMSA. The comparisons were made at two concentration levels. Target concentrations for the lower levels were 0.20 ppm O3, 0.50 mg/cu m HNO3, 0.25 mg/cu m H2SO4 and 0.25 mg/cu m HMSA while higher concentration levels were twice these values. The toxic effects evaluation included: (1) Pulmonary function measures consisting of breathing frequency, tidal volume, minute ventilation, oxygen consumption, ventilation equivalent for oxygen and body temperature; (2) Histopathological analysis of nasal and lung epithelium which included: (a) microscopic analysis of nasal and lung tissue sections for qualitative analysis of injury and quantifying the injury as lesion areas; and (b) measurement of cell turnover by autoradiography as evidence of injury to the lining epithelium; (3) Biochemical analysis of pulmonary surfactant (PS) by Fourier transform infrared spectrometry (FTIR), ultraviolet spectrometry and gas chromatographic analysis for fatty acid composition of the PS.

49721 (PB–90-247347/XAB) **Influence of experimental pulmonary emphysema on toxicological effects from inhaled nitrogen dioxide and diesel exhaust. Research report, January 1984-September 1987.** Mauderly, J.L.; Bice, D.E.; Cheng, Y.S.;

Gillett, N.A.; Henderson, R.F. Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM (USA). ©Feb 1990. 61p. Source: NTIS, PC A04/MF A01.

The hypothesis tested in the project was that rats with preexisting experimentally-induced pulmonary emphysema were more susceptible than rats with normal lungs to the adverse effects of exposure to NO(sub 2) or diesel exhaust. Rats were exposed by inhalation seven hr/day, five day/wk, for 24 months to NO(sub 2) at 9.5 ppm, or to diesel exhaust at 3.5 mg soot/cu m, or to clean air. Pulmonary emphysema was induced in one-half of the rats by intratracheal instillation of elastase, six weeks before exposures. Nonneoplastic endpoints were evaluated after 12, 18, and 24 months of exposure. Nitrogen dioxide exposure of normal rats caused mild epithelial hyperplasia and inflammation in proximal alveoli. Significant interactions between the influences of emphysema and nitrogen dioxide were demonstrated to be additive for four parameters (out of 61 parameters). Diesel-exhaust exposure of normal rats caused progressive, focal inflammation, and epithelial proliferation. The final soot lung burden was only one-third of that in nonemphysematous lungs.

49722 (PB–90-248915/XAB) **Integrated criteria document: Asbestos effects. Appendix.** Montizaan, G.K.; van der Heijden, C.A. Rijksinstituut voor Volksgezondheid en Milieuhygiene, Bilthoven (Netherlands). May 1989. 130p. (RIVM–758473013). Source: NTIS, PC A07/MF A01.

See also PB–90-248907. North American Continent sales only. All others National Institute of Public Health and Environmental Protection, P.O. Box 1, 3720 BA Bilthoven, The Netherlands.

Asbestos is a general term applied to certain fibrous forms (asbestiform varieties) of silicate minerals, with long thin separable fibers or fibrils possessing high tensile strength and flexibility. Current use of the term asbestos is restricted to six fibrous silicates: chrysotile, crocidolite, amosite, anthophyllite, tremolite and actinolite. There are many other asbestiform minerals, with crystal-forming properties similar to asbestos, that occur naturally. They usually do not possess the same physical-chemical properties as asbestos, and hardly ever occur in sufficient quantities for exploitation. Examples of commercially applied asbestiform minerals are attapulgite and sepiolite. There are also many asbestiform man-made materials, e.g. glass wool, rock wool, ceramic fibers. The focus of the document will be on asbestos; some attention will be paid to non-asbestos fibrous materials, but the reviewed literature on the latter subject is not exhaustive.

49723 (PB–90-252636/XAB) **Pilot study on international information exchange on dioxins and related compounds. Final report, 1985-1989.** McNelis, D.N.; Bretthauer, E.W.; Kutz, F.W.; Bottimore, D.P.; Duda, S.W. North Atlantic Treaty Organization, Brussels (Belgium). Committee on the Challenges of Modern Society. Dec 1989. 646p. Contract EPA-68-D9-0166. (NATO/CCMS–170). Source: NTIS, PC A99/MF A04.

Portions of this document are not fully legible.

The Pilot Study on International Information Exchange on Dioxins and Related Compounds was initiated in 1985 to apply the cooperative efforts of numerous nations to address the problems associated with CDDs, CDFs, and related compounds. The Pilot Study conducted activities to examine exposure and risk assessment, technology assessment, and management of accidents involving these compounds. One of the activities of the Pilot Study was to compile, analyze, and distribute information on research projects addressing these compounds. The report describes some of the research activities that were underway between the years of 1985-1989. The report also contains detailed analyses of funding priorities and research emphasis among NATO nations.

49724 (PB–90-255050/XAB) **Integrated criteria document: PAHs.** Slooff, W.; Janus, J.A.; Matthijsen, A.J.C.M.; Montizaan, G.K.; Ros, J.P.M. Rijksinstituut voor Volksgezondheid en Milieuhygiene, Bilthoven (Netherlands). Nov 1989. 114p. (RIVM–758474011). Source: NTIS, PC A06/MF A01.

U.S., Canada and Mexico sales only. All others refer to National Institute of Public Health and Environmental Protection, P.O. Box 1, 3720 BA Bilthoven, The Netherlands.

The document contains data on polycyclic aromatic hydrocarbons (PAHs) with regard to sources and distribution, risks based on balancing exposure levels and harmful concentrations, the technical possibilities to reduce these risks and the business economic consequences of these measures. The PAH-group consists of several hundreds of organic substances composed of two or more benzene rings which especially receive considerable attention because of their alleged carcinogenic properties.

49725 (PB–90-255068/XAB) **Appendix to Report No. 758474011. Integrated criteria document PAH: Republication of Addendum to Report No. 758474007, March 1989. Effects of 10 selected compounds.** Montizaan, G.K.; Kramers, P.G.N.; Janus, J.A.; Posthumus, R. Rijksinstituut voor Volksgezondheid en Milieuhygiene, Bilthoven (Netherlands). Nov 1989. 196p. Source: NTIS, PC A09/MF A02.

U.S., Canada and Mexico sales only. All others refer to National Institute of Public Health and Environmental Protection, P.O. Box 1, 3720 BA Bilthoven, The Netherlands.

Polynuclear aromatic hydrocarbons (PAHs) are compounds consisting of carbon and hydrogen only, with two or more benzene rings in the molecule. The arenes and alkylated arenes belong to this group, whereas the aza-, imino-, nitro-, carbonyl-, oxa-, thio- and polychloro-arenes do not. The document, part of the Integrated Criteria Document PAH, consists of a detailed evaluation of the effects on man and environment of only 10 PAH, all belonging to the group of arenes. The given selection implies a severe restriction of the toxicological evaluation of PAH, which will be explained. Of all polynuclear aromatic compounds, the arenes are probably not the most harmful ones to man. Many arenes are known to be carcinogenic, however some nitro-arenes have been shown to have a much higher potency for causing genetic damage in mutagenicity tests than the arenes.

49726 Nitrate reductase is induced in red spruce by NO_2 and HNO_3 vapor. Norby, R.J. (Oak Ridge National Lab., TN (USA)); Hanson, P.J.; Weerasuiya, Y. *Plant Physiology, Supplement (USA)*, 89(4): 20 (Apr 1989).

The activity of nitrate reductase (NR) in needles of red spruce (Picea rubens Sarg.) trees is normally very low: 220 $nmol \cdot g^{-1} \cdot h^{-1}$ in 1-year-old nursery-grown seedlings and 47 $nmol \cdot g^{-1} \cdot h^{-1}$ in plants excavated from a high-elevation spruce forest. The assimilation of nitrogen oxide pollutants absorbed from the atmosphere by red spruce trees may, therefore, require that NR is induced in the needles. To test for induction of NR, 1-year-old, nursery-grown red spruce seedlings were exposed to NO_2, HNO_3 vapor, or acid mist containing nitrate, and the activity of NR in needles was measured using an in vivo assay. One day after exposure to NO_2 (75 $nl \cdot l^{-1}$) began, NR activity had increased to 765 $nmol \cdot g^{-1} \cdot h^{-1}$, more than 3 times that of unexposed control plants. During the 7-day exposure, NR activity of the treated seedlings declined 36%, but it remained significantly higher than that of controls. One day after exposure ended, NR activity returned to the control level. Forest-frown seedlings exhibited a similar response to NO_2, but at a much lower level. Nitric acid vapor (75 $nl \cdot l^{-1}$) also induced NR in red spruce needles, and the pattern and magnitude of response were similar to that with NO_2, except that the NR activity did not return to control levels until 2 days after exposure ended. Exposure of seedlings to simulated acid mist containing nitrate (pH 3.5 and pH 5.0) did not result in a significant change in NR activity. These results indicate that red spruce is capable of assimilating NO_2 and HNO_3 vapor, and that hypotheses of forest decline based on foliar assimilation of pollutant nitrogen oxides are tenable.

5604 Other Environmental Pollutant Effects

49727 (HWC/HP–H46-2/89-150E) **Electric and magnetic fields and your health: A report of the Working Group on Electric and Magnetic ELP Fields.** Health and Welfare Canada, Ottawa, ON (Canada). May 1989. 34p. (MICROLOG–90-03856). Source: PC Health and Welfare Canada, Communications Directorate, Brooke Claxton Bldg, Ottawa, ON, CAN K1A 0K9; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1. Prices: PC N/C; MF $10 CAN.

Generation, transmission and use of electricity are associated with production of electric and magnetic fields at 60 Hz. People are exposed to these fields not only when they are under high-voltage

lines, but also in their homes, because such field are produced by distribution lines, house wiring and by all electrical appliances and other electrical devices. The available scientific evidence on health effects of these fields is inconsistent and inconclusive. Some epidemiological studies suggest a possible association between increased risks of certain cancers and exposure to magnetic and/or electric fields. Also, some experiments with animals and cells show that these fields can interact with biological systems. It has not been well established, but some of these interactions may have detrimental consequences. Some of the experimental data indicate that a stronger field is not necessarily more dangerous. Some effects occur for weaker fields, but not for stronger ones. Recently an increased research effort has been undertaken with the hope of resolving these health issues. 11 refs., 2 figs.

49728 (MIC–90-03619/XAB) **Radiofrequency radiation in the workplace.** Charron, D. Canadian Centre for Occupational Health and Safety, Hamilton, ON (Canada). ©1989. 21p. (SSC-CC–273-2/89-24E). Source: NTIS, PC EE07/MF E01.

French ed.

Communications, industry and medicine are increasingly using radiofrequency electromagnetic fields, leading to a greater need to understand the known and possible health consequences of exposure to these fields. This publication briefly summarizes the current state of knowledge concerning health effects of exposure to radiofrequency electromagnetic fields. The publication includes definition of radiofrequency electromagnetic radiation, those at risk, the thermal and non-thermal health effects, the safety hazards, the exposure limits, and methods of control or limiting. Summaries of the existing and proposed guidelines are also included.

49729 (OH/RD–89-259-K) **Exposure system for animal studies involving high-level 60-Hz magnetic fields.** Harvey, S.M. Ontario Hydro, Toronto, ON (Canada). Research Div. 27 Oct 1989. 16p. (MICROLOG–90-03521). Source: PC Ontario Hydro Research Division, Records Clerk, Bldg. KR 107, 800 Kipling Ave., Etobicoke, ON, CAN M8Z 5S4; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1. Prices: PC $10.00 CAN; MF $10 CAN.

The design of an animal exposure chamber used in the Ontario Hydro Magnetic-Field Rodent Reproductive Study (MFRRS) has been reviewed and modified for use in studies requiring an exposure to high-strength 60-hertz magnetic fields. New design criteria and specifications are described, and one proposal offered was to obtain the various parts of the chambers from outside suppliers where possible, but to assemble and test the coil driver circuits in-house. 1 ref., 9 figs.

49730 (PNL-SA–18290) **The role of elf field dosimetry and bioeffects mechanisms in relating in vitro to in vivo exposures.** Miller, D.L. Pacific Northwest Lab., Richland, WA (USA). Jun 1990. 7p. Sponsored by U.S. DOE Conservation & Renewable Energy. DOE Contract AC06-76RL01830. (CONF-9006269–1: 12. annual meeting of the bioelectromagnetics society, San Antonio, TX (USA), 10-14 Jun 1990). Order Number DE90017240. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Animal exposures to ELF electric or magnetic fields are typically described in terms of the external field direction and RMS magnitude. Within the animal, the magnetic field exists virtually unperturbed by the body, while the external electric field is greatly attenuated. In addition, electrical fields and currents are induced inside any conducting body exposed to ELF electric or magnetic fields, and these are strongly dependent on the size, shape and conductivity of the object. In vitro, similar considerations apply to the volume of cell suspension, but a greater degree of control is possible in the relative magnitudes of electric field, induced current and magnetic field in the media. The goal of this presentation is to outline general aspects of this interaction and to compare the biophysical dosimetry for animals to the situation which pertains for in vitro experiments. Such information is critical for rational development of exposure systems and selection of appropriate exposure parameters. Since one major objective of in vitro experiments is to simulate the bioeffects situation in vivo, dosimetric information is needed for any extrapolation of laboratory in vitro or animal experimental results to environmental exposures of humans. In addition, this information is needed for the consideration of potential mechanisms of biological effects of ELF fields. 7 refs., 3 figs., 1 tab.

57 HEALTH AND SAFETY

49731 (UCRL-ID–104571) **EE Microfabrication facility toxic gas system: A probabilistic risk assessment using human reliability analysis methods.** Banks, W.W.; Harmon, K. Lawrence Livermore National Lab., CA (USA). Jul 1990. 152p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE90018005. Source: NTIS, PC A08/MF A01 - OSTI; GPO Dep.

The focus of this report is narrowly directed at a theoretical hydrogen gas release in an unventilated vault as a result of an accident and the vents and behaviors necessary to allow such an event to propagate into one of high consequence. This report describes the "worst case" probability and effect (consequence) of a human-error-initiated H_2 leak in the Building-153 gas vault. The primary focus and concern of this report is to generate a probability estimate of an H_2 release based upon the likelihood of task-critical human error in combination with hardware/electrical failures. The focus of this paper is narrowly directed at a hydrogen gas release in an unventilated vault as a result of an accident and the antecedent events and behaviors necessary to allow such an event to propagate into high consequence (explosion). The authors of this report believe that the method used to calculate the risk estimate can be generalized to several different types of compressed gas cylinder releases caused by human error. Our approach is therefore intentionally broad to include the anticipated generalizations to other similar situations where the same assumptions and conditions exist. 33 refs., 4 figs.

49732 (DOE/ER/14057–1) **New approaches to estimation of magnetotelluric parameters: Annual report, 1 August 1989–31 July 1990.** Egbert, G.D. (Oregon State Univ., Corvallis, OR (USA). Coll. of Oceanography); Booker, J.R. Oregon State Univ., Corvallis, OR (USA). Coll. of Oceanography. [1990]. 28p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-89ER14057. Order Number DE90016188. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This document proposed the development and application of some new statistical techniques for improving the collection and analysis of wide-band magnetotelluric (MT) data. The principle goal of our work is to develop and implement fully automatic single station and remote reference impedance estimation schemes which are robust, unbiased and statistically efficient. The initial proposal suggested several extensions to the regression M-estimates to better allow for non-stationary and non-Gaussian noise in both electric and magnetic field channels (measured at one or more simultaneous stations). A second goal of the proposal was to develop formal, reliable procedures for estimating undistorted 2-d strike directions and to develop statistics for assessing the validity of the 2-d assumption that are unaffected by near surface static distortion effects. To test and validate the methods, working with data selected from a series of over 200 wide-band MT sites was proposed. For the current budget period, setting up a data base, and completing development and initial testing of the single station and remote reference methods outlined in the proposal is suggested. 8 refs., 13 figs.

49733 (DOE/ER/14064–1) **Two and three dimensional magnetotelluric inversion: Annual progress report.** Washington Univ., Seattle, WA (USA). [1990]. 15p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-89ER14064. Order Number DE90016187. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper is an annual progress report. In prior reporting periods, a numerically efficient algorithm to invert large magnetotelluric (MT) data sets for conductive structures has been developed. The method is iterative and approximates lateral derivatives of the electric and magnetic fields inside the model by their values from the previous iteration. The model is made unique by minimizing a function which measures the complexity of the model. The purpose is to find the model with the least structure for a given level of misfit to the data. The method is called the Rapid Relaxation Inverse (RRI). During the past year, effort has been split between improving the two-dimensional (2D) version of our code and developing a three-dimensional (3D) version. The 2D work has involved a thorough study of synthetic data generated from known models with random noise added. This study resulted in the implementation of three stabilization schemes. One which operates in model space and damps efforts by the algorithm to make the model rough. The second operates in data space and down-weights data with large residuals at each iteration. This means that data that is easy to fit will be fit first. 4 refs., 13 figs.

49734 (EUR–12229) **CEC project Mirage - Second phase on migration of radionuclides in the geosphere: Second summary progress report (Work period 1988).** Come, B. (ed.) (Commission of the European Communities, Brussels (BE)). Commission of the European Communities, Luxembourg (Luxembourg). 1989. 22p. Source: NTIS (US Sales Only), PC A03/MF A01.

A second phase of the Community coordinated project Mirage (migration of radionuclides in the geosphere) was launched in 1986. The present report brings together reviews of work done in the four research areas of this phase for 1988, and therefore constitues an update of the previous report, ref. EUR 11589. This project is part of the CEC R and D programme on radioactive waste management (1985-89).

A compilation of 26 reports from a Canadian geological research program investigating frontier areas in British Columbia is presented. The subjects of the reports include stratigraphy, geologic structures, geologic formations, sedimentology, paleontology, petroleum source rock potential, palynology, and geochronology. The geographic regions studied are mostly in the Queen Charlotte Islands. Separate abstracts have been prepared for 4 of the reports in this compilation.

49736 (GSC–Bull-390) **Uppermost Devonian and lower Carboniferous stratigraphy, sedimentation, and diagenesis, southwestern District of Mackenzie and southeastern Yukon Territory (NTS 95 B, C, F, and G).** Richards, B.C. (Inst. of Sedimentary and Petroleum Geology, Calgary, AB (Canada)). Geological Survey of Canada, Ottawa, ON (Canada). 1989. 143p. (MICROLOG–90-02989). The geologic formations in the study region consist of a succession of continental terrace wedge deposits comprising a shale lithosome that intertongues eastward with 3 successions of slope/shelf, platform/ramp, and delta facies. Basinal and prodelta shale in the Besa River Formation constitutes the eastern part of the shale lithosome, and the lower Banff, Clausen, and Golata formations are its eastern tongues. The lower Banff is mainly basinal shale, but the slope/shelf upper Banff is mainly shelf limestone and sandstone. Graded beds dominate the slope/shelf facies of the western, lower Yohin, which overlies mainly the Besa River; the upper Yohin in the east is chiefly shallow shelf sandstone. Each of the 4 carbonate buildups present successively prograded farther westward. Platform shelf limestone constitutes most of the Pekisko, which abruptly overlies the upper Banff. The Prophet ramp and platform facies, overlying Besa River and Clausen shale, comprise slope spiculite and limestone that both underlie and pass eastward into more proximal ramp and platform deposits of Formation F and the Flett. The Golata, mostly prodelta shale, conformably overlies the Prophet and Flett. Siliclastics in this succession had a northern provenance. The calcite cement was precipitated in the meteoric-phreatic and subsurface zones; spicules provided silica for chert. The detailed information in this report will contribute to the accurate assessment of petroleum resources in this frontier region. Anomalies in the stratigraphic nomenclature have been corrected, placing the lithostratigraphy on a firm basis. Detailed paleontological control essential to local and interregional correlation is also presented. 248 refs., 89 figs., 1 tab.

49737 (IS-IPRT–5) **Iowa State Mining and Mineral Resources Research Institute final report, July 1, 1988–June 30, 1989.** Iowa State Univ. of Science and Technology, Ames, IA (USA). Iowa State Mining and Mineral Resources Research Inst. Sep 1989. 175p. Sponsored by U.S. Department of the Interior. DOE Contract W-7405-ENG-82. Grant G1184119. Order Number DE90017513. Source: NTIS, PC A09/MF A01 - OSTI; GPO Dep.

This Final Report describes the activities of the Iowa State Mining and Mineral Resources Research Institute (ISMMRRI), at Iowa State University for the period July 1, 1988 to June 30, 1989. The Institute has supported research efforts during this period to: investigate methods of leaching zinc from sphalerite-containing ores; determine the rate at which a nuclear waste form will dissolve as ground water flows past; predict rock trenchability in terms of trenching rates for available rotary trenchers, and make improvements in the design and operation of mechanical excavators; investigate the effects of variations in moisture content and fine particle concentration on the flow characteristics of coal; study the geochemistry and geology of an Archean gold deposit; investigate the impurities in mined rock salt and their effect on concrete pavements; enhance low-quality aggregates for use in construction; investigate an igneous intrusion with possible copper, nickel, and platinum mineralization; investigate the geology of the Atlantic Pass, Wyoming, gold district; evaluate the use of available software in developing concurrent sand and gravel mine operations and reclamation planning; focus on mechanisms of coal-water mixture combustion in fluidized beds; develop an on-line instrument to detect carbon in the exhaust gas of coal-fired boilers; study the chemistry and origin of manganiferous cherts and their relationship to gold and base metal sulfide deposits; develop a coal handleability index that will predict the ease with which coal will move by gravity flow through their systems; categorize the carbonate rocks in Iowa for use in desulfurization of coal during fluidized bed combustion; and development of crystal/grain alignment during processing of yttrium-barium-copper-perovskite superconductors. 131 refs., 41 figs., 18 tabs.

49738 (IS-IPRT–6) **Iowa State Mining and Mineral Resources Research Institute: Semi-annual report, July 1, 1989–December 31, 1989.** Iowa State Univ. of Science and Technology, Ames, IA (USA). Jan 1990. 37p. Sponsored by U.S. Department of the Interior. DOE Contract W-7405-ENG-82. Grant G1194119. Order Number DE90017514. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This semi-annual report describes the activities of the Iowa State Mining and Mineral Resources Research Institute (ISMMRRI) at Iowa State University, Ames, Iowa, funded by the US Department of Interior, Bureau of Mines, for the period of July 1, 1989 to December 31, 1989. Nine graduate research projects and one undergraduate project are described in the areas of extractive metallurgy, mineral processing, characterization and exploration, and fuel science. Although the graduate students are associated with several different academic departments and are pursuing master's and doctoral degrees in their respective disciplines, they are also all minoring in Mineral Resources. In addition, ISMMRRI hosted the Third International Conference on Processing and Utilization of High-Sulfur Coals, November 14–16, 1989, held in Ames, Iowa. 12 refs., 4 figs., 4 tabs.

49739 (LA–11849-MS) **Isotope geochemistry: A critical component of energy research.** Cole, D.R.; Curtis, D.B.; DePaolo, D.J.; Gerlach, T.M.; Laul, J.C.; Shaw, H.; Smith, B.M.;

Sturchio, N.C. Los Alamos National Lab., NM (USA). Sep 1990. 20p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. Order Number DE90018027. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This document represents the consensus of members of the ad hoc Committee on Isotope Geochemistry in the US Department of Energy; the committee is composed of researchers in isotope geochemistry from seven of the national laboratories. Information included in this document was presented at workshops at Lawrence Berkeley Laboratory (April 1989) and at Los Alamos National Laboratory (August 1989).

49740 (LA-UR-90-2571) **Numerical models of 2-D and 3-D geophysical convection.** Travis, B.J. Los Alamos National Lab., NM (USA). [1990]. 7p. Sponsored by U.S. DOE Management & Administration. DOE Contract W-7405-ENG-36. (CONF-901109-10: International symposium on gas-liquid two-phase flows in conjunction with the winter annual meeting of the American Society of Mechanical Engineers, Dallas, TX (USA), 25-30 Nov 1990). Order Number DE90014979. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

A suite of computational models has been developed which simulate thermal/chemical convection over a wide range of Rayleigh numbers both in 2-D annular and 3-D Cartesian geometries, for small Reynolds number flow, and a variety of boundary conditions. These simulators are revealing the patterns of convection that may occur in the earth, from mantle scale down to more localized regions such as mid-ocean spreading centers, on down to the scale of magma chambers. Features such as surface plates, variable viscosity and chemical buoyancy can have a dramatic impact on convective patterns compared to those seen in simple, constant property, free or fixed surface systems. In most cases, the nonlinear dynamics of these systems derive from thermal and chemical forces, rather than inertial. These models can be used to study general features and dynamics of convecting viscous fluids, and can also be used to constrain possible explanations for geophysical observations such as heat flow, gravity, topography, plate speeds, and isotopic distributions. Computational resources have reached a level at which numerical solutions of complex processes are feasible.

49741 (PNL-5895) **Well network and measurement schedules for monitoring water-level changes beneath the separations area of the Hanford Site.** Last, G.V.; Young, M.A.; Liikala, T.L.; Jensen, E.J. Pacific Northwest Lab., Richland, WA (USA). Aug 1990. 284p. Sponsored by U.S. DOE Office of Administration and Human Resource Management. DOE Contract AC06-76RL01830. Order Number DE90017516. Source: NTIS, PC A13/MF A01 - OSTI; GPO Dep.

In support of the Basalt Waste Isolation Project, Pacific Northwest Laboratory selected a network of wells and measurements schedules for monitoring water-level changes beneath the Separations Area, which encompasses the 200-East and 200-West Areas of the Hanford Site. The purpose of the water-level monitoring network was to allow collection of basic data that could be used to investigate how changes in wastewater discharges in the Separations Area might affect hydraulic heads in the deeper confined aquifers. Pacific Northwest Laboratory monitored water levels in 78 originally selected wells from May 29, 1984, through September 3, 1985. During this monitoring period, some originally selected wells found to unusable, and other wells (or piezometers) were added to the monitoring well network to replace the unusable wells or to increase the amount of data from selected areas. The final monitoring network consisted of 92 wells ad piezometers (completed at various intervals in the unconfined and uppermost confined aquifers) and 5 surface-water gaging stations. Completion uncertainties exist for a number of the wells. Recommendations for resolving these uncertainties include surveying, visual inspection via a downhole camera, geophysical logging, and, in some cases well renovation. 7 refs., 2 figs., 6 tabs.

49742 (SAND-90-1126C) **Recent field trials of directional boring equipment for emplacing a borehole grid around and beneath a simulated waste site.** Wemple, R.P.; Lysne, P.J.; Jacobson, R.D. Sandia National Labs., Albuquerque, NM (USA). [1990]. 8p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-9010166-1: 6. annual Department of Energy model conference on waste management and environmental restoration, Oak Ridge, TN (USA), 29 Oct - 2 nov 1990). Order Number DE90017596. Source: NTIS, PC A02/MF A01 - OSTI.

Chemical/mixed waste sites located in western states are often found in arid regions where the unconsolidated alluvium contains multiple layers of various fines, gravel and cobbles. The transport of contaminants from the near-surface layers to deeper underlying aquifers proceeds either through movement of gas-phase material or through capillary movement of formation fluids driven by periodic episodes of precipitation. Developing in situ methods to characterize the site geology, emplace monitoring equipment, and isolate a problem waste site from the surrounding uncontaminated formation is essential. Since January 1990, the authors have been developing strategies, evaluating commercial equipment, and planning adaptation/extension of existing directional boring technology to cost-effectively enclose a waste site in a grid of vertical and horizontal boreholes. Directional holes have been completed in field trials at SNL (Sandia National Laboratories) and at a manufacturer's sites to demonstrate concept. This paper is presented in outline form with a minimum of text. Reduced-scale information panels are used to communicate the bulk of the project information. 21 figs.

49743 (UCRL-JC-104272) **The dynamics of magma transport and eruption processes: An overview of recent developments.** Carrigan, C.R. (Lawrence Livermore National Lab., CA (USA)); Eichelberger, J.C.; Stockman, H.W. Lawrence Livermore National Lab., CA (USA). May 1990. 28p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-901109-15: International symposium on gas-liquid two-phase flows in conjunction with the winter annual meeting of the American Society of Mechanical Engineers, Dallas, TX (USA), 25-30 Nov 1990). Order Number DE90015123. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The transport of magma in the Earth's crust and its eruption onto the surface can be strongly affected by seemingly subtle details of mass and heat transfer that are often overlooked. In particular, model calculations indicate that the multiphase nature of magma will exert a significant influence. The dynamics of flowing magma may be further enriched by chemical heterogeneity. A variety of studies indicate that a heterogeneous magma can be self-lubricating if viscous segregation of its components occurs. Subtle modifications of dike geometry and boundary conditions can also significantly affect magma transport in thermally unfavorable regimes. Nearer to the surface, changes with time in the permeability of vent boundaries that control leakage of the vapor phase have been linked to the normal progression from explosive, ash producing events to more effusive ones that form lava domes. In this review we attempt to integrate a variety of effects into a coherent view of magma transport and eruption. 16 refs., 8 figs.

49744 (WAU/CGS-CE03140) **Materials: From theory to practice: Proceedings.** Canadian Geotechnical Society, Waterloo, ON (Canada). 1989. 367p. (CONF-891015--: 42. Canadian geotechnical conference, Winnipeg (Canada), 23-25 Oct 1989; CE-03140). Source: Canadian Geotechnical Society, University of Waterloo, Waterloo, ON, CAN . Prices: PRICES UPON REQUEST.

A conference was held to communicate the results of Canadian research of various geotechnical topics. Papers were presented on field investigation techniques, soil and rock characterization, modelling, design of geotechnical structures such as dams, stability analysis, hydrology and environmental phenomena, construction of dams and embankments, containment barriers, and performance measurement of structures such as foundations, piles, bridges, and embankments. Separate abstracts have been prepared for 6 papers from this conference.

The thermodynamic behavior of the inhomogeneous Szekeres type cosmologies with a perfect fluids as source of gravitation is examined. Since the matter motion is geodetic, the absence of heat flow implies that the temperature is a function of time alone. For a subclass approaching homogeneity and isotropy at large cosmological times an expression for the temperature is derived. It does not coincide with the law of temperature satisfied by the FRW universes, even asymptotically. However, by assuming an equation of state explicitly dependent of the space coordinates, it is shown that the FRW thermodynamics may be recovered. In all cases the Euler and Gibbs-Duhem relations are no longer valid. (author).

49747 (CEA-CONF–10033) **Interstellar gas cycling powered by star formation.** Lioure, A.; Chieze, J.P. CEA Centre d'Etudes de Bruyeres-le-Chatel, 91 (France). 1989. 6p. (CONF-8906359–: Colloquium on Physical Processes in Fragmentation and Star Formation, Rome (Italy), 5-11 Jun 1989). Order Number DE91700508. Source: NTIS (US Sales Only), PC A02/MF A01.

Star formation in molecular clouds is a low efficiency process. The mean conversion efficiency of gas into stars is about 1 - 10%, but lower values are often derived. Star formation is followed by a rapid dispersion of the unprocessed material from the active region. As a result, a large mass flux from the cold molecular phase of the interstellar medium towards its more diffuse phases is produced. When stationary state is assumed, this imprints a cycle of the interstellar matter, powered by star formation and feeded by the disruption of molecular clouds. We suggest that the flow is dominated by condensation processes which in sequence bring the gas to the highest densities found in protostellar clumps: cooling processes and related instabilities drive heated gas to HI state followed by mechanical processes as collisions of HI clouds or gravitation inside individual molecular clouds. Simplifying assumptions upon the condensation rates of each process allow for the calculation of the mass distribution over these various phases. The model presented here is a dynamical version of the standard two phase model, and predicts a nonequilibrium - though stationary - continuous distribution of luke-warm gas.

49748 (DOE/ET/53088–450) **Numerical study of compressible magnetoconvection with an open transitional boundary.** Hanami, H.; Tajima, T. Texas Univ., Austin, TX (USA). Inst. for Fusion Studies. Aug 1990. 43p. Sponsored by U.S. DOE Energy Research; Japan Society for the Promotion of Science; Nukazawa Memorial Foundation; National Science Foundation. DOE Contract FG05-80ET53088. (IFSR–450). Order Number DE91000148. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

We study by computer simulation nonlinear evolution of magnetoconvection in a system with a dynamical open boundary between the convection region and corona of the sun. We study a model in which the fluid is subject to the vertical gravitation, magnetohydrodynamics (MHD), and high stratification, through an MHD code with the MacCormack-Donner cell hybrid scheme in order to well represent convective phenomena. Initially the vertical fluid flux penetrates from the convectively unstable zone at the bottom into the upper diffuse atmosphere. As the instability develops, the magnetic fields are twisted by the convection motion and the folding magnetic fields is observed. When the magnetic pressure is comparable to the thermal pressure in the upper layer of convective zone, strong flux expulsion from the convective cell interior toward the cell boundary appears. Under appropriate conditions our simulation exhibits no shock formation incurred by the fluid convected to the photosphere, in contrast to earlier works with box boundaries. The magnetic field patterns observed are those of concentrated magnetic flux tubes, accumulation of dynamo flux near the bottom boundary, pinched flux near the downdraft region, and the surface movement of magnetic flux toward the downdraft region. Many of these computationally observed features are reminiscent of solar observations of the fluid and magnetic structures of their motions.

Aug 1990. 41p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract FG05-80ET53088. (IFSR–452). Order Number DE90017617. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

It is shown that a plasma with temperature T sustains fluctuations of electromagnetic fields and particle density even if it is assumed to be in a thermal equilibrium. The level of fluctuations in the plasma for a given wavelength and frequency of electromagnetic fields is rigorously computed by the fluctuation-dissipation theorem. A large zero frequency peak of electromagnetic fluctuations is discovered. We show that the energy contained in this peak is complementary to the energy "lost" by the plasma cutoff effect. The level of the zero frequency magnetic fields is computed as $(B^2)^0/8\pi = 1/2\pi^3\ T(\omega_p/c)^3$, where T and ω_p are the temperature and plasma frequency. This is the theoretical minimum magnetic field strength, as no turbulence is assumed. The size of the fluctuations is $\lambda \sim (c/\omega_p)(\eta/\omega)^{1/2}$, where η and ω are the collision frequency and the frequency of magnetic fields oscillations. These results are not in contradiction with the conventional black-body radiation spectra but its extension, and as such, do not contradict the observed lack of structure in the cosmic microwave background. The level of these is computed $B_{lambda} = 9.4 \times 10^{-7}\ (a/a_0)^{-1/2}\ (\lambda/1\ cm)^{-3/2}$ Gauss, where a and a_0 are the scale factors at time t and at present and λ the wavelength of magnetic fluctuations. Our computer particle simulation shows the support of the theory and in fact exhibits a peaking of the magnetic energy spectrum at zero frequency. The level of magnetic fields is significant at the early radiation epoch of the Universe. Implications of these magnetic fields in the early Universe are discussed.

49750 (ESA-SP–290) **Infrared spectroscopy in astronomy: Proceedings of the 22 Eslab Symposium.** Glasse, A.C.H.; Kessler, M.F.; Gonzalez Riestra, R. European Space Agency, 75 - Paris (France). Sep 1989. 613p. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

In this meeting the following subjects were reviewed: solar system, interstellar medium, star formation, galactic structure, extragalactic astronomy, studied by infrared spectroscopy.

49751 (ESA-SP–290, pp. 3-14) **IR spectroscopy of planets and satellites; Venus, Mars, giant planets and titan.** Encrenaz, T. (Observatoire de Paris, 75 (FR)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Infrared spectroscopy is an essential tool for studying planetary atmospheres and surfaces, both in the reflected sunlight component and in the thermal emission spectrum.

49752 (ESA-SP–290, pp. 15-36) **Infrared cometary spectroscopy.** Crovisier, J. (Observatoire de Paris, Section de Meudon, 92 (FR)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Infrared spectroscopy, with microwave and submillimetre spectroscopy, is practically the only remote-sensing technique able to

study stable molecules sublimed from the nucleus or formed by gas-phase chemistry in the inner coma. We review here recent observations and theoretical works concerning cometary molecules, relevant to infrared spectroscopy.

49753 (ESA-SP–290, pp. 37-40) **Analogies between cometary, interplanetary and interstellar matter.** Puget, J.L. (Ecole Normale Superieure, 75 - Paris (FR)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

The search for analogies between interstellar matter and dust in the solar system (both interplanetary and cometary) is shown to the be fruitful not only because some interstellar particles survived the formation of the solar system and are locked in interplanetary dust but because the physical processes to which cometary and interplanetary dust are subjected are very similar to those at work in interstellar clouds.

49754 (ESA-SP–290, pp. 49-54) **The unidentified IR bands in laboratory, in interstellar medium and in comets.** Colangeli, L. (European Space Research and Technology Centre, Noordwijk (NL)); Schwehm, G.; Bussoletti, E.; Fonti, S.; Blanco, A.; Orofino, V. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

A comparative analysis of IR spectral properties measured in laboratory for various carbonaceous materials shows that hydrogenated amorphous carbon grains, polycyclic aromatic hydrocarbon mixtures and coal tar present features which match in wavelength position some of the unidentified infrared (UIR) bands. The experimental results are applied to fit both astronomical and cometary observations. Some suggestions are derived about physico-chemical properties of the UIR band carriers in space and the relationship between interstellar and cometary materials.

49755 (ESA-SP–290, pp. 55-60) **Observations of CO on Mars in the infrared and millimetre range.** Encrenaz, Th. (Observatoire de Paris, 75 (FR)); Billebaud, F.; Lellouch, E.; Combes, F.; Gerin, M.; Maillard, J.P.; Paubert, G. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Millimeter observation of Mars in the (10) lines of CO and ^{13}CO has shown evidence for a significant enhancement of the ^{13}CO line with respect to the CO line. Following this result, high resolution observations of the CO (1-0) vibrational band at 4.7μm have been performed in 1988. Several martian lines of $^{12}C^{16}O$, ^{13}CO, $C^{17}O$ and $C^{18}O$ have been identified and analyzed. From the CO lines, a ratio $CO/CO_2 = 0.0015$ is derived. The other isotopic ratios of carbon and oxygen; this result apparently confirms the effect observed in the millimeter range. New observations of CO and ^{13}CO have been recorded in the (1-0) and (2-1) lines at several positions of the martian disk.

49756 (ESA-SP–290, pp. 61-66) **Near infrared spectroscopy of Mars: study of the surface mineralogy.** Encrenaz, T. (Observatoire de Paris, 75 (FR)); Bouchet, P. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Spectra of Mars have been recorded in September and October 1988, at the 1m telescope of ESO (La Silla, Chile), between 2.8 and 5.2 μ m, with a circular variable filter and a resolving power of 60. Spectra were recorded at the center of the disk, the north region and the south pole with an aperture of 5 arcsec. In all the spectra, there is a strong absorption around 3 μ m due to the OH bond in hydrated silicates, already observed previously. Weak absorption features seem to be superimposed at 3.4 and 3.8 μ m in some spectra and are probably representative of the surface mineralogy. Other absorption features are visible, especially in the cold regions, between 4.8 and 5.2 μ m: apart from the strong 4.25 μ m band, gaseous carbon dioxide is observed at 4.85 and 5.15 μ m; moreover, an absorption feature appears around 5.0 μ m in some spectra of the northern region. If this feature is confirmed, it might be interpreted as carbon monoxide chemically bound on the martian surface (possibly in form of metallic carbonyls such as Fe(CO)n).

49757 (ESA-SP–290, pp. 67-72) **A unified model for the 3.28 μ m and 3.4 μ m spectral feature in the interstellar medium and in comets.** Hoyle, F. (University Coll., Cardiff (UK). Dept. of Applied Mathematics and Astronomy); Wickramasinghe, N.C. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

The 3.4 μ m absorption feature seen in the spectra of GC-IRS7 and also in other sources in the galactic centre area is shown to be of interstellar rather than circumstellar origin. The implication is that a large fraction of interstellar grains are organic in character. The 3.28 μ m feature seen in emission in planetary nebulae, in external galaxies, and in the diffuse infrared radiation from the Galaxy is most likely due to aromatic hydrocarbons which are released as degradation products of organic grains. The same aromatic molecules can also explain the 2200A interstellar extinction feature. The detailed 2.8-3.6 μ m profiles of IRS7 obtained from both AAT spectra and Japanese sources can be explained on the basis of grains comprised of material closely resembling biogenic matter in their disposition of CH linkages. Dust particles possessing the same detailed spectral characteristics as the interstellar grains are able to match infrared spectra obtained for Halley's Comet.

49758 (ESA-SP–290, pp. 73-78) **Interpretation of the 10 μ m and 20 μ m absorption bands in comets, the ism and in an external galaxy.** Wickramasinghe, N.C. (University Coll., Cardiff (UK). Dept. of Applied Mathematics and Astronomy); Hoyle, F.; Majeed, Q.; Al-Mufti, S.; Wallis, M.K. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

The data for the Trapezium nebula in the wavelength range 8-30 μ m are compared with fluxes computed for models involving Murchison meteorite material, crystalline silicates, organic material and biomaterial. Generally similar mixtures of these components are shown to be indicated from astronomical data as widely ranging as comet Halley and the extragalactic source M82.

49759 (ESA-SP–290, pp. 79-92) **Infrared spectroscopy of dust.** Roche, P.F. (Royal Observatory, Edinburgh (UK)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Infrared spectroscopy has allowed the identification of a number of different components of interstellar dust. Refractory species such as silicates and silicon carbide are commonly seen in circumstellar dust, whilst the former also dominate the infrared absorption by interstellar dust. In addition, spectral features from a number of more volatile species condensed on grains have been measured in cold, sheltered regions such as molecular clouds and dense circumstellar outflows from cool evolved stars. In diffuse regions, and particularly in ionization fronts and photodissociation regions close to hot stars, the infrared emission spectrum is dominated by a family of narrow emission features between 3 and 13 μ m produced by small carbon-rich grains. Recent observations have shown that there are a number of weak bands in addition to the well-known strong features.

49760 (ESA-SP–290, pp. 93-98) **Interstellar extinction in the infrared.** Draine, B.T. (Princeton Univ., NJ (US). Observatory). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Extinction by insterstellar dust at infrared wavelengths is reviewed. For $0.7 < \lambda < 7$ μ m the observed extinction, both in the Galaxy and in the Magellanic Clouds, appears to be consistent with a simple power law, A_λ proportional to $\lambda^{-1.75}$, although the observational uncertainties remain appreciable. In the 8-30 μ m region interstellar extinction is dominated by the 9.7 μ m and 18 μ m silicate features; the absolute strength (relative to the continuum extinction at shorter wavelengths), the detailed wavelength-dependence of these features, and the possible variation of the profile shape from diffuse clouds to dense clouds, all remain somewhat controversial. In the farinfrared $\lambda > \approx 30$ μ m grain emissivity estimates by different authors vary considerably; future observations of thermal emission from diffuse clouds in the 300 μ m region offer the prospect of substantially reducing uncertainties in far-infrared emissivities.

49761 (ESA-SP–290, pp. 99-108) **Spectropolarimetry as a diagnostic of the interstellar medium.** Aitken, D.K. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

An introductory treatment is given of the application of infrared spectropolarimetry to the study of the properties of dust grains and their environment. The analysis of the extinction and polarization expected from an arbitrary grain model is outlined, together with sufficient source citation to ennable application in a practical situation. Examples of some of the more recent observational work are presented in terms of their implications for dust grain physics and chemistry and the ambient magnetic field.

49762 (ESA-SP–290, pp. 109-114) **Chemistry on interstellar grains and implications for infrared spectroscopy.** Millar, T.J. (Manchester Univ. (UK). Dept. of Mathematics). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

In this article I review the infrared and millimetre-wave observations which suggest that the gas-grain interaction is important in dense clouds. This interaction results in the formation of H_2O ice in clouds having relatively low extinction. I argue that observations of the gas in hot molecular cores enables one to study grain surface processes since it appears very likely that this hot gas is rich in material evaporated from grains. The detection of large saturated molecules, such as dimethyl ether and ethanol, in such regions indicates that the surface chemistry may be very complex. Finally I discuss briefly how the unidentified infrared emission bands may be affected by chemical processes.

49763 (ESA-SP–290, pp. 115-132) **Photodissociation regions: observations and theory.** Genzel, R. (Max-Planck Institut fuer extraterrestrische Physik, Garching, (DE)); Harris, A.I.; Stutzki, J. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Photodissociation regions are copious emitters of infrared, millimeter and submillimeter line radiation. Detailed multiwavelength studies of such regions are now possible and reveal valuable information on the physical parameters of interstellar gas clouds and on the character of the UV radiation exciting them.

49764 (ESA-SP–290, pp. 161-168) **Infrared diagnostics for interstellar solid state chemistry.** Grim, R. (Rijksuniversiteit Leiden (NL)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Recent laboratory research has opened the way to interpret interstellar absorption spectra from a different point of view. An overview of the interstellar IR absorption features is given with appropiate references for further reading. Recent laboratory results are noted point by point. Future ISO data reduction may benefit greatly from such studies.

49765 (ESA-SP–290, pp. 177-188) **Polycyclic aromatic hydrocarbons in the infrared spectra of IRAS sources.** Jourdain de Muizon, M. (Rijksuniversiteit Leiden (NL)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We present infrared spectra of IRAS sources, mainly HII regions and reflection nebulae. The observations include the IRAS Low Resolution Spectra (LRS) and ground-based 3μm spectra. All sources in our sample have strong emission features at 7.7, 8.6 and 11.3μm in their LRS spectra; in all of them, we have detected the strong 3.3μm emission band, often together with a feature at 3.4μm and an emission plateau at 3.4-3.6μm. The data are analysed in the context of the Polycyclic Aromatic Hydrocarbons (PAH) hypothesis. In particular, the size of molecules and their degree of hydrogenation are investigated. For a few sources, 3μm spectra at higher resolution reveal the presence of additional emission features in the 3.4-3.6μm region. Possible interpretations for these bands are discussed. Finally, new laboratory spectra are presented which show a general fit to the observed spectra. Observational test are suggested.

49766 (ESA-SP–290, pp. 189-192) **An almost total disjunction between emission and absorption dust features - what does it tell us.** Leger, A. (Paris-7 Univ., 75 (FR)); d'Hendecourt, L.B.; Verstraete, L.; Ehrenfreund, P. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

An important observational fact about dust features is the comparison between the absorption features and those seen in emission. The striking fact is the almost complete absence of overlap between these two sets of features. An interesting case is the comparison between the 3.4μm band attributed to aliphatic C-H bonds seen in absorption and the 3.3μm one assigned to aromatic C-H bonds seen only in emission. An interpretation is proposed.

49767 (ESA-SP–290, pp. 197-202) **Wide-beam balloon observations of the 157.7μm [CII]-line.** Nordh, H.L. (Stockholm Observatory, (SE)); Olofsson, S.G.; Bohlin, M.; Frisk, U.O.; Fridlund, C.V.M. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

The scientific rationale behind the use of a small-sized (30 cm) balloon telescope for wide-beam (11 arc minutes) spectroscopic observations in the far infrared particularly of the [CII] line at 157.7μm, is discussed. The technical details of the experiment are briefly summarized. Measurements of W3 performed during a flight in 1987 are reported and are shown to agree well with published results obtained using the Lear Jet. The prospects of future observations are discussed from both the scientific and technical points of view.

49768 (ESA-SP–290, pp. 293-298) **The environment of young stellar objects studied by high-resolution infrared spectroscopy.** Maillard, J.P. (Centre National de la Recherche Scientifique, 75 - Paris (FR). Inst. d'Astrophysique); Mitchell, G.F.

European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We have observed several luminous embedded young stellar objects at high resolution (8 km s^{-1}) in the 4.7 μm region using the FTS of the CFH Telescope. The spectra cover most of the M band, showing the lines of the v=1-0 band of ^{12}CO and often of ^{13}CO with blueshifted components. We report observations of GL 2591, M8-IR, GL 490, W3 IRS5, sources of strong molecular bipolar outflows, and W33A. This technique has proved a very powerful probe of hot gas flows not detected at millimeter wavelengths, and then located near the central object. In most of the sources the lines are resolved in several distinct velocity components. In W33A, in which the 2140 cm^{-1} feature of solid CO is detectable, the ratio of solid to gas phase is measured.

49769 (ESA-SP–290, pp. 299-304) **Molecular hydrogen in the HII region G333.6-0.2.** Moneti, A. (European Southern Observatory, Garching (DE)); Moorwood, A.F.M. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We have obtained IR spectral observations and a direct IR image of the galactic HII region G 333.6-0.2 in order to study the relative distribution of the shocked and the ionized gas components.

49770 (ESA-SP–290, pp. 203-206) **Near infrared spectroscopy of the supernova remnant RCW103.** Oliva, E. (Osservatorio Astrofisico di Arcetri, Florence (IT)); Moorwood, A.F.M.; Danziger, I.J. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Following our previous systematic study of the [Fe II], H_2 and hydrogen lines emission in supernova remnants we present detailed spectroscopic observations of RCW103, the most powerful source of IR lines emission among the galactic remnants studied so far.

49771 (ESA-SP–290, pp. 207-212) **A coal model for the carriers of the unidentified IR bands.** Papoular, R. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (FR). Inst. de Recherche Fondamentale (IRF)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

The absorbance spectrum of vitrinite is shown to come closer to the generic spectrum of the unidentified IR bands (UIB's) than any previously proposed model. Vitrinite is the organic and major component of coal, its composition, structure and behaviour as a function of age, origin, heat, treatment, etc. are now fairly well known. A very large amount of IR data on vitrinite (as well as on the other components of coal) is also available and still accumulating. It appears from all these data that all coals have a limited number of mid-IR features; the factors mentioned above only alter the relative intensities of these features, leaving their positions and widths practically unchanged and identical to those of the UIB's. Each of the UIB's has its counterpart in the vitrinite spectra, which also exhibit a continuum rising toward the blue. The better fit provided by vitrinite over other models is due to the presence of oxygen, as well as hydrogen, in the form of surface functional groups bonded to a bulk, disordered, carbon structure with aliphatic as well as aromatic bonds.

49772 (ESA-SP–290, pp. 213-220) **Spectroscopy and physico-chemistry of CO:H_2O and CO_2:H_2O ices.** Schmitt, B. (Centre National de la Recherche Scientifique, 38 - Grenoble (FR). Lab. de Glaciologie); Grim, R.; Greenberg, M. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Recent laboratory measurements on both the spectral and physical properties of CO:H_2O and CO_2:H_2O ice mixtures have been performed. The effects of the composition, the temperature and the thermal history on the H_2O (3.1 and 6.0 μm), CO (4.67 μm) and CO_2 (4.27 μm) infrared bands are discussed. It is shown that additional informations on the composition and on the history of grain mantles can be obtained from a detailled analysis of these absorption bands.

49773 (ESA-SP–290, pp. 221-224) **Mapping and spectroscopy of the 3.3 μm feature in Orion.** Sellgren, K. (Hawaii Univ., Honolulu, HI (US). Inst. for Astronomy); Tokunaga, A.T.; Nakada, Y. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We present the results of spectroscopy of the 3.3 μm feature, H_2 emission, and Brα, obtained in a spatial cut across the Orion ionization front. The spatial distribution of the 3.3 μm feature peaks between the ionization front and the H_2 peak. The shape of the 3.3 μm feature observed at high spectral resolution shows no changes in regions of varying UV flux and density. Our results are discussed in terms of current models for the 3.3 μm emission feature.

49774 (ESA-SP–290, pp. 225-232) **An implication of the IR identification of PAHs: the heating of the diffuse is gas.** Verstraete, L. (Paris-7 Univ., 75 (FR)); Leger, A.; d'Hendecourt, L.B.; Defourneau, D.; Dutuit, O. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

The HI diffuse medium as seen by 21-cm emission absorption observations shows essentially 2 phases in pressure equilibrium: the cold medium with T $\approx$ 40 to 400 K and n_H = 50 cm^{-3} and the warm medium with T = 6000 to 8000 K n_H = 5 10^{-1} cm^{-3}. The cooling mechanisms for the HI medium are now well understood but the heating required remains unaccounted for. We have estimated the heating due to photoionization of PAHs: it is found that PAHs dominate the heating of the cold phase and that it would represent an important fraction of that required for the warm phase.

49775 (ESA-SP–290, pp. 269-280) **The excitation of molecular hydrogen and its significance.** Sternberg, A. (Max-Planck-Institut fuer Physik und Astrophysik, Garching (DE). Inst. fuer Extraterrestrische Physik). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

The excitation of molecular hydrogen gas in interstellar environments is reviewed. Emphasis is given to the H_2 emission produced in photodissociation regions. Diagnostics of shock vs. photodissociation region H_2 emission are listed.

49776 (ESA-SP–290, pp. 305-306) **Infrared spectroscopy of late-type stars.** Jong, T. de (Amsterdam Univ. (NL)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Published in summary form only. GIANT STARS/infrared radiation; EMISSION SPECTRA

49777 (ESA-SP–290, pp. 307-316) **Planetary nebulae.** Barlow, M.J. (University Coll., London (UK). Dept. of Physics and

Astronomy). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

A large number of infrared fine structure lines have now been observed from planetary nebulae and they provide a powerful tool for the determination of nebular physical parameters and abundances, for both ionised and neutral regions. Recent work on the modelling of the dust emission continua and on the derivation of gas-to-dust mass ratios is also reviewed.

49778 (ESA-SP–290, pp. 317-328) **Infrared spectroscopy of novae and related objects.** Bode, M. (Preston Polytechnic (UK). Div. of Physics and Astronomy). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Infrared spectroscopy of classical, dwarf and recurrent novae, together with symbiotic stars, is reviewed. Particular attention is paid to classical novae where infrared spectroscopy is invaluable in probing the early chemistry, formation of dust shells, and the origin of coronal line emission seen in many of these objects.

49779 (ESA-SP–290, pp. 329-338) **Infrared spectroscopy of supernova 1987A.** Meikle, W.P.S. (Imperial Coll. of Science and Technology, London (UK). Blackett Lab.). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

The infrared spectroscopic study of SN 1987A is providing a uniquely detailed view of the interior of a supernova explosion. At early times the IR spectrum of SN 1987A was dominated by continuum emission, with P-Cygni profiles, mostly hydrogen, superimposed. By day 200, the IR spectrum was dominated by emission lines. As the supernova aged, forbidden lines became increasingly prominent. About 20 species, including molecules, have been identified. Approximate estimates of the mass of iron and cobalt in the ejecta have been obtained. There is general agreement that the substantial masses found are consistent with their originating from the decay of 0.078 solar mass of ^{56} Ni created in the explosion. Comparison of IR spectral models with the data should allow constraints to be placed upon possible explosion scenarios.

49780 (ESA-SP–290, pp. 339-342) **High resolution infrared spectroscopy of symbiotic stars.** Bensammar, S. (Observatoire de Paris, Section de Meudon, 92 (FR)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We report here very early results of high resolution ($5x10^3$ - $4x10^4$) infrared spectroscopy (1 - 2.5 μm) of different symbiotic stars (T CrB, RW Hya, CI Cyg, PU Vul) observed with the Fourier Transform Spectrometer of the 3.60m Canada France Hawaii Telescope. These stars are usually considered as interacting binaries and only little details are known about the nature of their cool component. CO absorption lines are detected for the four stars. Very different profiles of hydrogen Brackett γ and helium 10830 A lines are shown for CI Cyg observed at different phases, while Pu Vul shows very intense emission lines.

49781 (ESA-SP–290, pp. 343-350) **Herbig Ae/Be stars: fine structure far-infrared lines.** Ceccarelli, C. (Consiglio Nazionale delle Ricerche, Frascati (IT). Ist. di Fisica dello Spazio Interplanetario); Lorenzetti, D.; Saraceno, P.; Spinoglio, L.; Ingrosso, G.; Strafella, F. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We present here the preliminary results on the most important far-infrared fine-structure lines in the partially ionized regions around Herbig Ae/Be stars. Although a very simple chemistry is assumed, our model, balancing the main contributions to heating and cooling on a grid of spherical zones, allows an estimate of the line fluxes. The results are compared with the sensitivity of the Long Wavelength Spectrometer (LWS) on board of the future ESA satellite ISO.

49782 (ESA-SP–290, pp. 351-354) **Ice grains in the dust disk of the bipolar nebula M 1-92.** Eiroa, C. (Observatorio Astronomico Nacional, Madrid (ES)); Hodapp, K.W. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We present 2.4 - 3.8 um spectra of the bipolar nebula M 1-92, taking with the cooled grating array spectrometer at the NASA Infrared Telescope Facility (Mauna Kea). Data were obtained at five positions of the object: one coinciding with the illuminating star, and the rest distributed along the dust torus the bipolar nebula. No spectral signature is observed at the position of the star. On the other hand, a narrow 3.1 um absorption is observed in all four positions of the torus. The feature is interpreted as being due to a mixture of pure amorphous and crystalline water ices. We suggest that M 1-92, OH 231.8 + 4.2 and IRAS 09371 + 1212 form a distinct group among the evolved bipolar nebulae, characterized by the presence of pure water ices in their associated dust tori.

49783 (ESA-SP–290, pp. 355-358) **CO infrared bands in atmospheres of long-period variables.** Heske, A. (Rijksuniversiteit Leiden (NL)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

This paper presents an ongoing study of the CO infrared bands in atmospheres of long-period-variables. The intensities of the different bands do not follow the Boltzmann-distribution for a single temperature, in particular no fundamental band has been detected. The width of the 2nd overtone was found to significantly broader than that for the 1st overtone. It will be concluded that the different bands are characteristic features for different temperature layers in the atmospheres and circumstellar envelopes of variables.

49784 (ESA-SP–290, pp. 359-362) **A survey of PAH emission in HII regions, planetary and proto-planetary nebulae.** Jourdain de Muizon, M. (Rijksuniversiteit Leiden (NL)); Cox, P.; Lequeux, J. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We report on preliminary results of a systematic investigation of PAH emission in H II regions, planetary nebulae (PN) and proto-planetary nebulae (PPN). This emission occurs in a vast majority of H II regions showing the ubiquity of the carriers. With the possible exception of NGC 6302, PAH emission is only seen in carbon-rich PNs and PPNs and is quite common in this case. This shows that PAHs are formed, at least partly, in carbon-rich evolved objects. This paper is an updated version of a paper presented at the IAU Symposium No. 135 (Interstellar Dust) in July 1988.

49785 (ESA-SP–290, pp. 367-370) **IR spectrophotometry of bright carbon stars.** Lazaro, C. (Instituto de Astrofisica de Canarias, Tenerife (ES)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Medium resolution spectrophotometry of 15 bright Carbon stars of class N has been obtained in the range λ: 1-4.2 μm, complemented by wide band photometry in JHKLM for a bigger sample. The selected sample of stars does not show evidence of massive circumstellar dust envelopes and the infrared flux is expected to arise mainly from a, hopefully, only little disturbed photosphere. The observed flux distributions have been compared with those predicted by model atmospheres, both with and without polyatomic molecules, in order to derive the effective temperatures of the stars. Important differences arise between the observed spectra and the predictions of models, constraining their validity and giving some insight into the possible origins of the disagreement.

49786 (ESA-SP–290, pp. 371-374) **Dust in planetary nebulae: IRSPEC observations in the 3.0 μm - 3.8 μm range.** Magazzu, A. (Osservatorio Astrofisico, Catania (IT)); Strazzulla, G. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We present IRSPEC observations ($\lambda/\Delta\lambda \approx 1100$) of planetary nebulae in the 3.0-3.8 μm range. The detection of some of the so-called unidentified infrared features is discussed in the light of the current theories concerning dust grain properties.

49787 (ESA-SP–290, pp. 375-378) **Near infrared (1 - 4 μm) spectroscopy of SN1987 A.** Oliva, E. (Osservatorio Astrofisico di Arcetri, Florence (IT)); Moorwood, A.F.M.; Danziger, I.J. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We present spectral observations of SN1987 A between 1.05 μm and 4.2 μm at resolving power $R \approx 1500$ collected at the ESO 3.6m telescope using the ESO grating array spectrometer IRSPEC during October 87, April 88 and October 88.

49788 (ESA-SP–290, pp. 379-380) **Observations of 40-70 μm bands of ice in IRAS 09371+1212 and other stars.** Omont, A. (Grenoble-1 Univ., 38 (FR)); Forveille, T.; Moseley, S.H.; Glaccum, W.; Harvey, P.M.; Likkel, L. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

IRAS09371+1212 is up to now an absolutely unique object. This M giant star, with circumstellar CO, has unique IRAS colors, attributed to strong emission in the 40-70 μm bands of ice. This suggestion has been strengthened by subsequent observations of a strong 3.1 μm absorption band. Our recent KAO observations now confirm its unusual nature: the far infrared bands of ice are by far the strongest known in the sky. Its dust temperature, < 50K, is by far the lowest known for a circumstellar envelope. Ice is clearly crystalline, and there are indications that the emissivity index of the silicates is ≈ 2. The 43 μm band is also detected in several very cold OH/IR circumstellar envelopes.

49789 (ESA-SP–290, pp. 381-384) **Carbon monoxide in supernova 1987A.** Spyromilio, J. (Imperial Coll. of Science and Technology, London (UK). Blackett Lab.); Meikle, W.P.S.; Learner, R.C.M.; Allen, D.A. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

The identification of carbon monoxide (CO) in the infrared spectra of SN 1987A and of CO^+ represents the first ever detection of a molecule in a supernova. In IR spectra obtained with the Anglo-Australian Telescope (AAT), first overtone emission from CO was observed near 2.3 μm as early as day 112 after the explosion, and was clearly detectable in all subsequent spectra. Spectra of the CO fundamental at 4.6 μm support this identification. We argue that the CO forms part of the supernova ejecta, and present a preliminary analysis of the first overtone band using Boltzmann population statistics. The model reproduces well the spectra obtained on days 192 and 255 and implies the presence of about $5X10^{-5}$ solar mass of CO by day 255. By day 284 the fit is less good, due to increasingly prominent emission from other species, possibly in combination with the breakdown of the Boltzmann distribution.

49790 (ESA-SP–290, pp. 385-386) **Predictions of infrared recombination lines in stellar winds of hot stars.** Strous, L.H.; Lamers, H.J.G.L.M. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Infrared recombination lines can provide accurate estimates for the velocity and density structure of stellar winds and thus of mass loss. We use a simple stellar wind model, hydrogenic approximations and scaling laws to derive information about recombination lines in the ISO range (1-100μm). We estimate that, for a 40000K star, the boundary-level from above which recombination lines originate is in the range n=2-10 for the most abundant elements. We give a simple formula to estimate the population of levels above the boundary-level and use this to produce a table of predictions of fluxes and equivalent widths of recombination lines for H, He, C, N and O.

49791 (ESA-SP–290, pp. 387-392) **Detection of SN1986j in NGC891 at millimetre wavelengths.** Tuffs, R.J. (Max-Planck-Institut fuer Kernphysik, Heidelberg (DE)); Chini, R.; Kreysa, E. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Supernova 1986j in NGC 891 has been detected at λ 1.2 mm and λ 3 mm at epoch 1986.8 using the IRAM 30-m millimetre radio telescope (MRT). It is the first supernova to be detected at near-millimetre wavelengths. The spectrum between λ3 and λ1.2 mm is flat, or rising towards shorter wavelengths, lying well above the extrapolation of the optically thin synchrotron radio spectrum of SN1986j at centimetre wavelengths at a similar epoch. The MRT observations are interpreted as arising from a pulsar-powered synchrotron nebula at the centre of the expanding layers of supernova ejecta which is physically distinct from the circumstellar interaction region from which the centimetre wavelength radio emission is produced. The observations suggest that millimetre wavelength and far-infrared spectrophotometry will be a useful tool to investigate pulsars and the pulsar environment in recent supernovae.

49792 (ESA-SP–290, pp. 393-402) **JCMT observations of the circumstellar envelope IRC + 10216.** Williams, P.G. (Queen Mary Coll., London (UK). Dept. of Physics); White, G.J.; Sanderson, C.A. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Observations of the circumstellar envelope IRC + 10216 made with the James Clerk Maxwell Telescope are presented. Maps with the 14 min FWHM beam have been made in the CO J=3-2, CS J=7-6 and HCN J=4-3 transitions. The radial CO distribution agrees in shape with the Kwan/Linke outflow model, but is lower in intensity by an overall factor of 0.54. The HCN intensity is nearly double that of CO, but drops off almost twice as rapidly with distance from the source centre. Single spectra at the source centre are also presented for the isotopes ^{13}CO, $H^{13}CN$, $C^{34}S$ and for the lower excitation J=3-2 line of HCN and its isotope $H^{13}CN$ (with 23 min FWHM beam).

49793 (ESA-SP–290, pp. 419-420) **Velocity-resolved spectra of BRα and BRγ on IRS16 SW and NE.** Maillard, J.P. (Centre National de la Recherche Scientifique, 75 - Paris (FR). Inst. d'Astrophysique); Gay, J. European Space Agency, 75 - Paris

(France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Published in summary form only. MILKY WAY/galaxy nuclei; HYDROGEN; SPECTRA; BALMER LINES

49794 (ESA-SP–290, pp. 431-438) **Near infrared spectroscopy of active galaxies.** Moorwood, A.F.M. (European Southern Observatory, Garching (DE)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Recent progress in applying near infrared spectroscopy to the study of active galactic nuclei is reviewed. This wavelength region contains important lines such as the Paschen and Brackett hydrogen recombination lines, HeI(1.083μm) and OI(1.1287μm) which complement lines in the visible spectrum for studies of the reddening and physical conditions. With current array spectrometers it is now possible to observe Hα at high s/n in QSOs at z$\approx$2 and to measure linewidths and profiles with sufficient resolution to investigate for e.g the question of visually obscured BLRs in Seyfert 2 galaxies. Strong [FeII] and H_2 line and 3.28 μm feature emission observed in galaxies with Seyfert nuclei imply vigorous star forming activity and/or an interaction between the active nucleus and circumnuclear gas.

49795 (ESA-SP–290, pp. 439-446) **Near-infrared spectroscopy of starburst and interacting galaxies.** Joseph, R.D. (Imperial Coll. of Science and Technology, London (UK). Blackett Lab.). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Near-infrared spectroscopy has developed as a new branch of extragalactic astronomy over the past 4-5 years. Features due to atomic and molecular hydrogen, FeII, CO, and the unidentified 3.28μm dust feature are generally strong and detectable in galaxies using modern instrumentation. An overview of the results of the largely exploratory observations undertaken to date is presented. The major focus is to illustrate the potential of near-infrared spectroscopy to illuminate the physics and astrophysics of starbursts in galaxies. Some of the uncertainties, as well as the more firm conclusions are highlighted. Finally, it is suggested that the initial exploratory phase of extragalactic near-infrared spectroscopy is over, and the subject is sufficiently developed to take its place as part of the armamentarium of modern extragalactic astronomy.

49796 (ESA-SP–290, pp. 447-454) **Spectroscopy of galaxies in the mid-infrared.** Roche, P.F. (Royal Observatory, Edinburgh (UK)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

The mid-infrared spectral properties of galaxies are described. Most of the galaxies that are bright in the mid-infrared are dominated by emission from dust, although non-thermal emission may be important in the most luminous active nuclei. There are clear differences between the spectra of galaxies with powerful HII regions in their nuclei and those containing AGN. In particular, the family of unidentified emission bands between 3 and 13 μm dominates the spectra in the former objects, but are rarely evident in spectra of AGN. In many AGN, evidence of silicate dust is provided by the presence of the 9.7 μm silicate absorption band; the strong spectral structure in HII region galaxies renders measurement of the silicate band in those objects difficult. Overall, dust properties in galaxies and in the Milky Way are broadly similar, but there are significant differences in the mix of grain components between dust around AGN and other galaxy nuclei. Fine-structure ionic lines, particularly of [NeII], are frequently detected in HII region galaxy nuclei; they have not yet been detected in active nuclei. The relative strengths of the emission lines can yield useful constraints on the excitation of the ionized gas, and the effective temperature of the exciting stars.

49797 (ESA-SP–290, pp. 473-476) **Infrared spectroscopy of star formation in galaxies: extreme conditions and very short time scales.** Beck, S.C. (Tel Aviv Univ. (IL). Dept of Astronomy); Ho, P.T.P.; Turner, J.L. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We have measured Brackett α and γ with a 7.2 min beam and 350 km/sec spectral resolution in 11 infrared-bright galaxies and used the fluxes as diagnostics of the population of young OB stars. The star-formation activity in the program galaxies is surprisingly concentrated in both space and time. The OB stars present in 7.2 min are sufficient to generate the bulk of the infrared emission observed in the much larger area measured by IRAS, and the OB stars in several galaxies are no older than a few million years. In some galaxies the ratios of Brackett to radio continuum flux are unusual and could indicate the presence of ultra compact H_{II} regions, very low electron temperatures, or widespread departures from Case B recombination. In all galaxies the 10 μm continuum flux exceeds that which can be produced by the Lyman heating of dust. Our conclusions are that conditions in star-formation sources can be quite extreme, and that Brackett lines are flexible and powerful probes of conditions in external galaxies.

49798 (ESA-SP–290, pp. 477-480) **The strengths of the 2.3 μm CO band in luminous interacting and merging galaxies.** Doyon, R. (Imperial Coll. of Science and Technology, London (UK). Blackett Lab.); Joseph, R.D.; Wright, G.S. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Spectra between 2.0 and 2.5 μm are presented for NGC 1614, NGC 2798, NGC 4565, NGC 6240, NGC 253 and ARP 220. We show that the strength of the CO band at 2.36 μm in the nucleus of ARP 220 is abnormally strong; it is suggested that this anomaly may be the result of starburst activity. However, in the large aperture spectra of ARP 220 and other starburst galaxies, the strength of the CO band is consistent with a normal stellar population typical of a spiral galaxy. This suggests that the stellar continuum associated with the starburst is very diluted by the normal population, a situation consistent with the starburst being mostly localised in the nucleus.

49799 (ESA-SP–290, pp. 481-488) **Hα emission lines in high redshift quasars.** Espey, B.R. (Cambridge Univ. (UK). Inst. of Astronomy); Ward, M.J.; Carswell, R.F.; Smith, M.G.; Bailey, J.A. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We have obtained infrared spectra of the Hα lines in 18 medium to high redshift QSOs using the FIGS spectrometer at the Anglo-Australian Telescope, and nearly simultaneous optical spectra. We find that the Hα line is redshifted by an average of 1300 kms s^{-1} with respect to the lines from high ionization species such as CIV and that the low ionization lines such as OI and MgII are shifted by similar, or slightly smaller, amounts. These results are difficult to reconcile with any simple models currently available, but the similarity between the velocities of Hα and MgII, OI provides some support for models in which the Balmer lines are produced predominantly in a warm HI region, perhaps by X-ray heating, while the Lyman lines arise mainly in a population of optically thin clouds. We also present data on the change of Lyα/Hα with relative velocity.

49800 (ESA-SP–290, pp. 489-496) **The microwave background in steady-state cosmology.** Hoyle, F. (University Coll. of Swansea (UK)); Wickramasinghe, N.C. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

The form of the microwave background in strict steady-state cosmology necessarily differs from a black-body spectrum at millimetre wavelengths, and it does so in good agreement with recent astronomical data.

49801 (ESA-SP–290, pp. 497-500) **A search for the CO feature in active galactic nuclei.** Hunt, L. (European Southern Observatory, Garching (DE)); Melnick, J. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We present multiaperture 2.1 - 2.5 μm CVF spectra of NGC 3227, NGC 4151, and NGC 2782. The CO feature is not detected in either NGC 4151 or NGC 2782, but is marginally detected in NGC 3227. In addition, the data suggest the presence of a weak radial gradient in the strength of the CO feature in NGC 3227.

49802 (ESA-SP–290, pp. 501-506) **Evolutionary synthesis of the far-infrared emission in starburst galaxies.** Mas-Hesse, J.M.M. (Universidad Complutense de Madrid (ES). Dept de Astrofisica); Kunth, D. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We have used evolutionary population synthesis models to study the Far Infrared emission in star-forming galaxies. The dust particles are heated by the energetic photons originated in the young massive stars and reradiate the energy thermally in the FIR. Our models can explain the tight correlation between the FIR and the radio emission actually observed, considering both the thermal and the non-thermal contribution to the radio continuum. We have also studied the time evolution of the ratio FIR/LH β, which appears to be a good age indicator, complementary of other indicators as the H β equivalent width.

49803 (ESA-SP–290, pp. 507-510) **Infrared [FeII], H and H_2 lines in galaxy nuclei.** Moorwood, A.F.M. (European Southern Observatory, Garching (DE)); Oliva, E. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We present some preliminary results of follow-up spectroscopic studies at R$\simeq$ 150 with IRSPEC at the ESO 3.6m telescope of [FeII], H_2 and hydrogen recombination line emission in selected galaxies from a sample of 35 ranging from pure HII region-like to Seyfert 1's previously surveyed in the [FeII](1.64μm), H_2 (1 OS(1)) at 2.121 μm and Brγ lines. The new observations include measurements of additional lines of diagnostic interest e.g the H_2 (2 1S(1)) line at 2.247 μm, improved linewidth determinations and some limited spatial mapping.

49804 (ESA-SP–290, pp. 511-516) **Infrared profiles of five spiral galaxies.** Prieto, M. (Instituto de Astrofisica de Canarias, Tenerife (ES)); Campos, Aguilar, A.; Garcia, C. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

We present radial profiles of five spiral galaxies (NGC 5194, NGC 3627, NGC 3351, NGC 5055, NGC 4736) in the J and K filters of the near infrared, taken with the 1.5 m Carlos Sanchez Telescope of the Observatorio del Teide, Tenerife. We have calculate the IR photometric parameters of the disk and bulge of NGC 5194 (M51), and have detected IR spiral arms in this grand-design galaxy. We also find that all these intermediate type spiral galaxies present characteristic bumps of IR emission near the center.

49805 (ESA-SP–290, pp. 517-520) **Fluorescent molecular hydrogen emission from star-forming galaxies.** Puxley, P. (Edinburgh Univ. (UK). Dept of Astronomy); Hawarden, T.; Mountain, M. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

Near-infrared molecular hydrogen emission has been detected from the central star-forming complexes in nearby spiral galaxies. In all cases, measurement of several transitions demonstrates than the bulk of the line-emitting gas is excited by UV radiation, and not by shocks. For most galaxies, the ratio of the molecular (v=1-0 S(1)) to atomic (Brγ) hydrogen line strengths can be quantitatively understood if the emitting regions consist of individual hot stars (or small clusters) embedded within the parent molecular clouds or forming blisters at their surface. Large central star clusters may account for the handful of galaxies which display relatively weak H_2 emission.

49806 (ESA-SP–290, pp. 521-524) **H53α emission from M82.** Puxley, P. (Edinburgh Univ. (UK). Dept. of Astronomy); Brand, P.; Moore, T.; Mountain, M.; Nakai, N.; Yamashita, T. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

The first detection of H53α emission from another galaxy has been made. At the frequency of this transition (43 GHz) spontaneous emission dominates and dust extinction can be completely ignored. The inferred photo-ionization rate is $N_{LyC} = 1.1 \times 10^{54}$ s^{-1}; a factor of 5 larger than estimates based on large-aperture Brα observations due to significant dust attenuation at 4 μm. Together with other data, this high value of the ionization rate has important implications for the allowed mass-range of stars present.

49807 (ESA-SP–290, pp. 525-530) **Far-infrared fine-structure lines in active galaxies.** Spinoglio, L. (Consiglio Nazionale delle Ricerche, Frascati (IT). Ist. di Fisica dello Spazio Interplanetario); Malkan, M.A. European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

The line fluxes of the far-infrared fine-structure ionic and atomic transitions in the narrow-line regions (NLRs) of active galaxies are predicted using a standard photoionization model. Using the observed H β flux of the Seyfert 2 galaxy NGC 1068, and assuming the standard conditions in active galaxies NLRs, it appears that [CII] 158μm, [OI] 63μm, [NIII] 57μm, [NII] 122μm and [OIII] 88μm and 52μm are all detectable at high resolution (R=10^4) with the Long Wavelength Spectrometer (LWS) on board of the next ESA satellite ISO.

49808 (ESA-SP–290, pp. 531-534) **The correlation between radio and far-infrared emission for disk galaxies.** Voelk, H.J. (Max-Planck-Institut fuer Kernphysik, Heidelberg (DE)). European Space Agency, 75 - Paris (France). Sep 1989. (CONF-8812137–: Workshop on infrared spectroscopy in astronomy, Salamanca (Spain), 7-9 Dec 1988). In *Infrared Spectroscopy in astronomy: Proceedings of the 22. Eslab Symposium.* Order Number DE91702111. Source: NTIS (US Sales Only), PC A99/MF A01.

A theory is proposed for the correlation of the nonthermal radio continuum emission with the far infrared (FIR) emission from disk galaxies. The spatially integrated emission from each galaxy is considered. Assuming that the source strengths for relativistic electrons and energetic (ionising) photons, respectively responsible for the radio synchrotron and the FIR emission, are both proportional

to the supernova rate, it is supposed that the energy source for the FIR emission is essentially instantaneously communicating to the radiating dust grains. The radiating energetic electrons, however, have a much longer life-time. Yet over the volumina surrounding the electron sources within which those particles, whose energies correspond to the observed synchrotron frequency, lose their energy due to combined inverse Compton and synchrotron loss, the galaxies act as a calorimeter for these particles. The calorimeter function a fortiori pertains to all higher energy electrons. Assuming the integral observation to encompass this volume, the radio luminosity is calculated approximately. Taking the electron spectra to be due to diffusive shock acceleration at supernova remnant shocks, the net dependence of the radio emission on the spatial average of the magnetic field strength B is rather weak.

49809 (IAE–4828-6) **Cosmic ray production in plasma z pinches.** Vlasov, V.P.; Zhdanov, S.K.; Trubnikov, B.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 9p. (In Russian). Order Number DE91600990. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

It was shown that the hypothesis on a production of galactic cosmic rays in plasma cosmic pinches leads to the spectrum of accelerated particles $dN/DE \approx E^{-\nu}$ with the index $\nu=1+\sqrt{3}$ close to the observed one $\nu_0=2.7$ and it makes the present hypothesis rather likely.

49810 (IAE–4840-1) **Unified geometric theory of gravitation and electromagnetism: 5. Gravitational collapse and scalar radiation.** Bryushinkin, S.M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 8p. (In Russian). Order Number DE91600932. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

The question about the scalar wave radiation in the gravitational collapse is considered in terms of a five-dimensional closed isotropic model describing the collapse of a star consisting of a dust-like matter with a scalar field. It is demonstrated that the explosion of the supernova SN 1987A must produce a flux of scalar radiation energy which could be identified by the present-day gravitational detectors. The possibility of the effect of the supernova outburst on the Sun and the Earth is discussed. 13 refs.; 2 figs.

49811 (ISAS-SP–10) **High energy particle experiment for the GEOTAIL mission: GEOTAIL HEP.** Institute of Space and Aeronautical Science, Sagamihara, Kanagawa (Japan). Sep 1989. 114p. Order Number DE90520427. Source: NTIS (US Sales Only), PC A06/MF A01.

The high energy particle experiment for GEOTAIL mission was designed to understand the particle acceleration mechanism, energy flow, boundary dynamics and magnetic reconnection mechanism in the geotail region, solar flare particle acceleration mechanism, the propagation mechanism through interplanetary space, and the origin, lifetime and propagation mechanism of cosmic ray heavy ions. In order to achieve these objectives, particle detectors, burst detectors, medium energy isotope telescopes and a high energy isotope telescope will be placed in the spacecraft which will be launched in 1992 as one of the spacecraft missions in the International Solar Terrestrial Physics program. With these detectors, electrons, protons and helium, carbon, silicon and iron particles will be detected. The characteristics and the main technique used for each instrument to observe high energy particles are summarized. The details of the scientific objectives, the basic principle of particle identification, the electronic system and data processing system, key parameter information, telemetry data formats, preflight and in-flight calibration method and data an analysis plan are described in this report. (K.I.).

49812 (ITF–88-86) **Geometrical and dynamical characteristics of the Earth, the Moon and Terrestrial planets. Part 1: 1.Topographic surfaces and Gravitational fields.** Kamenskij, K.K.; Kislyuk, V.S.; Yatskiv, Ya.S. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1988. 21p. (In Russian). Order Number DE91600926. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Some aspects of the methodology of planetary dynamics are discussed. The reference frames for planetary dynamics are considered and the classification of planetary figures is given. Modern determinations of the parameters of topographic and gravitational figures of the Earth, the Moon and terrestrial planets are summarized and some peculiarities of geometrical and dynamical characteristics of these celestial bodies are considered. 33 refs.; 7 tabs.

49813 (ITF–88-174) **Formation and dynamics of shell structures in the astrophysical systems under the accretion of gas on the source of wind activity.** Gnatyk, B.I.; Krol', V.A. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1989. 24p. (In Russian). Order Number DE91600962. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The equations describing the interaction of rapid wind from the gravitating source of wind activity with a gas, that accress onto it are described in the approximation of infinitely thin layer. The formation and dynamics of shells that arise this interaction are investigated with the help of the equations obtained. The equations of motion for accreting gas and accretion flow are investigated, too. 49 refs.

49814 (ITP–88-167) **Statistical characteristics of turbulence in giant molecular clouds. Part 1: 1. Spectra in inertial range.** Ogul'chansky, Ya.Yu. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1989. 21p. Order Number DE91600963. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Using the invariant group of transformations of equations for characteristic functional of turbulence in compressible medium the spectral characteristics in inertial range are obtained. The influence of magnetic field on the turbulent spectra is evaluated. The application of the results obtained to supersonical turbulence in giant molecular clouds is discussed. 42 refs.

49815 (ITP–88-168) **Statistical characteristics of turbulence in giant molecular clouds. Part 2: 2. Clump properties.** Ogul'chanskij, Ya.Yu. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1989. 17p. Order Number DE91600964. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The statistical characteristics of clumps in giant molecular clouds are calculated with the help of assumption of self-similar spectrum for density logarithm fluctuations in isothermal compressible turbulent medium. The theory of peaks of Gaussian random field is used. The small space filling factor obtained (10^{-2}+10^{-3}) is well-correlated with observations. 19 refs.; 2 figs.

49816 (ITP–89-4) **Mutual coherent properties of the images of the quasar microlensed by star mass.** Verkhoglyadova, O.P.; Mandzhos, A.V. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1988. 21p. Order Number DE91600933. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The paper investigates the problem of mutual coherence of the radiation from two quasar images formed by a single point-mass gravitational lens with the mass of the order of solar mass. The expression for coherence degree is derived by asymptotic expansion in frequency. The coherence degree magnitude attains, in some cases, the values of 0.01-0.02 in the radio-frequency range. 9 refs.; 2 figs.; 2 tabs.

49817 (LA–11882-MS) **Discussion paper on environmental hazards on the Moon, in low Earth orbit, and in low Mars orbit.** Heiken, G. (comp.). Los Alamos National Lab., NM (USA). Sep 1990. 9p. Sponsored by U.S. DOE Management & Administration. DOE Contract W-7405-ENG-36. Order Number DE90017854. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

In a lunar base era, potential problems with dust will be serious. Lunar soils, which make up most of the regolith that covers the Moon's surface, are similar to silty sands on Earth, with mean grain sizes of 45–100 μm. Lunar dust has very low electrical conductivity and dielectric losses, permitting accumulation of electric charge under ultraviolet irradiation. Dust coatings cover thermally-sensitive surfaces, windows and visors, clog moving parts, and create continual abrasion hazards. Reduced gravity on the Moon favors the stability of aerosolized lunar soil and thereby will prolong its availability for inhalation if it is not removed from habitat atmosphere by

filtration systems. Some of the other hazards that must be considered include: Perception; on the lunar surface it is difficult to judge topographic details and distances, and Micrometeoroid impact; new materials are needed to protect astronauts and equipment at a lunar base. Spacecraft in low orbits around Earth and Mars experience strong chemical interactions where O_2 and CO_2 are photodissociated by sunlight. A ground-based facility at Los Alamos can be used to test these chemical interactions with materials proposed for use in spacecraft and satellites. Another component of the space exploration initiative is the environmental effects posed by man on the tenuous lunar and martian atmospheres. Before significant development occurs on these planets, these atmospheres must be measured. Orbiting sensors designed to measure these atmospheres can also be used to search for water.

49818 (N–90-24120) **Baryogenesis in extended inflation. Part 1: Baryogenesis via production and decay of supermassive bosons.** Barrow, J.D.; Copeland, E.J.; Kolb, E.W.; Liddle, A.R. Sussex Univ., Brighton (UK). May 1990. 20p. (NASA-CR–180615;NAS–1.26:180615). Source: NTIS, PC A03/MF A01.

Baryogenesis occurring during the thermalization stage at the end of extended inflation is considered. In extended inflation, the Universe passes through a first-order phase transition via bubble nucleation; inflation comes to an end when bubbles collide and their collisions convert energy stored in the bubble walls into particles. This naturally provides conditions well out of thermal equilibrium in which baryon number violating processes may proceed; the amount of baryon asymmetry which may be produced this way is estimated. The avoidance of a monopole or domain wall problem can also be ensured and isothermal density perturbations may arise as a remnant of spatial variation in the baryon asymmetry.

49819 (N–90-24122) **Periodic signatures for the detection of cosmic axions.** Turner, M.S. Fermi National Accelerator Lab., Batavia, IL (USA). May 1990. 10p. (NASA-CR–186608;NAS–1.26:186608;FERMILAB-PUB–90/89-A). Source: NTIS, PC A02/MF A01.

In a Sikivie-type cosmic-axion detector, both the width and position of the microwave signal due to axion-photon conversion depend upon the motions of the earth. Due to the orbital and rotational motions of the earth they will be modulated with periods of 1 sidereal day and 1 sidereal year, with amplitudes of about 0.1 percent and 5 percent respectively. Because of the intrinsically-high energy resolution of Sikivie-type detectors such periodic variations should be detectable. Such modulations would not only aid in confirming the detection of cosmic axions, but, if found, would also provide important information about the distribution of axions in the halo.

49820 (N–90-24123) **Cosmological baryon and lepton number in the presence of electroweak fermion-number violation.** Harvey, J.A.; Turner, M.S. Chicago Univ., IL (USA). Mar 1990. 12p. (NASA-CR–186609;NAS–1.26:186609;FERMILAB-PUB–90/49-A;EFI–90-33). Source: NTIS, PC A03/MF A01.

In the presence of rapid fermion-number violation due to nonperturbative electroweak effects certain relations between the baryon number of the Universe and the lepton numbers of the Universe are predicted. In some cases the electron-neutrino asymmetry is exactly specified in terms of the baryon asymmetry. Without introducing new particles, beyond the usual quarks and leptons, it is necessary that the Universe possess a nonzero value of B - L prior to the epoch of fermion-number violation if baryon and lepton asymmetries are to survive. Contrary to intuition, even though electroweak processes violate B + L, a nonzero value of B + L persists after the epoch of rapid fermion-number violation. If the standard model is extended to include lepton-number violation, for example through Majorana neutrino masses, then electroweak processes will reduce the baryon number to zero even in the presence of an initial B - L unless 20 M_L approximately greater than the square root of (T_{B-L} m_{Pl}) where M_L sets the scale of lepton number violation and T_{B-L} is the temperature at which a B - L asymmetry is produced. In many models this implies that neutrinos must be so light that they cannot contribute appreciably to the mass density of the Universe.

49821 (N–90-24211) **Evolution of light domain walls interacting with dark matter, part 1.** Massarotti, A. Chicago Univ., IL (USA). Apr 1990. 19p. (NASA-CR–181123;NAS–1.26:181123;FERMILAB-PUB–90/77-A). Source: NTIS, PC A03/MF A01.

The evolution of domain walls generated in the early Universe is discussed considering an interaction between the walls and a major gaseous component of the dark matter. The walls are supposed able to reflect the particles elastically and with a reflection coefficient of unity. A toy Lagrangian that could give rise to such a phenomenon is discussed. In the simple model studied, highly nonrelativistic and slowly varying speeds are obtained for the domain walls (approximately 10 (exp -2)(1+z)(exp -1)) and negligible distortions of the microwave background. In addition, these topological defects may provide a mechanism of forming the large scale structure of the Universe, by creating fluctuations in the dark matter (delta rho/rho approximately O(1)) on a scale comparable with the distance the walls move from the formation (in the model d less than 20 h(exp -1) Mpc). The characteristic scale of the wall separation can be easily chosen to be of the order of 100 Mpc instead of being restricted to the horizon scale, as usually obtained.

49822 (N–90-24213) **Thermal relics: Do we know their abundances.** Kamionkowski, M.; Turner, M.S. Illinois Univ., Chicago, IL (USA). May 1990. 31p. (NASA-CR–183334;NAS–1.26:183334;FERMILAB-PUB–90/97-A). Source: NTIS, PC A03/MF A01.

The relic abundance of a particle species that was once in thermal equilibrium in the expanding Universe depends upon a competition between the annihilation rate of the species and the expansion rate of the Universe. Assuming that the Universe is radiation dominated at early times the relic abundance is easy to compute and well known. At times earlier than about 1 sec after the bang there is little or no evidence that the Universe had to be radiation dominated, although that is the simplest and standard assumption. Because early-Universe relics are of such importance both to particle physics and to cosmology, three nonstandard possibilities are considered in detail for the Universe at the time a species' abundance froze in: energy density dominated by shear (i.e., anisotropic expansion), energy density dominated by some other nonrelativistic species, and energy density dominated by the kinetic energy of the scalar field that sets the gravitational constant in a Brans-Dicke-Jordan cosmological mode. In the second case the relic abundance is less than the standard value, while in the other two cases it can be enhanced by a significant factor. Two other more exotic possibilities for enhancing the relic abundance of a species are also mentioned–a larger value of Newton's constant at early times (e.g., as might occur in superstring or Kaluza-Klein theories) or a component of the energy density at early times with a very stiff equation of state (p greater than rho/3), e.g., a scalar field phi with potential V(phi) = Beta /phi/(exp n) with n greater than 4. Results have implications for dark matter searches and searches for particle relics in general.

49823 (N–90-24214) **Classical theory of radiating strings.** Copeland, E.J.; Haws, D.; Hindmarsh, M. Sussex Univ., Brighton (UK). Jun 1990. 12p. (NASA-CR–186607;NAS–1.26:186607;FERMILAB-PUB–90/119-A). Source: NTIS, PC A03/MF A01.

The divergent part of the self force of a radiating string coupled to gravity, an antisymmetric tensor and a dilaton in four dimensions are calculated to first order in classical perturbation theory. While this divergence can be absorbed into a renormalization of the string tension, demanding that both it and the divergence in the energy momentum tensor vanish forces the string to have the couplings of compactified N = 1 D = 10 supergravity. In effect, supersymmetry cures the classical infinities.

49824 (N–90-24881) **Axions and SN 1987A: Axion trapping.** Burrows, A.; Ressell, M.T.; Turner, M.S. Arizona Univ., Tucson, AZ (USA). May 1990. 30p. (NASA-CR–186604;NAS–1.26:186604;FERMILAB-PUBL–90/81-A). Source: NTIS, PC A03/MF A01.

If an axion of mass between about 10(exp -3) eV and 1 eV exists, axion emission would have significantly affected the cooling of the nascent neutron star associated with SN 1987A. For an axion

of mass less than about 10(exp -2) eV, axions produced deep inside the neutron star simply stream out; in a previous paper this case has been addressed. Remarkably, for an axion of mass greater than about 10(exp -2) eV axions would, like neutrinos, have a mean-free path that is smaller than the size of a neutron star, and thus would become trapped and radiated from an axion sphere. In this paper the trapping regime is treated by using numerical models of the initial cooling of a hot neutron star that incorporate a leakage approximation scheme for axion-energy transport. The axion opacity is computed due to inverse nucleon-nucleon, axion bremsstrahlung, and numerical models are used to calculate the integrated axion luminosity, the temperature of the axion sphere, and the effect of axion emission on the neutrino bursts detected by the Kamiokande 2 (K2) and Irvine-Michigan-Brookhaven (IMB) water-Cherenkov detectors. The larger the axion mass, the stronger the trapping and the smaller the axion luminosity. The earlier estimate is confirmed and refined of the axion mass above which trapping is so strong that axion emission does not significantly affect the neutrino burst. Based upon the neutrino-burst duration–the most sensitive barometer of axion cooling–it is concluded that for an axion mass of greater than about 0.3 eV, axion emission would not have had a significant effect on the neutrino bursts detected by K2 and IMB. The present work, together with the previous work, strongly suggests that an axion with mass in the interval 10(exp -3) eV to 0.3 eV is excluded by SN 1987A.

49825 (PSC–6) **High-energy protons produced by a large-amplitude magnetosonic wave and associated gamma radiation through neutral pion decay.** Ohsawa, Y.; Terashima, Y. Nagoya Univ. (Japan). Plasma Science Center. Feb 1990. 37p. Order Number DE90520190. Source: NTIS (US Sales Only), PC A03/MF A01.

Spectra of ions accelerated by a large-amplitude magnetosonic wave and spectra of gamma radiation from the decay of neutral pions which are produced in energetic ion collisions are studied through particle simulations and numerical calculations. A large-amplitude magnetosonic wave can promptly accelerate ions to relativistic energies for a rather strong magnetic field ($\omega_{ce} >$ or approx. ω_{pe}). This acceleration is much more rapid and efficient than usual stochastic acceleration and can occur in solar flares. Ion spectra thus generated can have various shapes depending on some plasma parameter. The maximum energy is, however, well defined, and ion spectra have strong downward curvatures near the maximum values. Further, a particle simulation shows that this mechanism can produce a (truncated) power-law form with a spectral index s = 1.2. Energy spectra of gamma radiation are then numerically obtained for this type of ion energy spectrum and for the modified Bessel function forms derived from a stochastic acceleration model. Power-law forms of ion spectra produce much harder photon energy-spectra than the modified Bessel function forms. (author).

49826 (SAAO–14) **The South African Astronomical Observatory.** South African Astronomical Observatory, Cape Town (South Africa). 1989. 41p. Source: Available from the South African Astronomical Observatory, PO Box 9, Observatory, 7935, South Africa.

Report for the period 1989 January 1 to October 31.

The research work discussed in this report covers a wide range, from work on the nearest stars to studies of the distant quasars, and the astronomers who have carried out this work come from universities and observatories spread around the world as well as from South African universities and from the South African Astronomical Observatory (SAAO) staff itself. A characteristic of much of this work has been its collaborative character. SAAO studies in 1989 included: supernovae 1987A; galaxies; ground-based observations of celestial x-ray sources; the Magellanic Clouds; pulsating variables; galactic structure; binary star phenomena; the provision of photometric standards; nebulous matter; stellar astrophysics, and astrometry.

49827 (SAAO–14, pp. 22-26) **Stellar astrophysics.** South African Astronomical Observatory, Cape Town (South Africa). 1989. In *The South African Astronomical Observatory.* Source: Available from the South African Astronomical Observatory, PO Box 9, Observatory, 7935, South Africa.

Report for the period 1989 January 1 to October 31.

The existence of extremely pure mono-elemental atmospheres in most white dwarfs is well understood. Attention is now focused on the few exceptions. An analysis was made at the South African Astronomical Observatory (SAAO) of an unusual white dwarf whose atmosphere contains various metallic elements. Other stellar studies conducted by the SAAO include research on: T Tauri stars; hydrogen-deficient stars and RCB variables; flare stars and RS CVn stars; B[e] stars; the periodicity of Be star variations; Wolf-Rayet stars; IRAS sources; Hind's star; masses of AGB stars and their descendent white dwarfs, and carbon and S-type stars. 4 figs.

49828 (SAAO–14, pp. 21-22) **Nebulous matter.** South African Astronomical Observatory, Cape Town (South Africa). 1989. In *The South African Astronomical Observatory.* Source: Available from the South African Astronomical Observatory, PO Box 9, Observatory, 7935, South Africa.

Report for the period 1989 January 1 to October 31.

Short note. NEBULAE/star evolution; NEBULAE; PLANETARY NEBULAE; VELOCITY

49829 (SAAO–14, pp. 19-21) **Binary star phenomena.** South African Astronomical Observatory, Cape Town (South Africa). 1989. In *The South African Astronomical Observatory.* Source: Available from the South African Astronomical Observatory, PO Box 9, Observatory, 7935, South Africa.

Report for the period 1989 January 1 to October 31.

Novae are of considerable current interest to astronomers, both for the understanding of the physics of the nova outburst and for their use as extragalactic distance indicators. Studies of several novae in the galaxy have been made at the South African Astronomical Observatory (SAAO) in recent years, including a study of Nova Mus 1983. The SAAO has also been involved in studies of the interacting binary white dwarf system V803 Cen. 5 figs.

49830 (SAAO–14, pp. 13-17) **Pulsating variables.** South African Astronomical Observatory, Cape Town (South Africa). 1989. In *The South African Astronomical Observatory.* Source: Available from the South African Astronomical Observatory, PO Box 9, Observatory, 7935, South Africa.

Report for the period 1989 January 1 to October 31.

The study of stellar pulsations is a major route to the understanding of stellar structure and evolution. At the South African Astronomical Observatory (SAAO) the following stellar pulsation studies were undertaken: rapidly oscillating Ap stars; solar-like oscillations in stars; 8-Scuti type variability in a classical Am star; Beta Cephei variables; a pulsating white dwarf and its companion; RR Lyrae variables and galactic Cepheids. 4 figs.

49831 (SAAO–14, pp. 6-7) **Supernova 1987A in the Large Magellanic Cloud.** South African Astronomical Observatory, Cape Town (South Africa). 1989. In *The South African Astronomical Observatory.* Source: Available from the South African Astronomical Observatory, PO Box 9, Observatory, 7935, South Africa.

Report for the period 1989 January 1 to October 31.

SN1987A, the supernova in the Large Magellanic Cloud, is now an inconspicuous object at optical wavelengths. However it remains of exceptional interest since observations can be made of the transition from supernova to supernova remnant. The photometric data show not only that dust formed within the ejecta but that it was concentrated in dense clumps. 4 figs.

49832 (SAAO–14, pp. 10-13) **Ground-based observations of celestial x-ray sources.** South African Astronomical Observatory, Cape Town (South Africa). 1989. In *The South African Astronomical Observatory.* Source: Available from the South African Astronomical Observatory, PO Box 9, Observatory, 7935, South Africa.

Report for the period 1989 January 1 to October 31.

A combination of space-based x-ray observations with ground-based optical work is a very fruitful way of studying those binary star systems where the two components are so close together that they exchange matter. The results of a four-day simultaneous optical and x-ray observation of a celestial x-ray source, conducted by the South African Astronomical Observatory (SAAO), show that optical radiation is not simply reprocessed X-rays and that the optical

and x-ray fluxes are correlated. Other x-ray emitting, interacting binaries studied at SAAO are intermediate polars and the AM Her System V834 Cen. 3 figs.

49833 (SAAO–14, pp. 17-19) **Galactic structure.** South African Astronomical Observatory, Cape Town (South Africa). 1989. In *The South African Astronomical Observatory*. Source: Available from the South African Astronomical Observatory, PO Box 9, Observatory, 7935, South Africa.

Report for the period 1989 January 1 to October 31.

The occurrence of hot, apparently normal, massive stars far from the galactic plane has been a major puzzle in an understanding of galactic structure and evolution. Such stars have been discovered and studied at the South African Astronomical Observatory (SAAO) over a number of years. During 1989 further evidence has been obtained indicating that these stars are normal, massive objects. Other studies of galactic structure conducted by the SAAO have included research on: the central bulge region of our galaxy; populations of M giants in the galaxy; a faint blue object survey; a survey of the galactic plane for distant Cepheid variables; interstellar reddening, and K-type dwarfs as tracers for the gravitational force perpendicular to the galactic plane. 1 fig.

49834 (SAAO–14, pp. 12-13) **The Magellanic clouds.** South African Astronomical Observatory, Cape Town (South Africa). 1989. In *The South African Astronomical Observatory*. Source: Available from the South African Astronomical Observatory, PO Box 9, Observatory, 7935, South Africa.

Report for the period 1989 January 1 to October 31.

As the two galaxies nearest to our own, the Magellanic Clouds hold a special place in studies of the extragalactic distance scale, of stellar evolution and the structure of galaxies. In recent years, results from the South African Astronomical Observatory (SAAO) and elsewhere have shown that it is possible to begin understanding the three dimensional structure of the Clouds. Studies of Magellanic Cloud Cepheids have continued, both to investigate the three-dimensional structure of the Clouds and to learn more about Cepheids and their use as extragalactic distance indicators. Other research undertaken at SAAO includes studies on Nova LMC 1988 no 2 and red variables in the Magellanic Clouds.

49835 (SAAO–14, pp. 7-10) **Galaxies.** South African Astronomical Observatory, Cape Town (South Africa). 1989. In *The South African Astronomical Observatory*. Source: Available from the South African Astronomical Observatory, PO Box 9, Observatory, 7935, South Africa.

Report for the period 1989 January 1 to October 31.

In studies of the large scale structure of the universe there is a continuing need for extensive galaxy redshift determinations. Optically selected redshift surveys are of particular importance, since flux-limited samples record much higher space densities of galaxies than samples of similar size selected in other wavebands. A considerable amount of the South African Astronomical Observatory (SAAO) observing time is currently being devoted to carrying out a large southern galaxy redshift survey. A recently completed study, the Durham-SAAO redshift survey suggests that the mean density of matter is well below the critical limit for a closed universe and also that the universe may be homogenous at very large scales. Other research conducted by the SAAO include studies on: the distribution of galaxies; Seyfert galaxies; starburst and IRAS galaxies; interacting and compact galaxies; a re-evaluation of the Cepheid distance to NGC 300, and a search for quasars behind galaxies. 1 fig.

49836 (UCRL-JC–104223-Rev.1) **A new site for the astrophysical gamma-process: Revision 1.** Howard, W.M. (Lawrence Livermore National Lab., CA (USA)); Meyer, B.S.; Woosley, S.E. Lawrence Livermore National Lab., CA (USA). May 1990. 6p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-9006212–3-Rev.1: International symposium on nuclear astrophysics: nuclei in the cosmos, Vienna (Austria), 18-22 Jun 1990). Order Number DE90017519. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In this paper we propose that the requisite thermodynamic conditions may occur in Type Ia supernovae, when carbon-oxygen white dwarfs explode by deflagration. The cores of such stars have undergone extensive s-processing during helium flashes to provide sufficient s-process seeds for the light p-isotopes. When these stars undergo a deflagration disruption, these s-process isotopes can be transmuted into p-isotopes in the mass region of the core where the deflagration flame is extinguished and the temperatures approach the range $2.4 \lesssim T_9 \lesssim 3.2$. At these temperatures the enhanced s-process seeds are efficiently transmuted into p-isotopes on a timescale of less than 1 sec. To examine this astrophysical site, we calculate the nucleosynthesis that takes place when such mass zones are heated by the deflagration wave and then expand and compare our results with the solar-system distribution of the p-isotopes. 12 refs., 1 fig.

49837 Observations of Cygnus X-2 with IUE: Ultraviolet results from a multiwavelength campaign. Vrtilek, S.D.; Raymond, J.C.; Garcia, M.R.; Verbunt, F.; Hasinger, G.; Kuerster, M. 42p. Fachinformationszentrum Karlsruhe, Eggenstein-Leopoldshafen (DE) (1989).

The observations of the low-mass x ray binary, Cyg X-2, taken with the International Ultraviolet Explorer (IUE) in a campaign conducted in June and October of 1988 are reported. A direct relationship between the strength of the UV continuum and line emission and the placement of the x ray spectrum in one of three branches of the so-called Z-shaped curve is found by comparison with simultaneous x ray observations. All three previously known x ray spectral states are detected; the UV continuum and line emission increase monotonically along the Z with the least emission in the horizontal branch, and the most in the flaring branch. Emission lines due to HeII, CIV, NIII, NIV, NV, SiIV, and MgII are observed.

49838 A model for the distribution of dark matter, galaxies, and the intergalactic medium in a cold dark matter-dominated universe. Ryu, D. (Fermi National Accelerator Lab., Batavia, IL (USA)); Vishniac, E.T.; Chiang, W.H. pp. 228-238 of Proceedings of the fourteenth Texas symposium on relativistic astrophysics: Volume 571. Fenyves, E.J. The New York Academy of Sciences, New York, NY (USA) (1989). (CONF-881268–: 14. Texas symposium on relativistic astrophysics, Dallas, TX (USA), 11-16 Dec 1988).

Until now, most studies on the cold dark matter (CDM) universe have considered only the distribution of the dark matter and compared that with the observed distribution of galaxies. Even though the dark matter determines the overall dynamics of the large-scale structure, galaxies form out of the baryonic matter whose density and velocity distributions can be different from those of the dark matter, depending on the thermal history of the universe. In this paper, the authors study both the dark matter component and the baryonic component, that is, galaxies and the IGM, with several simplifying assumptions, by explicitly following the evolution. The dark matter, galaxies, and IGM are coupled through gravity; galaxies form out of the IGM by taking mass and momentum, whereas the IGM responds to the energy input from the galaxies.

49839 Primeval and rejuvenated galaxies: A new approach to the search for them. Ozernoy, L.M. (Los Alamos National Lab., NM (USA)). pp. 219-227 of Proceedings of the fourteenth Texas symposium on relativistic astrophysics: Volume 571. Fenyves, E.J. The New York Academy of Sciences, New York, NY (USA) (1989). (CONF-881268–: 14. Texas symposium on relativistic astrophysics, Dallas, TX (USA), 11-16 Dec 1988).

Close interactions between primeval galaxies including mergings could play a decisive role in their early history. These interactions result in a thermal continuum radiation spectrum expected to peak in the far infrared at $\lambda_0 \sim 100$ μm (in the rest frame), which is roughly independent of whether the grain temperature is determined by the radiation of OB stars or by the dissipation of kinetic energy in galaxy-galaxy collisions. The author discusses how such a peak redshifted to submillimeter wave range could be an observational signature of both primeval and rejuvenated galaxies. Detection of those peaks would provide valuable clues to the origin of galaxies and open tremendous prospects for observational cosmology.

49840 The great supernova of 1987. Woosley, S.E. (California Univ., Santa Cruz, CA (USA)). pp. 397-413 of Proceedings of the fourteenth Texas symposium on relativistic astrophysics: Volume 571. Fenyves, E.J. The New York Academy of Sciences, New

York, NY (USA) (1989). Grant AST-84-18185. (CONF-881268–: 14. Texas symposium on relativistic astrophysics, Dallas, TX (USA), 11-16 Dec 1988).

Seven hundred day after the explosion of the brightest supernova in four centuries, astronomers continue to be both excited and perplexed by its behavior. By now, the supernova has received considerably attention in the literature. This paper emphasizes several aspects of the supernova that continue to be of special interest. These include: the evolution of the presupernova star, why it was blue, what its composition and core structure were; the iron core mass, explosion mechanism, and certain aspects of the neutrino burst; the detailed isotopic composition of the ejecta; the light curve and the requirement for mixing; the expected continued evolution of the supernova at all wavelengths given both the presence of several radioactivities as well as a central collapsed object as a power source; and late breaking news regarding the pulsar.

49841 Self-sustained mechanism of mass transfer and evolution of very low mass x-ray binaries. Tavani, M. (Lawrence Livermore National Lab., CA (USA)); Kluzniak, W.; Ruderman, M.; Shaham, J. pp. 427-430 of Proceedings of the fourteenth Texas symposium on relativistic astrophysics: Volume 571. Fenyves, E.J. The New York Academy of Sciences, New York, NY (USA) (1989). (CONF-881268–: 14. Texas symposium on relativistic astrophysics, Dallas, TX (USA), 11-16 Dec 1988).

The discovery of the eclipsing millisecond pulsar PSR 1957 + 20 provides evidence that the evolution of some low-mass x-ray binaries (LMXBs) may be driven by radiation from their primary neutron stars. The observation of a strong outflowing wind from the very low mass ($m \simeq 0.02\ M_{\odot}$) degenerate dwarf companion underfilling its Roche lobe supports a theoretical evolutionary scenario (proposed even before the discovery of PSR 1957 + 20) that can lead to such a final state. In earlier evolutionary stages, high-rate mass transfer in LMXBs could be driven by radiation (x-rays) and/or ~ 1-MeV γ rays) illuminating the secondary, which self-sustains a (bootstrap) mass transfer at rates close to the neutron star's Eddington limit. Bootstrapped mass transfer could control the binary evolution even when gravitational radiation or other mechanisms for removing angular omentum from the system (e.g., magnetic braking) would produce only a small mass loss rate.

49842 The 1973 x-ray outburst of 4U1145-61. Terrell, J. (Los Alamos National Lab., NM (USA)). pp. 534-538 of Proceedings of the fourteenth Texas symposium on relativistic astrophysics: Volume 571. Fenyves, E.J. The New York Academy of Sciences, New York, NY (USA) (1989). (CONF-881268–: 14. Texas symposium on relativistic astrophysics, Dallas, TX (USA), 11-16 Dec 1988).

This paper reports on the Vela 5B spacecraft, launched on 23 May 1969. It was the first spacecraft capable of long-term x-ray astronomy. It surveyed the entire x-ray sky, in the 3–12 keV range, for the unprecedented period of 10 years, finally ceasing operation on 19 June 1979. The scintillator-photomultiplier detector, collimated to 6.1° x 6.1 ° (FWHM), was pointed at 90° to the earth-oriented spin axis of the spacecraft. Thus, Vela 5B scanned a great circle of the sky during each 64-second rotation and mapped the x-ray sky twice in each 112-hour orbit. Individual sources were in view for several hours in each 56-hour period.

49843 Distance limits for gamma-ray bursts from galactic neutron stars. Hartmann, D. (California Univ., Santa Cruz, CA (USA)). pp. 532-533 of Proceedings of the fourteenth Texas symposium on relativistic astrophysics: Volume 571. Fenyves, E.J. The New York Academy of Sciences, New York, NY (USA) (1989). Grant AST-88-13649. (CONF-881268–: 14. Texas symposium on relativistic astrophysics, Dallas, TX (USA), 11-16 Dec 1988).

To date, more than ~ 400 γ-ray burst events have been recorded by detectors aborad widely separated spacecraft, but their origin remains a mystery. Their positions in the sky exhibit a high degree of isotropy and they do not show any evidence of angular clustering on scales between 1° and 100°. Their brightness distribution is consistent with sources drawn from a spatially homogeneous parent population. No counterpart to a γ-ray burst source has yet been unambiguously identified in any wavelength band. This paper discusses how these observational facets have left the distance scale of γ-ray bursts undetermined and we are faced with the great debate about the galactic or extragalactic origin of this extraordinary phenomenon.

49844 The intermediate-degree g-mode spectrum of the sun: its properties and their implications to the solar neutrino paradox. Rabaey, G.F. (Arizona Univ., Tucson, AZ (USA). Dept. of Physics); Hill, H.A. pp. 594-600 of Proceedings of the fourteenth Texas symposium on relativistic astrophysics: Volume 571. Fenyves, E.J. The New York Academy of Sciences, New York, NY (USA) (1989). (CONF-881268–: 14. Texas symposium on relativistic astrophysics, Dallas, TX (USA), 11-16 Dec 1988).

The intermediate-degree gravity modes ($l = 30$) that reside in the region, $0.05 < r/R_{\odot} < 0.45$, of the sun provide a useful observational tool for probing the solar interior. The first evidence of the excitation of long-period solar oscillations (frequencies between ~ 250 μHz and 1.7 mHz) was obtained in the 1970s. In 1979 evidence was found that indicated the excitation of a number of gravity modes with frequencies between ~ 250 μHz and ~ 400 μHz during an examination of the 1973 solar diameter observations taken at SCLERA. However, it was not until 1986 that a researcher identified and made preliminary classifications of a set of four intermediate-degree gravity-mode multiplets using 1979 differential radius observations. These four multiplets were found to have $m = 0$ eigenfrequencies of $\nu_N \approx 350$ μHz and a classified $l = 30$, where n is the radial eigenvalue radial order), l is the angular eigenvalue (angular degree), and m is the azimuthal eigenvalue (angular order). These modes also were observed to the mode-coupled (phase-locked). The properties of these four multiplets (and, in particular, the properties of the multiplet tentatively classified as $n = 15$, $l = 30$) have been used as a starting point for an extensive study of the intermediate-degree g-modes in the 240–250 μHz region of the power spectra. The results of this analysis are presented and the relevance to the solar neutrino paradox is discussed.

49845 Status of solar neutrino observations and prospects for future experiments. Lande, K. (Westinghouse Electric Corp., Concordville, PA (USA). Combustion Turbine Engineering Dept.). pp. 553-560 of Proceedings of the fourteenth Texas symposium on relativistic astrophysics: Volume 571. Fenyves, E.J. The New York Academy of Sciences, New York, NY (USA) (1989). (CONF-881268–: 14. Texas symposium on relativistic astrophysics, Dallas, TX (USA), 11-16 Dec 1988).

For the past twenty years, an experiment in the Homestake Gold Mine in Lead, South Dakota, has been engaged in the measurement of the neutrino flux emitted by fusion reactions in the core of the sun. Within the past two years, a second detector, located at Kamioka, Japan, has also observed these neutrinos and has verified the Homestake neutrino flux measurements. Therefore, it has now been experimentally demonstrated that fusion reactions indeed occur in the sun. The observed flux is a factor of three to four smaller than that predicted by the standard solar model (SSM). In this report the author presents the results of the present experiments, describes several new experiments that should be operational within the coming year or so, and discusses suggestions for the difference between the observed and predicted solar neutrino fluxes.

49846 Thermal Comptonization models for gamma-ray emission from black-hole sources. Dermer, C.D. (Lawrence Livermore National Lab., CA (USA). Physics Dept.). pp. 513-521 of Proceedings of the fourteenth Texas symposium on relativistic astrophysics: Volume 571. Fenyves, E.J. The New York Academy of Sciences, New York, NY (USA) (1989). DOE Contract W-7405-ENG-48. (CONF-881268–: 14. Texas symposium on relativistic astrophysics, Dallas, TX (USA), 11-16 Dec 1988).

The salient features associated with gamma-ray emission from the above-mentioned sources are summarized, beginning with Cygnus X-1, which is the best-studied black-hole candidate. Because of similarity in properties, models developed to explain the x-ray and gamma-ray observations of Cygnus X-1 can be equally applied to AGN. In this review, successes and limitations of thermal Comptonization models for the high-energy emission of black-hole sources are considered. Such models were proposed a dozen years ago to explain the shape of the x-ray spectra of these objects, but have undergone considerable theoretical development

in the past decade in order to be extended to gamma-ray energies. Models associated with monoenergetic electron injection followed by a pair cascade, shock acceleration, the Penrose–Compton mechanism, or pion production from nonthermal proton distributions are not treated here.

49847 The steady state solutions of radiatively driven stellar winds for a non-Sobolev, pure absorption model. Poe, C.H. (High Altitude Observatory, Boulder, CO (USA)); Owocki, S.P.; Castor, J.I. *Astrophysical Journal (USA),* 358: 199-213 (Jul 1990).

The steady state solution topology for absorption line-driven flows is investigated for the condition that the Sobolev approximation is not used to compute the line force. The solution topology near the sonic point is of the nodal type with two positive slope solutions. The shallower of these slopes applies to reasonable lower boundary conditions and realistic ion thermal speed v(th) and to the Sobolev limit of zero of the usual Castor, Abbott, and Klein model. At finite v(th), this solution consists of a family of very similar solutions converging on the sonic point. It is concluded that a non-Sobolev, absorption line-driven flow with a realistic values of v(th) has no uniquely defined steady state. To the extent that a pure absorption model of the outflow of stellar winds is applicable, radiatively driven winds should be intrinsically variable. 34 refs.

49848 Thermal relaxation oscillations in horizontal-branch stars. Salati, P. (California Univ., Berkeley (USA)); Raffelt, G.; Dearborn, D. *Astrophysical Journal (USA),* 357: 566-572 (Jul 1990).

In a recent numerical investigation of the effect of trapped cosmions on horizontal-branch (HB) stars, thermal pulses were observed to occur if the energy transfer provided by these weakly interacting particles was chosen to be efficient enough to break convection. A simple analytic two-zone model of the core of an HB star is presented which allows the interpretation of these pulsations as oscillations of thermal relaxation between the small energy generating nuclear core and the overlying gravothermal buffer. It is shown that any novel form of energy transfer which breaks convection will lead to this behavior where the usual stellar conductive equilibrium is replaced by a limit cycle. The star follows this cycle, oscillating with a period roughly given by the Kelvin-Helmholtz time scale of the core. 20 refs.

49849 Isocurvature baryon-dominated open universe - Structure of galactic halos. Hoffman, Yehuda (Technion - Israel Institute of Technology, Haifa (Israel)). *Astrophysical Journal (USA),* 357: L5-L7 (Jul 1990).

Structure of galactic halos in the isocurvature baryon-dominated open universe models is calculated. The halos' rotation curves are calculated analytically, based on the secondary infall paradigm. The nonvanishing curvature of the expanding universe introduces scale dependence of final virial structure of the halos, assuming they are formed dissipationlessly by hierarchical clustering. For primordial scale-free power spectra, with a spectral index in the range of n = 0 to -1, and Omega(0) of about 0.1, the predicted galactic halos rotation curves are found to be steeply decreasing with radius. Given the observed amplitude and extent of the rotation curves of giant spiral galaxies and the nucleosynthesis bounds on the baryon mean density, the allowed range of parameters yields only halos with falling rotation curves, in clear disagreement with the observed flat galactic rotation curves. 33 refs.

49850 (AD-A–222554/8/XAB) **Thermosphere-Ionosphere coupling: An experiment in interactive modeling.** Forbes, J.M.; Roble, R.G. Boston Univ., MA (USA). 1 Jan 1990. 8p. Contract F49620-88-C-0111. Source: NTIS, PC A02/MF A01.

Pub. in Jnl. of Geophysical Research, Vol. 95, No. A1, 201-208(1 Jan 1990).

The NCAR thermosphere general circulation model (TGCM) is used to perform a series of controlled experiments aimed at better understanding the interactive coupling between ionospheric plasma densities and thermospheric neutral winds. The experiments are simple and controlled to facilitate identification of governing mechanisms. The interaction is accomplished by parameterizing the F layer peak height (hmF2) in an empirical ionospheric model in terms of the meridional wind (Vsouth) and forcing hmF2 and Vsouth to remain mutually coupled in a dynamic calculation. Interactive computations are performed where the TGCM is driven by 30-kV and 90-kV cross polar cap potentials and are compared with corresponding reference simulations where hmF2 is constrained to a balance height near 280 km with a small (about 20 km) diurnal variation. Mutual coupling between hmF2 and Vsouth is found to be weak during the daytime when the F layer exhibits a broad vertical structure. At night, when the F2 layer is more localized, the neutral dynamic structure is dependent on whether hmF2 is significantly above or below the altitude (approximately 275-300 km) at which ion drag effectively competes with viscosity in the neutral momentum balance. At Arecibo during both levels of high-latitude forcing the premidnight elevation (+75 km) of hmF2 relative to a nighttime height of approximately 290 km is accompanied by an increase (about 50 m/s) in the zonal wind above 250 km relative to the noninteractive simulation. A much smaller effect, characterized by an 8-hour periodicity spanning 24 hours, is seen in the meridional windcomponent.

49851 (AD-A–222574/6/XAB) **Conditional climatology of Ap: The relationship between solar flares and geomagnetic storms.** Wilson, D.L.; Edson, R.T. Air Force Environmental Technical Applications Center, Scott AFB, IL (USA). Feb 1990. 104p. (USAFETAC/TN–90/001). Source: NTIS, PC A06/MF A01.

This report documents a study of USAFETAC's optical solar flare database and its relationship to Gottingen's planetary geomagnetic index (Ap). The study was based on solar flare data with an 11-year period of record (1975 to 1986–Solar Cycle 21). After solar flares and Ap indices were studied separately, more than 27,000 flare reports were merged with 3-hour Ap values for 7 days after each flare. The resultant dataset was analyzed with respect to certain flare characteristics (such as importance, brightness, duration, solar location, and phase of the solar cycle) to find the best predictor of geomagnetic storming. The results were summarized in contingency tables (provided in Appendix B) for use as solar forecasting aids. Some flares were found to have more of an influence on the Earth's geomagnetic field than others. Of all the features studied, a flare's importance and location on the disk seemed to be best predictors of geomagnetic storming.

49852 (AD-A–222580/3/XAB) **Simultaneous relativistic-electron and auroral-particle access to the polar caps during interplanetary magnetic field Bz northward: A scenario for an open-field line source of auroral particles.** Gussenhoven, M.S.; Mullen, E.G. Air Force Geophysics Lab., Hanscom AFB, MA (USA). 1 Dec 1989. 14p. (GL-TR–90-0139). Source: NTIS, PC A03/MF A01.

Pub. in Jnl. of Geophysical Research, Vol. 94, No. A12, 17121-17132(1 Dec 1989).

The large magnetic storm of February 1986 provides a unique opportunity to assess whether existing open-closed theories of the magnetosphere can consistently account for precipitating particle signatures measured at 840 km under a wide variety of solar wind and solar particle conditions. The simultaneous observation are prepared for relativistic electrons associated with a solar proton event and of auroral ions and electrons associated with a polar cap arc event, made across the central polar cap using detectors on board the Defense Meteorological Satellite Program (DMSP) satellites. On February 7 while a solar proton event was still in progress, polar cap arc activity (interplanetary magnetic field (IMF)B2 large and positive, Kp = 3+) occurred prior to a prolonged period of oval arc activity (IMF B2 large and negative, Kp = 6-). Throughout these periods the following are identified: the equatorward edge of the relativistic electron precipitation; the outer zone electron poleward and equatorward boundaries; the equatorward auroral electron and ion boundaries; and the auroral electron transition boundary. The history of the boundaries is presented as the transition from intense polar cap activity to intense auroral oval activity takes place. The data clearly show that the polar cap region of relativistic electron precipitation does not change significantly as the sign of B2 changes. On the other hand, the boundary layer

population, which contains auroral arcs and 1- to 10-keV ion precipitation, expands to fill most of the polar cap for B2 northward and greatly contracts as B2 turns southward. The expansion is not symmetric between poles.

49853 (AD-A-222609/0/XAB) **Viking data analysis. Final technical report, August 1986-March 1990.** Quinn, J.M. Lockheed Missiles and Space Co., Palo Alto, CA (USA). Space Sciences Lab. 25 May 1990. 59p. Contract N00014-86-C-0159. Source: NTIS, PC A04/MF A01.

The polar orbiting Swedish research satellite, Viking, obtained extensive data on auroral zone phenomena. Data from the Viking Hot Plasma Experiment have been analyzed to investigate auroral acceleration and the transport of plasma between the ionosphere and magnetosphere. A detailed statistical study was made of the relative location of ionospheric ion acceleration with respect to various magnetospheric plasma boundary signatures. The results indicate that the ion acceleration occupies a much wider latitudinal extent of the auroral zone than is expected by many current models; and that the regions of ion acceleration are ordered by, and move with, several magnetospheric plasma boundaries. Multi-spacecraft analyses of transverse ion acceleration broadband low-frequency waves have been performed and indicate that this mechanism is an important factor in transporting plasma into the magnetosphere.

49854 (AD-A-222612/4/XAB) **Development of a comprehensive magnetohydrodynamic model of solar-terrestrial interaction. Final report, 1 March 1986-30 September 1988.** Stahara, S.S. RMA Aerospace, Inc., Mountain View, CA (USA). Dec 1988. 110p. Contract F49620-86-C-0035. (RMA-TR-0103). Source: NTIS, PC A06/MF A01.

The work relates to the preliminary development of a comprehensive, multi-level, 3-D magnetohydrodynamic model that seeks to describe the detailed, global interaction of the solar wind plasma and magnetic field with the Earth's geospace. The development of five separate advanced computational submodels of the complete interaction model involves approximately 42,000 lines of fortran source code. These submodels provide the capability for quantitatively simulating a variety of steady and unsteady phenomena associated with the solar wind-terrestrial environment interaction process to a degree previously unattainable. A number of these new developments have been incorporated into a core interaction submodel that can be structured to work in both a rapid warning mode for spacecraft protection as well as in a detailed scientific analysis mode for fundamental studies. The other submodels developed either simulate similar phenomena of the solar wind-terrestrial environment interaction process as the core interaction submodel but at a higher level of simulation accuracy or simulate additional interaction phenomena.

49855 (AD-A-222861/7/XAB) **Amplitude and phase scintillation and ionospheric irregularities at sub-auroral latitudes. Interim report, 30 September 1987-31 March 1989.** Kersley, L.; Pryse, S.E.; Russell, C.D. University Coll. of Wales, Aberystwyth (UK). Dept. of Physics. 31 Mar 1989. 39p. Grant AFOSR-87-0378. Source: NTIS, PC A03/MF A01.

Intensity and phase scintillation has been studied by monitoring transmissions from NNSS satellites at Lerwick, a sub-auroral location in northern UK. Observations commenced in July 1987 and the first part of the present report concentrates on an analysis of scintillation occurrence morphology during the first ten months of the investigation. A discrete region of irregularities close to the boundary is implied from the observations while the absence of a significant geometrical enhancement about the geomagnetic field position suggests that the irregularities close to the boundary may have small axial ratios. The remainder of the report is concerned with a comparative study of the scintillation boundary for irregularities of sub-kilometer scale and the boundary of <30 m scale irregularities causing auroral backscatter of HF radar signals. In general the scintillation boundary was found to be some 7 to 8 deg polewards of that detected by the radar. In a reanalysis of the data a reconciliation could be made to get agreement in only about half of cases studied.

49856 (AD-A-222944/1/XAB) **Neutral and ion composition changes in the F Region over Millstone Hill during the equinox transition study.** Oliver, W.L. Boston Univ., MA (USA). 1 Apr 1990. 8p. Contract F49620-88-C-0111. Source: NTIS, PC A02/MF A01.

Pub. in Jnl. of Geophysical Research, Vol. 95, No. A4, 4129-4134(1 Apr 1990).

Overhead ionospheric incoherent scatter radar data from Millstone Hill is used to deduce the storm time variations of the thermospheric temperature, O and N2 densities, and F1 region ion composition during the Equinox Transition study of September 17-24, 1984. The measured neutral temperature profile and O density at 400 km altitude is extrapolated to determine O density changes in the lower thermosphere. Using these O densities and the measured electron densities, we deduce the variation of the N_2 density. Our initial attempt leads to the deduction of large depletions in both O and N_2 in the lower thermosphere. The radar-measured neutral temperatures were contaminated by ion-neutral frictional heating effects during the disturbed periods of the ETS and this served to invalidate neutral density extrapolations made with these temperatures. The height of 50% O+ ion composition in the F1 region and the height of the peak electron density in the ionosphere, are completed and compared. The height of the peak on the distributed days was located in the lower F1 region molecular-ion layer rather than in the F1 region O+ layer. This occurrance has serious consequences for methods of deducing neutral winds from the height of the F layer, for these methods rely on the peak containing primarily O+ ions.

49857 (AD-A-223198/3/XAB) **Pi 2 pulsations and the substorm current wedge: Low-latitude polarization.** Lester, M.; Singer, H.J.; Smits, D.P.; Hughes, W.J. Air Force Geophysics Lab., Hanscom AFB, MA (USA). 1 Dec 1989. 11p. (GL-TR-90-0144). Source: NTIS, PC A03/MF A01.

Pub. in Jnl. of Geophysical Research, Vol. 94, No. A12, 17,133-17,141(1 Dec 1989).

Mid-latitude observations of substorm-related Pi 2 waves have established a pattern in the orientation of the major axis of the polarization ellipse relative to the substorm current wedge. The purpose of this paper relate to the mid-latitude observations to those at lower latitudes. Pi 2 wave polarization parameters (ellipticity, sense of polarization, and the orientation of the major axis, or azimuth, of the horizontal wave ellipse) were measured at the two southern stations of the AFGL Magnetometer Network located at 40 deg N magnetic latitude. For the same events the H and D component bays at the five northern stations of the AFGL network located at 55 deg N were used to locate the position of the substorm current wedge. Then the ellipticity and the azimuth of the waves were examined with respect to the current wedge. Inside the current wedge the longitudinal pattern of the polarization azimuth of the low-latitude (40 deg N) stations agrees with the observed mid-latitude (55 deg N) azimuth pattern without exception. However, outside the wedge near the longitudes of the field-aligned currents, the azimuth does not change at low latitudes as it does at 55 deg N. The difference between the mid- and low-latitude observations can be partially explained by the additional observation of positive H component bays at the low-latitude stations, which suggests that the ground-based signature of the current wedge increases in longitudinal extent with decreasing latitude. With regard to sense of polarization, inside and east of the wedge the sense is predominantly counterclockwise, just as it is at mid latitudes.

49858 (AD-A-223229/6/XAB) **Electrodynamics of the high-latitude ionosphere. Final report, September 1986-September 1989.** Heelis, R.A. Texas Univ., Richardson, TX (USA). Center for Space Sciences. Feb 1990. 33p. Contract F19628-86-K-0042. Source: NTIS, PC A03/MF A01.

Both large and small scale structure in the plasma density and velocity are important phenomena to be understood in the ionosphere. The ability to characterize the high-latitude plasma motion over large spatial scales is demonstrated here with the development of a model that can be driven by data inputs. The model can also be used to study the mechanisms producing large scale structures in the plasma. The applicability of the model is demonstrated for periods when the interplanetary magnetic field has a southward component. During periods of northward IMF the electrodynamics of the ionosphere on spatial scales of 100 km must be understood. Here the combination of ground based and space based data are

invaluable tools. We show that mesoscale features may be coherent over many hours and constitute an important signature of the interaction of the Earth's magnetic field with the interplanetary medium.

49859 (PB–90-252404/XAB) **Distribution of the daily $F0F_2$ about the monthly median.** Sowers, M.W.; PoKempner, M. Department of Commerce, Boulder, CO (USA). Inst. for Telecommunication Sciences. May 1990. 192p. (NTIA–90-263). Source: NTIS, PC A09/MF A01.

Data from 21 ionospheric sounding stations in the northern and southern hemispheres were used to characterize the day-to-day variation in the critical frequency of the F2 layer of the ionosphere. Variability in the critical frequencies are analyzed monthly and diurnally for quiet magnetic conditions during both low and high solar periods. In addition, variations in the F2 layer critical frequency are presented for active magnetic conditions during equinox periods. Tables of variabilities for each ten degree increment in magnetic latitude are also provided in the report. The dependence of variations in the critical frequency with the solar cycle index IG12 is also discussed.

A revision of the method of molecular parameter scaling is made. Detailed discussion on the scaling of the nuclear and electron charges, the nuclear and electron masses and the real and complex scaling of the coordinates is performed. (A.C.A.S.).

49861 (CBPF-MO–001/89, pp. 61-85) **Bonding and interaction of molecules with surfaces.** Ellis, D.E. (Northwestern Univ., Evanston, IL (USA)). Centro Brasileiro de Pesquisas Fisicas (CBPF), Rio de Janeiro, RJ (Brazil). 1988. (CONF-8809499–: 6. Latin American School on Theoretical Chemistry, Rio de Janeiro (Brazil), 11-17 Sep 1988). In *6. Latin American School on Theoretical Chemistry. v. 1.* Source: Available from the Library of the Comissao Nacional de Energia Nuclear, RJ, Brazil.

In this lecture it is intended to discuss some general features of bonding and interaction of molecules with surfaces. The geometry of surface complexes is sufficiently difficult and the interaction mechanisms are sufficiently subtle. That all possible theoretical models need to be exploited such as: (i) Semiempirical - including Huckel molecular orbital theory; (ii) first principles including self-consistent-field Hartree-Fock and Local Density approaches; (iii) explicitly correlated, including C.I., Generalized Valence Bond, Coupled Cluster Perturbation Theory and Many Body Perturbation Theory. (A.C.A.S.).

49862 (CBPF-MO–001/89, pp. 193-197) **Hartree-Fock integral method.** Trsic, M. (Sao Paulo Univ., Sao Carlos, SP (Brazil). Dept. de Quimica e Fisica Molecular). Centro Brasileiro de Pesquisas Fisicas (CBPF), Rio de Janeiro, RJ (Brazil). 1988. (In Portuguese). (CONF-8809499–: 6. Electron impact spectroscopy at high energy, has been used to obtain the absolute generalized oscillator strength (GOS) for N_2 as a function of momentum transfer. Some rules of the GOS were employed to obtain the X-ray incoherent scattering factor, S(K) as a function of K. Comparison of the experiments with the results of a near Hartree-Fock molecular wave function calculation of S(K) revealed the effect of electron correlation on the compared quantity. (A.C.A.S.).

DOE Contract W-31109-ENG-38. From 200. American Chemical Society national meeting; Washington, DC (USA); 26-31 Aug 1990. Order Number DE90017680. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

During the last 40 years, the electronic structure of the actinide elements has been investigated in great detail primarily by means of spectroscopic studies of gaseous atoms and ions, as well as of solutions and compounds, and by magnetic susceptibility and electron spin resonance studies of metals, alloys, and compounds. Both experimental and theoretical studies have resulted in accurate values for spin orbit coupling and crystal field parameters for 5f electrons, for example, which can be compared with values characteristic of 4f electrons. The somewhat greater spatial extent of 5f versus 4f wavefunctions gives rise to 5f orbital participation in the bonding of actinide element organometallic compounds and leads to an extensive and intricate organometallic chemistry for this group of elements. This report reviews the history of the development of ideas concerning the electronic structure of the new elements which, by determining their chemistry, would fix their position in the Periodic Table.

49870 (CONF-900964–2) **Applications of diode lasers to resonance ionization mass spectrometry.** Young, J.P.; Shaw, R.W.; Smith, D.H. Oak Ridge National Lab., TN (USA). [1990]. 9p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 5. international symposium on resonance ionization spectroscopy and its applications; Ispra (Italy); 16-21 Sep 1990. Order Number DE90017768. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Diode lasers have been utilized in resonance ionization mass spectrometry (RIMS). These devices have been used to excite the first transition of several 1 + 1 + 1 multiple photon processes for both lanthanum 138 and 139. Enhanced isotopic selectivity resulted. Very-high resolution spectra were also obtained with the diode laser step to yield new atomic hyperfine structure constants for several levels of lanthanum. An isotopically selective RIMS instrument can be envisioned that used only diode lasers for optical excitation followed by a non-optical ionization step. 8 refs., 4 figs.

49871 (CONF-9009174–3) **Large collective lamb shifts in high pressure noble gases.** Payne, M.G.; Garrett, W.R.; Hart, R.C.; Datskou, I.; Wray, J. Oak Ridge National Lab., TN (USA). [1990]. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 5. international symposium on resonance ionization spectroscopy and its applications; Varese (Italy); 16-21 Sep 1990. Order Number DE90017761. Source: NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

When three-photon atomic excitation is produced by two laser beams of angular frequencies ω_{L1} and ω_{L2}, which are crossed at an angle θ, large cooperative pressure dependent shifts can be produced in the peak position of the excitation lineshape. By studying an experimental situation in xenon the theoretical predictions are shown to be in precise agreement with experiment for several angles and a wide range of pressures. The possibility of observing related shifts in nonlinear processes (such as backward stimulated hyper-Raman generation) is discussed. 14 refs., 2 figs.

49872 (CONF-9009174–4) **Collisional and electric-field ionization of laser-prepared Rydberg states in an ion trap mass spectrometer.** Ramsey, J.M.; Whitten, W.B.; Goeringer, D.E.; Buckley, B.T. Oak Ridge National Lab., TN (USA). [1990]. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 5. international symposium on resonance ionization spectroscopy and its applications; Varese (Italy); 16-21 Sep 1990. Order Number DE91000557. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Rydberg states of rubidium are selectively generated by one and two photon laser excitation in a quadrupole ion trap mass spectrometer. Collisional and electric-field ionization is investigated in trapping device. CCl_4 is studied as a target for ionization of Rydberg states through electron attachment.

This paper deals with the following topics: Review of Highly Ionized Atoms; Parametrized Systematizations of Spectroscopic Data; Transition Probability Computations; and Beam-foil Measurements.

49875 (IAE–4754-6) **Dissociative recombination of molecular ions H_2^+.** Abarenov, A.V.; Marchenko, V.S. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 13p. (In Russian). Order Number DE91600608. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The total cross sections of dissociation and dissociative recombination of slow electrons and molecular ions H_2^+ have been calculated in terms of the quasiclassical and dipole approximations. In the calculations allowance was made for the quantum nature of vibrational motion of heavy particles and presence of autoionization of divergence states of the $H_2(\Sigma_u, nl)$ molecules. It is shown that the H_2^+ ion dissociation cross sections are dominant in increase of the electron energy in the $\epsilon >$or approx. 2-3 eV region for $H_2^+(v)$ ion distribution over the vibrational levels characteristic for the beam experiments. 15 refs.; 5 figs.

49876 (IPPCZ–293/III, pp. 74-84) **A 40 keV neutral lithium beam source for tokamak CASTOR.** Zacek, F. (Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu); Stoeckel, J.; Jakubka, K.; Badalec, J.; Valovic, M.; Kolacek, K. Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak".* Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

A high-energy lithium atom source was developed at the IPP, Prague for active corpuscular diagnostics of the plasma in the Castor tokamak. The solid ion emitter, the extracting electrode system, the accelerating system, and the lithium beam neutralizer are described in detail. Results of experimental tests of the apparatus are reported. The emitter emission can reach a few hundreds of μA, the neutralizer efficiency being close to unity for the beam energy in the range of 5 to 20 keV. The maximum beam energy is 40 keV, its minimum diameter at a distance of 1 m from the gun is 10 to 15 mm. (J.U.).

49877 (JINR–2-35-89, pp. 15-20) **Relativistic corrections to energy levels of weakly bound states of mesic molecules ddμ and dtμ.** Bakalov, D.D.; Korobov, V.I. Joint Inst. for Nuclear Research, Dubna (USSR); Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation. 1989. (In Russian). In *JINR rapid communications: Collection.* Order Number DE90706214. Source: NTIS (US Sales Only), PC A04/MF A01; OSTI; INIS.

Relativistic shift and hyperfine splitting of the energy levels have been calculated with the account of the electromagnetic structure of the nuclei for weakly bound states (J=v=1) of mesic molecules

$dd\mu$ and $dt\mu$. There were used the obtained by variational method approximate wave functions which reproduce exact nonrelativistic energy level with no more error than 0.5 MeV. The performed results are necessary for the investigation of the mesic molecule formation processes arised in muon catalyzed fusion. 10 refs.; 4 tabs.

49878 (KEK–89-19, pp. 34-42) **Direct observation of hydrogen wave functions.** Ikeda, Susumu (National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan)). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Dec 1989. (CONF-8911202–: 2. workshop of Japan-UK collaboration on neutron scattering research, Tsukuba (Japan), 1 Nov 1989). In *Proceedings of the second workshop of Japan-UK collaboration on neutron scattering research.* Order Number DE90798861. Source: NTIS (US Sales Only), PC A07/MF A01.

The aim of this work is to observe the momentum transfer dependence of local vibrational mode intensities in metal hydrides, and to directly derive the hydrogen wave functions. In the case where the excitation energy is much greater than kT without any contribution of the host metal vibration, the inelastic neutron scattering intensity of the local modes of a powder sample, I(Q), is given by the transition probability from the initial state to the final state. The equation derived for I(Q) indicates that I(Q) is explicitly expressed in terms of the wave functions of the hydrogen. Therefore, measurements of I(Q) can provide the possibility of a direct investigation of the wave functions. At the beginning stage of the present approach, it is revealed that the momentum transfer dependence of the local modes observed by the neutron scattering spectrometer can be completely described by the above-mentioned equation. Investigation clearly shows that the wave functions for the first, second and third excited states in ZrH_2 are perfectly harmonic, and strongly suggests that the wave function can be directly examined based on measurements of I(Q). (N.K.).

49879 (KFTI–88-22) **Influence of the Ore slot on the positron energy distribution function.** Bolotov, V.N.; Novikov, V.E.; Tur, A.V.; Yanovskij, V.V. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1988. 6p. (In Russian). Order Number DE91600611. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

On the basis of Bolzmann kinetic equation a theory of positron subsystems in gases with positron sources and run off in energy space is developed. Nonequilibrium stationary function of positron distribution in gases which permits to calculate probability of positronium production in gases is derived. 5 refs.

49880 (LBL–26455, pp. 128) **Monte Carlo study of electron correlation functions for small molecules.** Sun, Z.; Reynolds, P.J.; Owen, R.K.; Lester, W.A. Jr. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

A study is made of electron-electron correlation functions for use in trial wave functions for small molecules. New forms are proposed that have only a few variational parameters, and these parameters have physical meanings that are easily discerned. Total energies for H_2, LiH, and Li_2 computed using these correlation functions are presented, and comparison is made with previous forms, including the Jastrow-Pade form often used in Monte Carlo studies. The authors further treat the possibility that correlation depends not only on the separation of a pair of electrons but also on the location of the electron pair relative to the nuclei - indicative of a density-dependent or many-body correlation effect. Their results indicate that such a many-body correlation effect is weakly present.

49881 (LBL–26455, pp. 128) **Electronic structure, hyperfine interactions, and magnetic properties for iron octahedral sulfides.** Braga, M.; Lie, S.K.; Taft, C.A.; Lester, W.A. Jr. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

Spin-polarized multiple-scattering calculations have been performed for FeS_6^{n-} (n = 8, 9, 10) clusters in order to study the electronic structure of the iron atom octahedrally coordinated to sulfur. The calculated total spin and charge densities together with the 3d and 4s atomic populations are used to interpret the Moessbauer hyperfine parameters. A detailed discussion of the hyperfine interaction and magnetic properties is given for the spinel greigite (Fe_3S_4). Possible existence of a Fe(IV) state in minerals containing only FeS is discussed, and it is concluded that it is highly unlikely.

49882 (LBL–26455, pp. 142-143) **Dynamics of endoergic substitution reactions: I. Br + chlorinated aromatic compounds.** Robinson, G.N.; Continetti, R.E.; Lee, Y.T. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

The endoergic substitution reactions Br + R-Cl → Cl + R-Br (R = o-, m-, and p-$CH_3C_6H_4$, C_6H_5, C_6F_5; $\Delta H^\circ \simeq 15$ kcal/mol) have been studied using the crossed-molecular-beams method in the collision energy (E_c) range 20-35 kcal/mol. The $CH_3C_6H_4Br$ and C_6F_5Br products were found to be mostly forward scattered with respect to the incident Br beam, indicating that the lifetimes of the Br-R-Cl collision complexes are short compared to their rotational periods. The product translational-energy distributions and excitation functions for these reactions are well reproduced by statistical calculations that assume only a few vibrational modes in the collision complexes particulate in intramolecular energy redistribution prior to Cl elimination. Ring substituents are found to affect both the extent of energy redistribution in the complexes and the probability of Br addition. For example, no substitution product was observed with m-$CH_3C_6H_4Cl$ or C_6H_5Cl. The relative magnitudes of the cross sections are explained in terms of possible features of the potential-energy surfaces along their reaction coordinates.

49883 (LBL–26455, pp. 143) **Dynamics of endoergic substitution reactions. II. Br + (CH_2CCl_2) → Cl + (CH_2CClBr).** Robinson, G.N.; Continetti, R.E.; Lee, Y.T. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

The authors have extended crossed-beams studies to the reactions of Br atoms with 1,1- and trans-dichloroethylene. The slopes of the product translational-energy distributions and excitation functions for both reactions support their previous conclusion that Cl elimination from Br-R-Cl collision complexes can compete with Br elimination only in the limit that few vibrational modes of the complex are active in energy redistribution. The substitution cross section for the Br + CH_2CCl_2 reaction is considerably lower than that for the Br + trans-CHClCHCl reaction in the collision-energy range 15-25 kcal/mol, suggesting that steric effects play a dominant role in determining the relative magnitudes of the cross sections.

49884 (LBL–26455, pp. 143) **Crossed-molecular-beam studies of the reactions of methyl radicals with iodoalkanes.** Robinson, G.N.; Nathanson, G.A.; Continetti, R.E.; Lee, Y.T. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

The I-atom exchange reactions, $CH_3RI \rightarrow CH_3I + R$ [R = CF_3, $(CH_3)_3C$], were investigated at a collision energy of ≈ 13 kcal/mol using the crossed-molecular-beams technique. The supersonic beam of methyl radicals was formed by pyrolyzing a mixture of ≈ 1% di-tert-butyl peroxide in helium in a quartz nozzle. A large fraction of the total energy available to the products from these reactions is channeled into relative translation [≈ 50% for R = $(CH_3)_3C$ and ≈ 70% for R = CF_3], suggesting that the dominant interaction among the products is repulsive. The CH_3I product from both reactions was observed to be entirely backward scattered with respect to the incident radical beam, indicating that a roughly collinear C-I-C transition-state geometry is favored. The present results are compared to those of earlier crossed-beam studies of the $CH_3 + IY \rightarrow CH_3I + Y$(Y = Cl, Br, I) reactions; the differences observed among these reactions are explained with reference to the CH_3I-Y and CH_3I-R interaction potentials.

49885 (LBL–26455, pp. 143) **Polarization effects in reactive scattering of Na atoms in the 4D level.** Weiss, P.S.; Covinsky, M.H.; Schmidt, H.; Balko, B.A.; Lee, Y.T.; Mestdagh, J.M. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and*

Chemical Sciences Division annual report, 1988. Order Number DE90003301. Source: NTIS, PC A11/MF A01.

Experiments performed using a crossed-beam apparatus have shown that the reactivity of Na(4D) with HCl and O_2 changes substantially as the 4d orbital alignment is varied. This change is different for the two reactions. The favorable alignment for the reaction with HCl has the d orbital aligned along the relative-velocity vector of the reactants. This result is consistent with a long-range electron transfer initiating the reaction and suggests that the Na-Cl axis dominates over the H-Cl axis in determining the favorable atomic orbital alignment. For the reaction with O_{d2}, the NaO formation has a high translational-energy threshold, and the favored orbital alignment varies as a function of the NaO laboratory scattering angle. Very restricted conditions are found to be necessary for the reaction: near-collinear geometry and the d orbital perpendicular to the molecular axis.

49886 (LBL–26455, pp. 143-144) **Ultrahigh-resolution (1+1) photoionization spectroscopy of KrI: Hyperfine structures, isotope shifts, and lifetimes for the n = 5,6,7 4^5ns Rydberg levels.** Trickl, T.; Vrakking, M.J.J.; Cromwell, E.; Lee, Y.T.; Kung, A.H. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

High-resolution measurements of the hyperfine structures and isotope shifts are reported for KrI n = 5,6,7 $4p^5$ns Rydberg levels, obtained using a soft x-ray and extreme ultraviolet (XUV) laser with a bandwidth of 210 MHz in a resonant two-photon-ionization scheme. Use of known I_2 frequencies yields an improved absolute calibration of the Kr energy levels by more than one order of magnitude. The nuclear-quadrupole hyperfine structure indicates that the $4p^56s$ and $4p^57s$ states are described by a pure jj-coupling scheme, whereas the $4p^55s$ states depart from a pure jj-coupling scheme by 0.37(6) %. The magnetic hyperfine structures shows that the $4p^5$ns states are mixed with $4p^5$n'd states. The isotope shifts can be described as pure mass effects within the precision of their experiment. For the $4p^56s$ and $4p^57s$ states, lifetimes were determined that differ markedly from theoretical literature values.

49887 (LBL–26455, pp. 147) **High-energy atomic physics.** Gould, H. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

The goal of this program is to understand atomic collisions of relativistic ions and to test quantum electrodynamics (QED) in very high atomic-number atoms. These are new areas of research that involve physics that is not accessible at lower energies or with ions of lower atomic number. This research is conducted at the Lawrence Berkeley Laboratory's Bevalac, the world's only relativistic heavy-ion accelerator. Recent results include the first measurement of electron-impact ionization of highly ionized very heavy ions (U^{88+}, U^{89+}, U^{90+}, and U^{91+}). This measurement was done by channeling relativistic uranium ions through Si single crystals. These and earlier experiments in this program have led to an understanding of relativistic heavy-ion-atom collisions, which in most cases is now more complete than for nonrelativistic collisions. Present activities include a precision (0.1%) measurement of the Lamb shift in uranium. Future experiments will attempt to observe a new capture mechanism - electron capture from the production of electron-positron pairs by the motion Coulomb fields of relativistic nuclei passing within atomic distances of each other.

49888 (LBL–26455, pp. 149) **Atomic physics.** Prior, M.H. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

This program conducts experimental studies of atomic structure and collisional interactions in atomic systems or projectile-target combinations that have unique properties. At present, emphasis is on the study of highly charged ions, their energy-level structure, and their behavior in low-energy collisions with atomic targets. Among the broad range of possible research topics, those are selected that are best addressed by the unique facilities and expertise at LBL and that have impact as strong tests of atomic of collision theory. Often, topics studied have relevance to plasma diagnostics in tokamak devices, or to advanced laser technology. Collaborative efforts with investigators from outside LBL form a part of this program activity when they are consistent with research goals. Presently, efforts are under way that yield metastable energy-level structures of highly charged ions, reveal details of multiple electron-transfer processes, and reveal Auger electron and x-ray emission spectra from ion-atom collisions.

49889 (LBL–26455, pp. 149-150) **Double and single electron capture in slow collisions of $Ar^{9,8+}$ ions with He atoms.** Hutton, R.; Prior, M.H.; Chantrenne, S.; Chen, M.H.; Schneider, D. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

The process of double electron capture in a single collision between a slow, highly charged ion and an atomic target is the subject of a great deal of current interest, both theoretically and experimentally. This work report experimental studies with F-like (9-electron) Ar^{9+} ions, which provide evidence of a double-capture process similar to those observed with He-like projectiles. These experiments were performed using ion beams produced by the LBL electron cyclotron resonance (ECR) ion source and the associated atomic physics beamline facilities. The method uses the technique of zero-degree (forward direction) electron spectroscopy, incorporating two electron spectrometers in tandem. In this work they observed Auger lines using both Ar^{8+} and Ar^{9+} projectiles. Ar^{8+} is a Ne-like ion with a $2p^6\ ^1S_0$ ground state, and neither single nor double electron capture has much probability, at these collision energies, of producing states with Auger decay channels. Ar^{9+} is F-like (9 electrons) with a $2p^5\ ^2P$ ground configuration; single electron capture will produce a Ne-like singly excited system and consequently no auger electrons. Two-electron capture can produce Na-like core-excited states with configurations of the form $2p^5nln'l'\ ^2L$ and ^4L.

49890 (LBL–26455, pp. 150-151) **Work in progress.** Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

The study of Auger electron spectra from Na-like highly charged ions excited by double-electron-capture collisions is systematically being extended using F-like ion beams ranging from Si^{5+} to Cu^{20+}. This will yield an isoelectronic comparison of production and spectral features useful in understanding the role of dynamic correlation, possible spin reorientation in double-capture processes, and metastable level energies. To gain further insight into the correlated double-capture process, an experiment has been mounted to measure electron spectra in coincidence with the projectile final charge state, to determine the extent of capture into the super nonequivalent states consisting of one electron in a bound state of the projectile and one in the continuum moving with the projectile. Preliminary observations indicate that nearly all the electrons captured to the continuum of the projectile (that is, unbound, but nearly at rest in the projectile frame) are associated with a projectile final charge state reduced by one unit. A detailed study of the scattering of Ne^{9+} (H-like) projectiles from Ne atoms, which identifies the final charge state of the target and projectile, is undergoing final analysis. This study shows details of the multielectron transfer process in slow (90 keV), highly charged ion-atom collisions, and reveals oscillatory structure in the scattering probability vs angle (or impact parameter) for certain final-charge-state combinations.

49891 (PB–90-244591/XAB) **Updated excitation and ionization cross sections for electron impact on atomic oxygen. Quarterly report.** Laher, R.P.; Gilmore, F.R. R and D Associates, Marina del Rey, CA (USA). ©1990. 29p. Contract DNA-001-85-C-0022. Source: NTIS(Order as PB90-244526).

Included in Jnl. of Physical and Chemical Reference Data, Vol. 19, No. 1, 277-304(1990). Available from American Chemical Society, 1155 16th St., NW, Washington, DC 20036.

Cross sections for the excitation and ionization of atomic oxygen by electron impact are presented as the result of a critical review of experimental and theoretical work on this subject. An effort has been made to compile the most accurate and complete set of cross sections available. More than 60 profiles of excitation cross section versus electron-impact energy are presented. These include transitions to the forbidden metastable O(2p(4) singlet D) and O(2p(4)

singlet s) states, the allowed autoionizing O(2p(5) triplet p(0)) state, nine allowed Rydberg series, and twenty-nine forbidden Rydberg series. Recommended ionization cross sections for transitions to the various outer-electron ionization states to the inner-electron ionization state O(1+) quartet p, and to the O(2+) state are also given. The data presented in the report will be useful in calculations of aeronomical and artificially-induced electron impact on atomic oxygen, an important component of the upper atmosphere.

49892 (SAND–90-1676C) **Light-heavy-hole-mixing-induced selection rules for magneto-luminescence and valence-band energy dispersion in semiconductor quantum wells.** Lyo, S.K.; Jones, E.D. Sandia National Labs., Albuquerque, NM (USA). [1990]. 5p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-901105–6: Fall meeting of the Materials Research Society, Boston, MA (USA), 26 Nov - 1 dec 1990). Order Number DE90015989. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The validity of the semiclassical approximation for the valence band structure of a QW (quantum well) was studied in a perpendicular magnetic field. The relative oscillator strengths of the main and forbidden transitions for magneto-luminescence were calculated for n-type quantum wells. 6 refs., 3 figs.

49893 (SAND–90-2317C) **Stochastic electron beams in the ion-focused regime.** O'Brien, K.J.; Freeman, J.R. Sandia National Labs., Albuquerque, NM (USA). [1990]. 3p. Sponsored by U.S. Department of Defense. DOE Contract AC04-76DP00789. (CONF-9009200–9: 1990 LINAC conference, Albuquerque, NM (USA), 10-14 Sep 1990). Order Number DE90017033. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The ion-hose instability can catastrophically disrupt a classical electron beam propagating in the ion-focussed regime (IFR). Ion hose is driven by a resonant interaction between the smooth electron-betatron and ion-betatron orbits. In a classical beam phase correlations decay secularly in time $c(t)/c(t_0) \sim (t_0/t)^n$ $(0 < n < 2)$. In a stochastic electron beam the electron orbits are chaotic. Such a beam can be immune to resonant instabilities because phase correlations decay exponentially fast $c(t)/c(0) \sim e^{-ht}$ thus destroying the coherence of the electron response on the growth time $1/\gamma_g$ if $h \sim \gamma_g$. Using the same principles we can also envision a stochastic damping cell in which electron phase correlations damp exponentially $c(z)/c(0) \sim e^{-hz}$ thus centering and conditioning a beam more effectively than a classical phase-mixing cell in which $c(z)/c(z_0) \sim (z_0/z)^n$. A "triple-Bennett" IFR system and the analogous "triple-wire" damping cell are analyzed. The K-entrophy is introduced as a figure-of-merit for such stochastic electron beam systems. 16 refs., 7 figs.

49894 (TRI-PP–90-22) **Capture and transfer of pions in hydrogenous materials.** Armstrong, D.S. (Virginia Polytechnic Inst. and State Univ., Blacksburg, VA (USA)). British Columbia Univ., Vancouver, BC (Canada). TRIUMF Facility. May 1990. 19p. (CONF-9005273–1: International workshop on exotic atoms in condensed matter, Erice (Italy), 19-25 May 1990). Order Number DE90017756. Source: NTIS (US Sales Only), PC A02/MF A01 - OSTI.

Pionic hydrogen is a short-lived exotic hydrogen isotope in which a negative pion replaces the atomic electron. The formation and subsequent interactions of pionic hydrogen are discussed, with emphasis on the process of pion transfer. Recent results using the pion charge-exchange reaction (π^{minus},π^0) obtained at TRIUMF are reviewed. 35 refs., 9 figs., 3 tabs.

49895 (UCRL-JC–104665) **Atomic physics of highly charged ions in an electron beam ion trap.** Marrs, R.E. Lawrence Livermore National Lab., CA (USA). Jul 1990. 15p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-900716–1: 12. international conference on atomic physics, Ann Arbor, MI (USA), 30 Jul - 3 aug 1990). Order Number DE90017528. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Two electron beam ion traps are in use at LLNL for the purpose of studying the properties of very highly charged ions and their interactions with electrons. This paper reviews the operation of the traps and discusses recent experiments in three areas: precision transition energy measurements in the limit of very high ion charge, dielectronic recombination measurements for the He-like isoelectronic sequence, and measurements of x-ray polarization. 22 refs., 11 figs., 1 tab.

49896 (DOE/OR/00033–T444) **Magnetohydrodynamic modification of the TEACH-T code and the prediction of the maximum azimuthal velocity in a conducting fluid.** Willis, M.G. Pennsylvania State Univ., University Park, PA (USA). Graduate School. Dec 1989. 80p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC05-76OR00033. Order Number DE90017510. Source: NTIS, PC A05/MF A01 - OSTI; GPO Dep.

An extension of the two dimensional turbulent fluid dynamics code, TEACH, is developed. This extension incorporates a third (azimuthal) velocity component, with azimuthal symmetry assumed. Also included is the ability to solve for an electrostatic potential field with given boundary conditions. This electrostatic potential yields an electric field which, when coupled with the included constant magnetic field, produces Lorentz forces. These are accounted for as body forces in the appropriate components of the Navier-Stokes' momentum equation. The extensions in the code are compared with analytic results where possible and are found to be highly accurate. Finally, a semi-empirical correlation is developed to predict the magnitude and position of the maximum value of the added velocity component give the magnetic field strength and the value of the potential difference between an assumed central electrode and grounded outer shell. The correlation is seen to give excellent results for a wide range of electrostatic potential boundary conditions and magnetic field strengths acting on the working fluid sodium.

49897 (IAE–4833-2) **Vacuum polarization of electromagnetic field and electrodynamic processes on nucleus.** Tkalya, E.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 19p. (In Russian). Order Number DE91601023. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The influence of vacuum polarization of electromagnetic field caused by conducting boundaries on electrodynamic processes, described by two-order diagrams with virtual photon-internal electronic conversion, inelastic electron scattering and others - was analysed. It was found that the probability of such processes could be changed significantly. It is suggested that this phenomenon can be used for creation of inversion population in Moessbauer transition and for investigation metal surfaces. 29 refs.; 7 figs.

49898 (LA-UR–90-2638) **Transport, mixing and stretching in a chaotic Stokes flow: The two-roll mill.** Kaper, T.J. (California Inst. of Tech., Pasadena, CA (USA)); Wiggins, S. Los Alamos National Lab., NM (USA). [1989]. 16p. Sponsored by U.S. DOE Office of Administration and Human Resource Management. DOE Contract W-7405-ENG-48. (CONF-890794–2: 3. American Society of Civil Engineers/American Society of Mechanical Engineers mechanics conference, San Diego, CA (USA), 9-12 Jul 1989). Order Number DE90016718. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

We present the outline and preliminary results of an analytical and numerical study of transport, mixing, and stretching in a chaotic Stokes' flow in a two-roll mill apparatus. We use the theory of dynamical systems to describe the rich behavior and structure exhibited by these flows. The main features are the homoclinic tangle which functions as the backbone of the chaotic mixing region, the Smale horseshoe, and the island chains. We then use our detailed knowledge of these structures to develop a theory of transport and stretching of fluid in the chaotic regime. In particular, we show how a specific set of tools for adiabatic chaos- the adiabatic Melnikov function lobe area and flux computations and the adiabatic switching method is ideally suited to develop this theory of transport, mixing and stretching in time-dependent two-dimensional Stokes' flows. 19 refs., 8 figs.

A measurement of the Lamb shift in lithiumlike uranium (U^{89+}) is in progress. The experiment uses a Doppler-tuned spectrometer (DTS) to measure the $2p_{1/2}$-$2s_{1/2}$ transition energy in lithiumlike uranium. The Lamb shift is about 75 eV out of a transition energy of about 280 eV. A prototype DTS was successfully tested using boron ions at the SuperHILAC. Six detectors for the Bevalac DTS were built and tested. The complete Doppler-tuned UV spectrometer, consisting of the six detectors, precision collimating slits, gas-absorber cells, target transporter, alignment apparatus, an electromagnetic for suppressing scattered electrons, scintillators for charged-particle vetos (protons from nuclear disintegrations), beam-position detectors, etc., was assembled in a 6-foot-diameter vacuum chamber, tested, and installed in the B40 cave at the Bevalac. Two 10-inch-diameter diffusion pumps were placed on the chamber to maintain vacuum against the diffusion of gas through the 4-μm-thick detector windows. (Very thin windows are necessary to transmit the low-energy x rays).

49903 (CEA-CONF–9959) **Production of light mesons in P + D reactions.** Boudard, A. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Nucleaire a Moyenne Energie. 1989. 10p. (CONF-8907127–: 12. International Conference on Few Body Problems in Physics, Vancouver (Canada), 2-8 Jul 1989). Order Number DE91702096. Source: NTIS (US Sales Only), PC A02/MF A01.

Recent progress in our understanding of pd + ^{3}Heπ^0 up to 2.5 GeV is reviewed. The main contributions are known but the calculations do not reproduce details of the observables even in the Δ peak. The experimental data on neutral meson production at threshold up to the Φ (1020) is discussed. The measured high counting rate of η's provides a nice opportunity to study rare and forbidden η decays by the easy ^{3}He tagging.

49904 (CEA-CONF–10040) **Deuteron A(Q^2) structure function and the neutron electric form factor.** Platchkov, S. (and others); Amroun, A.; Auffret, S.; Cavedon, J.M.; Dreux, P.; Duclos, J.; Frois, B.; Goutte, D.; Hachemi, H.; Martino, J.; Sick, I. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Nucleaire a Haute Energie. 1989. 6p. (CONF-8907127–: 12. international few body conference: few body problems in physics, Vancouver (Canada), 2-8 Jul 1989). Order Number DE91700504. Source: NTIS (US Sales Only), PC A02/MF A01.

We present new measurements of the deuteron A(Q^2) structure function in the momentum transfer region between 1 and 18 fm^{-2}. The accuracy of the data ranges from 2% to 6%. We investigate the sensitivity of A(Q^2) to the nucleon-nucleon interaction and to the neutron electric form factor G_E^n. Our analysis shows that below 20 fm^{-2} G_E^n can be inferred from these data with a significantly improved accuracy. The model dependence of this analysis is discussed.

49905 (CONF-900822–9) **Measurement of the $e^+e^- \rightarrow b\bar{b}$ cross section and forward-backward charge asymmetry at a center-of-mass energy of 57.2 GeV.** The AMY Collaboration. Louisiana State Univ., Baton Rouge, LA (USA). [1990]. 20p. Sponsored by Academia Sinicia of the People's Republic of China; U.S. DOE Energy Research; Japan Ministry of Education, Science and Culture; Korea Science and Engineering Foundation; National Science Foundation. DOE Contract AS05-77ER05490. From 25. IUPAP international conference on high energy physics; Singapore (Singapore); 2-8 Aug 1990. Order Number DE90017404. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Measurements of the $e^+e^- \rightarrow b\bar{b}$ forward-backward charge asymmetry, A_b, and the ratio of the cross-section for $e^+e^- \rightarrow b\bar{b}$ to the theoretical QED cross-section for $e^+e^- \rightarrow \mu^+\mu^-$, R_b, at an average center-of-mass energy of 57.2 GeV are reported. We use 196 multihadronic inclusive muon events corresponding to an integrated luminosity of 33.3 pb^{-1} accumulated by the AMY detector at TRISTAN. The results, $A_b = -0.82 \pm 0.25(\text{stat}) \pm 0.14(\text{syst})$ and $R_b = 0.47 \pm 0.12 \pm 0.10$ are consistent with the standard model predictions of -0.58 and 0.56, respectively. The results for the charge asymmetry are used to set a 90% confidence level limit on χ, the $B^0 - \bar{B}^0$ mixing parameter, of $\chi < 0.20$. 15 refs., 5 figs.

49906 (FRCEA-TH–283) **Pion electroproduction near threshold on protons: how reaching the axial form factor of nucleon. Preparatory study of the experiment and pion spectrometer realization.** Estenne, V. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Nucleaire a Haute Energie; Lyon-1 Univ., 69 (France). 1988. 176p. (In French). Order Number DE91702090. Source: NTIS (US Sales Only), PC A09/MF A01.

This work aims to show the feasibility of a pion electroproduction experiment e+ p $\rightarrow$ e' π^+ n near the threshold on the protons of a liquid hydrogen target, by detecting in coincidence the outgoing pion and the scattered electron. This experiment is a collaboration between four laboratories (Clermont-LPC, Lyon-IPN, Orsay-IPN, Saclay-DphN/HE). Differential cross-sections will be measured in the threshold vicinity, following a double purpose: - Performing at the threshold, thanks to a justified extrapolation of the measured cross-sections, a transverse-longitudinal separation of the extrapolated term, in order to get separately both s-wave multipoles: their ratio will help to test theoretical models. - Reaching, through the transverse multipole, the nucleon axial form factor, with quadritransfers form 2 up to 5 fm^{-2}. We review how chiral symmetry and

currents algebra connect these two parameters. The building of a large solid angle, low energy pion spectrometer was necessary. Besides a complete description of the experimental set-up, we presents here for this non-parallel plane poles magnet a field modelisation,, whose results are compared with field values measured in the magnet symmetry plane. Installed at the Saclay Linear Accelerator, the apparatus operated satisfactorily during the first runs with the beam.

49907 (FSU-HEP–881011) **Searching for 100–300 GeV gluinos at the Tevatron and SSC.** Baer, H. (Florida State Univ., Tallahassee, FL (USA). Dept. of Physics); Tata, X.; Woodside, J. Florida State Univ., Tallahassee, FL (USA). [1988]. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-87ER40319. (CONF-8806243–48: DPF summer study: Snowmass '88: high energy physics in the 1990s, Snowmass, CO (USA), 27 Jun - 15 jul 1988). Order Number DE90017449. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

We examine event topologies from gluino pair production at various Tevatron upgrades, including the complete cascade decay of each gluino as given by the minimal supergravity model. We give expected rates for signal and background for 0 and 2 lepton(s) + n jet(s) + p_t events. We also examine whether the process of $pp \to \tilde{g}$ + LSP yields an observable p_t signature at the SSC, and conclude that it does only when $m_{\tilde{g}} \simeq m_{\tilde{g}} \lesssim 300$ GeV.

49908 (FSU-HEP–890130) **The search for very heavy top and the fourth generation.** Baer, H. Florida State Univ., Tallahassee, FL (USA). High Energy Physics Lab. Jan 1989. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-87ER40319. (CONF-8811175–7: Beyond the standard model, Ames, IA (USA), 18-22 Nov 1988). Order Number DE90017318. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

We examine prospects for detecting top quarks at hadron colliders if $m_t > M_W$. We find the top quark to be detectable above backgrounds for the entire theoretically allowed mass range of m_t, by looking at dilepton plus ≥ 2 jet events at the Tevatron $p\bar{p}$ collider. The top should also be seeable in single lepton events up to $m_t \simeq 180$ GeV, with a reconstructable mass. Prospects for detecting a fourth generation of fermions at the SSC are also discussed. 20 refs., 6 figs., 2 tabs.

49909 (HEPI–88-17) **Observation of the Dirac magnetic charges by virtue of a diffusion chamber.** Mikhajlov, V.F. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. 12p. Order Number DE91601103. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The beahviour of water drops, being condensated in ferromagnetic particles of a submicron size, in a magnetic field, in a light beam, suspended in gas atmosphere. A large number of objects observed has a magnetic charge, which value coincides with a charge of the Dirac monofield.

49910 (IFVE-OEF–89-95) **Study on the $\pi^+ \to \eta$ and $\pi^+ \to \pi^0\pi^0$ exclusive processes on nuclei at 10.5 GeV/c.** Akimenko, S.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij); Belousov, V.I.; Artykov, A.M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 13p. (In Russian). Order Number DE91601108. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The charge exchange reactions $\pi^+ \to \eta$ and $\pi^+ \to \pi^0\pi^0$ were studied at 10.5 GeV/c with Be,Cu and Pb nuclei. The lead glass shower hodoscope was used to detect π^0- and η-mesons decaying as $\pi^0(\eta) \to 2\gamma$. The total and differential cross sections measured are compared with colour screening QCD-model, with Glauber theory calculations and with data at other energies. 13 refs.; 9 figs.; 1 tab.

49911 (IFVE-OTF–89-88) **Perspectives of experimental study of electromagnetic form factors of unstable particles at UNK.** Gershtejn, S.S.; Dzhikiya, G.V.; Likhoded, A.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 20p. (In Russian). Order Number DE91601104. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

To determine the main directions of the experimental explorations on the accelerators with a fixed target and the energy of the order of TeV possibilities of study of the pion and hyperon form-factors are discussed. The way of the investigations of effects of the SU(6)-symmetry breakdown in the electroproduction of baryon resonances is detected. Numerical estimations for the discussed problems were made for UNK IHEP energies. 15 refs.

49912 (IS-T–1488) **Measurement of α_s from energy-energy correlations in e^+e^- annihilation at 29 GeV.** Hsiao-Ying, Chao. Ames Lab., IA (USA). ©4 Sep 1990. 82p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-82. Source: Iowa State University, Ames, IA 50011.

We have studied the energy-energy correlation in e^+e^- annihilation into hadrons at $\sqrt{s}$ = 29 GeV using the TPC/2γ Detector Facility at PEP. We found that $\alpha_s = 0.161 \pm .004 \pm .011$ for the average hadronic event sample using GKS matrix elements and LUND symmetric string fragmentation. 39 refs., 22 figs.

49913 (KEK–89-17, pp. 61-69) **Measurement of V_{ub}.** Sumiyoshi, Takayuki (National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan)). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Nov 1989. (In Japanese). (CONF-8910393–: Workshop for asymmetric B-factory at KEK, Tsukuba (Japan), 2-4 Oct 1989). In *Proceedings of the workshop on asymmetric B factory at KEK.* Order Number DE90777869. Source: NTIS (US Sales Only), PC A12/MF A01.

V_{ub} is an element of the Kobayashi-Maskawa matrix which correlates the mass-specific state in the quark sector and the specific state of weak interaction. It represents the strength of the connection between the b quark and u quark. V_{ub} would not be zero if the CP violation can be expressed by the Kobayashi-Maskawa matrix. Measurement of V_{ub} is a major subject of experiments at B factories. V_{ub} may be determined from observation of the lepton's momentum distribution, non-leptonic decay and semi-leptonic decay. The present report focuses on Monte Carlo simulation to examine the feasibility of V_{ub} determination from the $B \to \pi 1\nu$ decay. It is assumed that the $B \to \pi 1\nu$ event involves e or μ leptons whose direction is 10deg or more from the beam axis, whose momentum perpendicular to the beam axis is 0.1 GeV/c or more, and whose momentum in a static B^0 meson system is between 2.3-2.7 GeV/c. The π meson is assumed to have an electric charge different from that of the e or μ lepton, and to be 200 μm or less away from the e or μ lepton. Results of the simulation suggest that one year measurement of the $B^0 \to \pi 1\nu$ decay made by an asymmetric collider in the Υ (4s) region could determine the V_{ub} value. (N.K.).

49914 (KEK–89-17, pp. 70-91) **Measurement of Bs-Bs-bar mixing.** Kamitani, Takuya (National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan)). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Nov 1989. (In Japanese). (CONF-8910393–: Workshop for asymmetric B-factory at KEK, Tsukuba (Japan), 2-4 Oct 1989). In *Proceedings of the workshop on asymmetric B factory at KEK.* Order Number DE90777869. Source: NTIS (US Sales Only), PC A12/MF A01.

The study deals with a Monte Carlo simulation of Bs-Bs measurement through the collision of electrons and positrons having different energies. It also focuses on the feasibility of the determination of the mass difference parameter ($x_s = \Delta m_s/\Gamma$), and the optimization of the degree of asymmetry in the beam energies. If the mass difference parameter is 6.0 or so, it would be very likely that the value of the parameter can be determined from a sufficient number of events that correspond to one-year data. If the parameter is larger, the following three factors, which are affected by the degree of the asymmetry in collision energy, will be involved: a decrease in acceptance due to deformation of the angular distribution of particles toward the front, a decrease in resolution due to deformation of the angular distribution of particles toward the front and increased material passage, and an increase in time resolution due to an enhanced boost of B. Of these, the third factor has the greatest effect, indicating that a large asymmetry is desirable, though the other two factors can have a significant effect if the asymmetry is extremely large. (N.K.).

49915 (LAL–8935) **Study of neutrino oscillations in the frejus experiment.** Longuemare, C. (Caen Univ., 14 (FR). Lab. de

Physique Corpusculaire). Frejus Collaboration. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Oct 1989. 3p. (CONF-890903--: International Europhysics conference on high-energy physics, Madrid (Spain), 6-14 Sep 1989). Order Number DE91702100. Source: NTIS (US Sales Only), PC A02/MF A01.

The Frejus nucleon-decay detector has been operated between 19-02-1984 and 13-09-1988. The sample of atmospheric neutrino interactions recorded is compared with the predictions of a Monte Carlo simulation. A search for neutrino oscillations is performed. No evidence is found, and new limits on oscillations parameters are given at 95% CL.

49916 (LBL–26455, pp. 147-148) **Electron-impact ionization of U^{88+} - U^{91+}.** Claytor, N.; Feinberg, B.; Gould, H.; Bemis, C.E. Jr.; Gomez del Campo, J.; Ludemann, C.A.; Vane, C.R. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

The authors have made the first measurements of electron-impact ionization cross sections for very high charged ions. The authors did this by channeling 407-MeV/nucleon U^{92+}, U^{91+}, U^{90+}, U^{89+}, and U^{88+} (bare uranium through beryllium-like uranium) along the <110> axis of 0.11-mm-thick and 0.37-mm-thick Si single crystals. For channeled ions, they observe a large reduction in the probability for ionization and a reduction in the probability for electron capture. The authors are able to determine the fraction of incident ions that channel and the density of electrons along the path of the ions that channel. They use these determinations to interpret their ionization data to yield cross sections for electron-impact ionization. Electron-impact cross sections were done for hydrogen-like-beryllium-like uranium by 220-keV electrons (the energy of the electrons seen in the rest frame of the 407-MeV/nucleon uranium). Their 1s and $2s^2$ results disagree with present theory. Our 2s and $2s^2$ results disagree with present theory. Their 2s and $2s^2$ results are not accurate enough to distinguish between theories.

49917 (ORNL/FTR–3732) **[Cross sections for lepton pair production and for capture of the pair-produced electrons to bound states of the fully-stripped projectiles]: Foreign trip report, July 18, 1990–August 31, 1990.** Dittner, P.F.; Krause, H.F.; Vane, C.R. Oak Ridge National Lab., TN (USA). 12 Sep 1990. 9p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE90017731. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The travelers spent approximately one month setting up, performing measurements, and then tearing down an experimental apparatus used to study various aspects of lepton pair production in collisions of 200-GeV/u sulfur ions with various targets. Results of the approximately ten days of beam-on-target measurement time are currently being evaluated. One traveler (HFK) learned about new theoretical investigations involving ion channeling in very thin crystals and its connections to catastrophe theory. The traveler discussed and began an investigation of a possible connection between the channeling rainbow and the channeling halo for very thin crystals.

Service de Physique Theorique. 1989. 13p. (CONF-8903243–: Contribution to the Meeting of Saturne Theoreticians on Heavy Meson Production and Strangeness in Nuclei, Saclay (France), 16-17 Mar 1989). Order Number DE91700506. Source: NTIS (US Sales Only), PC A03/MF A01.

To place the problem in perspective I will first discuss the decoupling of heavy quarks in QCD which is a simpler perturbative problem. Then, I will review two experimental observables (the σ-term in πN scattering and the polarised deep inelastic scattering) which diagnose the possibility of non-perturbative effects associated with the decoupling of the strange quark and will next discuss their possible interpretation on the basis of the skyrme model. I will also present some simple-minded results for a related low-energy application to the meson-nucleon scattering lengths obtained in a chiral effective lagrangian approach.

Three strange hadronic phenomena at low energy - the nucleon size problem, the strange quark content of the nucleon and the proton spin problem - are discussed in the context of manifestation of the Cheshire Cat Principle in hadronic systems. A simple resolution of these problems is provided by a chiral bag description combined with the topological notion of the baryon based on the skyrmion model. Absence of smoking-gun signals for quark-gluon presence in the nonperturbative sector of QCD is claimed to be a natural consequence of the Cheshire Cat Principle.

49922 (CEA-N–2624) **Generalized radiative corrections for hadronic targets.** Calan, C. de (Ecole Polytechnique, 91 - Palaiseau (FR). Centre de Physique Theorique); Navelet, H.; Picard, J. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Dept. de Physique Nucleaire. Feb 1990. 66p. (In French). Order Number DE91702073. Source: NTIS (US Sales Only), PC A04/MF A01.

Besides the radiative corrections theory at the order α^2 for reactions involving an arbitrary number of particles, this report gives the complete formula for the correction factor δ in $d\sigma = d\sigma_{Born}(1 + \delta)$. The only approximation made here - unavoidable in this formulation - is to assume that the Born amplitude can be factorized. This calculation is valid for spin zero bosons. In the 1/2 fermion case, an extra contribution appears which has been analytically computed using a minor approximation. Special care has been devoted to the 1/v divergence of the amplitude near thresholds.

49923 (CEA-N–2640) **Classical treatment of the Compton collision in general relativity.** Paillere, P. CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France). Mar 1990. 23p. Order Number DE91700488. Source: NTIS (US Sales Only), PC A03/MF A01.

With the help of a precise definition of the photon 4-momentum in Riemannian geometry, one can calcutate the emerging frequency and velocity in a Compton Collision in General Relativity.

49924 (DOE/ER/05490–112) **Color flux distribution in pure SU(2) Lattice Gauge Theory.** Haymaker, R.W. (Louisiana State

Univ., Baton Rouge, LA (USA). Dept. of Physics and Astronomy); Peng, Yingcai; Singh, V.; Wosiek, J. Louisiana State Univ., Baton Rouge, LA (USA). Dept. of Physics and Astronomy. [1990]. 3p. Sponsored by U.S. DOE Energy Research; Polish Agency of Nuclear Energy. DOE Contract AS05-77ER05490. Grant CPBP-01.09;Grant CPBP-01.03;Grant RRI-14. (CONF-9006267--3: 1990 DPF summer study on high energy physics, Snowmass, CO (USA), 25 Jun - 13 jul 1990). Order Number DE90017403. Source: NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

The color field distribution around a static $q\bar{q}$ pair is studied in detail for pure SU(2) Lattice Gauge Theory in four dimensions. As a result of large cancellations between electric and magnetic components, the action density dominates the energy density typically by an order of magnitude, at points far from the quarks.

49925 (IAE--4904-1) **Filamentation in quark plasma at finite temperatures.** Pokrovskij, Yu.E.; Selikhov, A.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 25p. (In Russian). Order Number DE91601048. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The initial (linear) stage of filamentary instability (the Weibel instability) which in the system of two-counter quark fluxes develops faster than others has been considered in terms of the non-Abelian Vlasov-Yang-Mills equations for quark plasma in a mean gluon field. A parametric method is proposed for the analytical solution of the dispersion equation at an arbitrary relationship between flux temperatures and quark masses. It is shown that the experimental exhibition of the Weibel instability can be applied to search for and study the initial highly-instable two-flux stage of production of quark-gluon plasma (QCP) in the central collisions of ions at E_{lab}=10-200 GeV/nucleon. 17 refs.; 7 figs.; 1 tab.

49926 (IFUSP-P--814) **Double beta decay, neutrino physics, nuclear structure and isospin and spin-isospin symmetries.** Krmpotic, F. (La Plata Univ. Nacional (Argentina). Dept. de Fisica). Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Dec 1989. 50p. Order Number DE91601028. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Prominent features of the double beta decay processes are reviewed. Emphasis is placed on the neutrino masses and the quasiparticle random phase approximation (GRPA). The suppression mechanism for the $\beta\beta$-decay transition rates, proposed by Vogel and Zirnbauer, is found to be closely related to the restoration of SU(4) symmetry. It is suggested that the extreme sensitivity of the $\beta\beta$-decay amplitude on the proton-neutron coupling is a consequence of the explicit violation of the SU(4) symmetry and therefore an artifact of the model. A prescription is given for fixing this interaction strength within the GRPA itself, which in this way acquires predicting power on both single and double β-decay lifetimes. (author).

49927 (IFVE-ONF--89-93) **On energy dependence of the width and shape of the rapidity distribution of negatively charged particles.** Uvarov, V.A.; Shlyapnikov, P.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 10p. (In Russian). Order Number DE91601049. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

Experimental data on the rapidity distribution of the negatively charged particles in the broad c.m.s. energy range from a few GeV to $\sqrt{s}$=900 GeV are analyzed. It is shown that the energy dependence of the width of the rapidity distribution in all available energy range can be described by a simple logarithmic function and that the distribution $(d6/dy)/(d6/dy)_{y=0}$ in the sufficiently large region of the central plateau can be represented as an energy independent function of y/Y, where $Y=\ln(\sqrt{s}/m)$ and m the parameter. 30 refs.; 3 figs.

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. 24p. Order Number DE91601050. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Submitted to TMF.

By the method of a single-time reduction of the Bethe-Salpeter formalism for two-fermion system, analytical expressions for the potentials of quark-quark and quark-antiquark interactions in QCD have been obtained in one-gluon exchange approximation. The asymptotic properties of quark-quark forces in configuration space have been studied. The dynamic equation for the wave function of meson as a quark-antiquark bound state has been derived in one-gluon exchange approximation. 18 refs.

49930 (IFVE-OTF--89-66) **Model of chromoelectric charges confinement.** Alekseev, A.I.; Arbuzov, B.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 8p. Order Number DE91601055. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

Submitted to Phys. Lett., B.

The problem of a consistent description of small and large distances in QCD is considered. For large distances the effective action for gluon field corresponds to the singular infrared asymptotics of a gluon propagator. Proceeding from the principle the static spherically-symmetric nonabelian solutions are constructed. They are model description of hadrons. The size of perturbative region and vacuum energy density are estimated. 11 refs.

49931 (IFVE-OTF--89-75) **Supersymmetric version of horizontal gauge interactions.** Amaglobeli, A.N. (AN Gruzinskoj SSR, Tbilisi (USSR). Tbilisskij Matematicheskij Inst.); Kereselidze, A.R.; Liparteliani, A.G.; Volkov, G.G. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 26p. Order Number DE91601056. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The supersymmetric version of the horizontal gauge model for 3 and 4 quark-lepton generations is considered. The possible contributions of horizontal interactions in classes of rare processes such as: oscillations $K^0\rightleftarrows K\text{-bar}^0$, $B_d^0\rightleftarrows B\text{-bar}_d^0$, $B_s^0\rightleftarrows B_s^0$, semileptonic processes (μ-e-conversion) and in the leptonic decays $\mu\rightarrow 3e$ and $\mu\rightarrow e\gamma$ are studied. Its shown that violations of local horizontal gauge symmetry of amplitude values of experimental restrictions of the above processes for some variants considered do not contradict the existence of light gauge bosons (m_H>or approx. 1-10 TeV) and calibrino (m_H>or approx. 0.2-0.5 TeV). 16 refs.

49932 (IFVE-OTF--89-87) **Massive straight-line string as a model of heavy quarkonium.** Batunin, A.V.; Zorin, O.L. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 19p. (In Russian). Order Number DE91601057. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Submitted to Nucl. Physics.

A system of two massive quarks connected with a straight-line relativistic string is investigated to be applied for heavy meson spectriscopy description. In terms of a vector string field the interaction vertices for charmonium excitations belonging to the triplet of the leading Regge trajectories are constructed. A constructional scheme for interaction proposed earlier for straight-line string with massless quarks is used. 9 refs.; 4 figs.

49933 (IFVE-OTF–89-110) **Excited quark production at ep and γp colliders.** Dzhikia, G.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 24p. Order Number DE91601051. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The production of excited quarks q* of spin j predicted by composite models at ep and γp colliders HERA, LEP-LHC and UNK-VLEPP has been studied. The production of excited quarks of spin j=1/2 at the γp collider based on the ep collider UNK-VLEPP is also considered. The effect of the longitudinal polarization of the electron beam is analyzed and the standard model background is estimated. It is shown that excited quarks with masses of the order of 1-2 TeV can be studied, and ep(γp) colliders have additional capabilities in exploring the structure of interactions of q* in comparison to hadron colliders. 21 refs.; 10 figs.; 2 tabs.

49934 (IFVE-OTF–89-111) **Strange meson mass spectrum in relativistic model for quasi-independent quarks.** Khrushchev, V.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 9p. Order Number DE91601052. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

In the framework of the quasi-independent quark model with the selection rules the mass formula for radially and orbitally excited states of light mesons with I=1/2 is proposed. The calculated mass values coincide with experimental ones within 6% accuracy. The mass formula may be used for the new meson experiment proposals. 35 refs.; 2 tabs.

49935 (IFVE-OTF–89-136) **Relativistic massive particle with higher curvatures as a model for description of bosons and fermions.** Plyushchaj, M.S. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 11p. Order Number DE91601025. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Submitted to Phys. Lett. B.

The model of a massive relativistic particle are proposed in which the world trajectory of the particle is supplied with a system of normals. In addition to the term, proportional to the length of the world trajectory, the action of these models includes some additional term, ΔA, depending in d=4 on higher curvatures of the trajectory. On the quantum level, the models describe states of an arbitrary fixed integer, or half-integer spin, according to the values of the quantized parameters in ΔA. 4 refs.

49936 (IFVE-OTF–89-140) **Numerical study of equation for gluonic cascade with recombination.** Batunin, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij); Belodedov, M.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 5p. Order Number DE91601053. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

Submitted to Yad. Fiz.

The equation for the generating function of gluon distribution in a cascade with recombination is numerically investigated at different initial numbers of gluons m and generation vertices. The solution to this equation is found to exponentially tend to steady-state one and the exponent is proportioal to both m and α. 3 refs.; 3 figs.

49937 (IFVE-OTF–89-144) **On mixing of states in relativistic-invariant theory.** Nekrasov, M.L. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 14p. (In Russian). Order Number DE91601054. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The status of the state-mixing model in relativistic-invariant theory is discussed. The viewpoint that this model is inapplicable for a deep study of the nature of neutral exotic mesons is reasoned. In relativistic-invariant model of composite interpolating operators it is shown that the state mixing matrix is not relativistic-invariant, depends on the properties of the expansion basis and does not possess the orthogonality property. The numeric estimates are presented for pseudoscalar η and η' mesons. 12 refs.

49938 (INS–819) **Extra weak bosons in a confining gauge theory with complementarity.** Yasue, Masaki. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Apr 1990. 25p. Order Number DE90520226. Source: NTIS (US Sales Only), PC A03/MF A01.

In composite models of weak bosons based on a confining gauge theory, extra weak bosons introduced as composites of scalar constituents are shown to exhibit kinetic mixing interactions describing the vector meson dominance of the photon and to disguise themselves as massive elementary gauge particles in accord with the notion of complementarity. Detailed discussions are presented for a $U(1)_{em}^{loc}$ model with a confined $SU(2)_L^{loc} \times G^{loc}$ gauge symmetry, where $G^{loc} = SU(2)_L^{loc} \times SU(2)_R^{loc}$, which is responsible for compositeness of quarks and leptons as well. Also discussed is complementarity in QCD for baryons and vector mesons. (author).

49939 (INS–821) **More sum rules for quark and lepton masses.** Terazawa, Hidezumi. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Apr 1990. 11p. Order Number DE90520260. Source: NTIS (US Sales Only), PC A03/MF A01.

Sum rules for quark and lepton masses are derived from the Ward identity of Chanowitz and Ellis for the vertex function of the trace of the energy-momentum tensor and the two axial-vector currents and the partially conserved axial-vector current hypothesis. They indicate, among other things, that the constituent quark masses of u and d and those of the techniquarks, if any, are about 300 MeV and 300 GeV, respectively. (author).

49940 (ITEP–121-88) **Analysis of the reaction p-barp→Λ-barΛ near the threshold.** Kudryavtsev, A.E.; Samojlov, V.M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1988. 12p. Order Number DE91601059. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Analysis of the p-barp→Λ-barΛ reaction is made in the nearthreshold energy region $E_{\Lambda-bar\Lambda} \approx$ 1-25 MeV. The observed anisotropy of the cross section is connected with strong suppression of S-waves due to absorption in the initial and final states. 8 refs.; 4 figs.

49941 (ITEP–131-88) **Quantum chromodynamics with infinite number of vector mesons.** Geshkenbejn, B.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1988. 21p. Order Number DE91601060. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Families of vector mesons Rho,Ψ,Υ, contain an infinite number of resonances with gradually increasing widths are considered. The asymptotic freedom requirement involves a relationship between the electric width of k-th resonance and its mass M_k derivative over the number k. It is shown that for the families of Ψ and Υ mesons the moment from experimental function R(s) is equal to the sum of the moment from a bare quark loop and the edge term which stems from replacing of summation by integration. These equalities are fulfilled up to 1% for 60 moments in the Ψ-meson family and up to 2% for 96 moments in the Υ-meson family. The electronic widths of the resonances and the Rho-meson mass are calculated. 7 refs.

49942 (ITEP–152-88) **Topics in low-energy p-barp interactions.** Kerbikov, B.O. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1988. 29p. Order Number DE91601061. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Theoretical interpretations of several new experimental results on low-energy p-barp interactions are presented. An effective range analysis of the LEAR data on p-barp elastic scattering and p-barp→n-barn charge-exchange reaction is carried out. Tentative reasons for the unusual behaviour of the real-to-imaginary ratio of the p-barp forward elastic scattering amplitude are pointed out. Restrictions on the NN-bar amplitude imposed by the strong interaction shift and width of the 1S-state of the antiprotonic hydrogen are derived. Evidence for the appearance of the Barry topological phase in antiprotonic hydrogen is presented. 50 refs.; 3 figs.

The methods used to construct the amplitudes in which the Froissart bound is saturated are classified and discussed. Analysis is made of a rather flexible parametrization combining some principally different cases. It is shown that the data cannot choose the type of the unitary representation for the scattering amplitude but they obviously point out to the Froissart component of the amplitude not to be related to the glueball reggeons. 33 refs.; 9 figs.; 2 tabs.

49949 (JINR-E–2-89-145) **Electroweak radiative corrections to deep inelastic scattering at HERA. Charged current scattering.** Bardin, D.Yu.; Burdik, C.; Christova, P.Ch.; Riemann, T. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1989. 16p. Order Number DE91601031. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Submitted to Z. Phys., C.

Analytic results are presented on electroweak radiative correction for charged-current deep-inelastic electron proton scattering at HERA energies. Contributions of one loop and radiative corrections are calculated separately. Infrared divergences are reduced and mass singularities are simplified. Single photon bremsstrahlung is included without cuts. 11 refs.; 5 figs.

49950 (JINR-R–1-89-64) **An impact parameter analysis of antiproton-proton elastic and inelastic scattering at 22.4 GeV/c.** Zlatanov, Z. (Vissh Khimiko-Tekhnologicheski Inst., Sofia (Bulgaria)); Kubik, V.M.; Tikhonova, L.A. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1989. 10p. (In Russian). Order Number DE91601065. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

The properties of elastic and inelastic p-barp-interactions at 22.4 GeV/c were studied as a function of impact parameters. The data were obtained using BC LUDMILA. The estimates of hadron transparency and of mean inelastic interaction radius square were obtained. In the framework of simple geometrical Monte-Carlo model for inelastic collisions the effective radii of hadrons and valons were estimated. 17 refs.; 6 figs.

Lab. of Theoretical Physics. 1989. 20p. (In Russian). Order Number DE91601066. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Submitted to Int. J. Mod. Phys., A.

Probabilities of the decays $\eta \to e^+e^-$, $\eta \to \mu^+\mu^-$ are calculated in the quark-loop model with a quark-meson vertex function dependent on the relative momentum of u(u-bar) d(d-bar)- and s(s-bar)-quarks. The two-photon transitional form factor is determined by the three-dimensional relativistic wave function of a bond (by a confinement potential of the oscillatory type) state of a quark and antiquark. Dispersive parts of the amplitudes of lepton decays of π^0, η-, η'-mesons are used to estimate the widths of $K_L \to e^+e^-$, $K_L \to \mu^+\mu^-$-decays in the model of dominating one-particle pole states and the theoretical results thus obtained are compared with experimental data. 26 refs., 1 fig., 3 tabs.

49952 (KEK–89-17, pp. 42-47) **B meson physics on Υ (4s).** Tanimoto, Morimitsu (Ehime Univ., Matsuyama (Japan)). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Nov 1989. (CONF-8910393–: Workshop for asymmetric B-factory at KEK, Tsukuba (Japan), 2-4 Oct 1989). In *Proceedings of the workshop on asymmetric B factory at KEK.* Order Number DE90777869. Source: NTIS (US Sales Only), PC A12/MF A01.

The charmless non-leptonic decays of the B meson are expected to provide a sensitive test of the standard model. In particular, the processes involving three s-quarks in the final state are rare decay modes because these dominant processes are loop-induced $b \to sg$ transitions, or so-called penguin diagrams. One typical mode of these rare decays is the $B \to K\phi$ process. The charmless decays through the penguin process have another source of CP violation, so new physics such as the fourth generation, SUSY and the three Higgs doublets models may play an important role in the CP violation of these decays. An investigation is made here of the contribution of the fourth generation to the CP violation in the $B \to K\phi$ decay. An analysis is made of the CP violating asymmetries of the $K\phi$ decay of the charged B mesons and the neutral B mesons on Υ (4s), which is advantageous to observation of the effect of new physics. The branching ratio of $B \to K\phi$ is 1×10^{-5} and consequently, a 3σ effect would require at least 10^{10} Υ (4s)'s if the asymmetry is of an order of 1%, but 10^7-10^8 Υ (4s)'s if it is $\pm 15\%$. Since 10^6-10^7 Υ (4s)'s are attainable at CESR(Υ 4s), it is expected that the fourth generation effect will be observed in the $B_u^{\pm} \to K^{\pm}\phi$, $B_d^0 \to K_s\phi$ and $B_d^0 \to K_s\phi$ processes on Υ (4s). (N.K.).

49953 (KEK–89-17, pp. 55-60) **Comparison of B factories.** Abe, Kazuo (National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan)). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Nov 1989. (In Japanese). (CONF-8910393–:

Workshop for asymmetric B-factory at KEK, Tsukuba (Japan), 2-4 Oct 1989). In *Proceedings of the workshop on asymmetric B factory at KEK.* Order Number DE90777869. Source: NTIS (US Sales Only), PC A12/MF A01.

The B factory is a high-strength accelerator that is designed to study the origins of the flavor and CP violation through accurate measurement of the decay of B mesons. This type of accelerators can be divided into three groups. Those used at DORIS (West Germany) and CESR (U.S.), called symmetric colliders, are intended to cause electrons and positrons having the same energy to collide with each other to produce a BB resonance state. Compared to these, an accelerator designed to produce a BB resonance state by causing electrons and positrons with different energies to collide is called an asymmetric collider. The present study compares the accelerator at CESR, the one at LEP, and the asymmetric collider at KEK. Their luminosity, the number and type of B mesons to be formed, and events to be observed are tabulated. Their comparison is also made with respect to major physical quantities hoped to be determined from B meson experiments, possible methods for them, and their advantages. Such major physical quantities include the probability of the decay from the b quark to the u quark, the mixing of Bs mesons and their anti-particles, and the CP violation. (N.K.).

49954 (KIFVE–88-08, pp. 35-38) **Probable method of $W^{\pm}$-boson mass and widths measurements.** Ivkin, A.V.; Nazirov, M.T. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. (In Russian). In *Proceedings of the seminar of young scientists HEPI AN Kaz SSR. Part 1: 1. High energy physics and computer technique.* Order Number DE90706215. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The method for measuring mass and width of W-boson decay according to the features of a spectrum of their bremsstrahlung electromagnetic radiation is suggested. Differential cross section of reaction $e^+e^- \rightarrow W^+W^-\gamma$ in the approximation of soft photons is calculated. It is shown that the method operates better at high energies when W-bosons producing are relativistic. 2 refs.; 1 fig.

49955 (KIFVE–88-08, pp. 29-34) **Sensitivity of angular distribution of high energy muon flux from atmosphere to hadron charm production parameters.** Madigozhin, D.T. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. (In Russian). In *Proceedings of the seminar of young scientists HEPI AN Kaz SSR. Part 1: 1. High energy physics and computer technique.* Order Number DE90706215. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Angular distribution of a muon component of cosmic rays of high energies with account of contribution to the flux of muons of charm particle decay is calculated analytically at scaling approximation. Sensitivity of angular distribution to charm particle production cross section is investigated. The upper boundary of a part of charm particle production cross section out of total inelastic cross section in the energy region from 100 to 300 TeV, equalling 0.125, is obtained on the basis of comparison with the experiment according to muon recording by X-ray emulsion chambers. 7 refs.; 1 fig.

49956 (KIFVE–88-15) **Possible change of growth regime for the total cross section of hadron processes at E_0 >or approx. 10^{15} eV.** Kuchin, I.A. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. 17p. (In Russian). Order Number DE91601068. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

In the framework of the analogy between the elastic scattering of hadrons as composite particles and Raman scattering of the light, a probable nature of the two-componentness of the strong interaction at high-energy region is discussed. Possible cause and character of the change of the elementary act with energy growth are pointed out. It is shown that the just observed rise of the pp total cross section $\approx \ln^2 s$ may be considered as the indication to the transition's beginning to more sharp increase of the cross section in the region E_0 >or approx. 10^{15} eV. 24 refs.; 3 figs.

49957 (RAL–90-030) **Amplitude analysis of $\gamma\gamma \rightarrow \pi\pi$ from threshold to 1.4 GeV.** Morgan, D. (Rutherford Appleton Lab., Chilton (UK)); Pennington, M.R. Rutherford Appleton Lab., Chilton (UK). May 1990. 30p. (DTP–90-24). Order Number DE91601032. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

A new amplitude analysis of results on $\gamma\gamma \rightarrow \pi^+\pi^-$ from the Mark II and $\gamma\gamma \rightarrow \pi^0\pi^0$ from the Crystal Ball experiments is reported. Key constraints from the low energy theorem and from analyticity and unitarity that relate $\gamma\gamma \rightarrow \pi\pi$ to other meson scattering reactions are built into the trial forms. Despite these restrictions, the limited angular coverage of the experiments means that solutions with quite different proportions of S wave and D waves of both helicities 0 and 2 are admitted above 1 GeV. This leads to a much wider range of possibilities for the couplings of the broad resonances $f_0(\epsilon)$ and $F_2(1270)$ than is commonly supposed. The better fits have Γsub $_{f0}$ in excess of 4 keV and a ratio of Γsub $_{f0}/\Gamma_{f2}$ greater than 2. (Author).

Inst. de Fisica. Apr 1990. 10p. Order Number DE91600566. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

In d=3 dimensions the IOSp(d/2) algebra admits a non-trivial modification. It is shown that 3-dimensional Chern-Simons theory in Landau gauge has a global symmetry based on this large Lie superalgebra. (author).

49959 (IFUSP-P–838) **BRST quantization of spinning relativistic particles with extended supersymmetries.** Pierri, M.; Rivelles, V.O. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Apr 1990. 12p. Order Number DE91600567. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

We perform the calculation of the transition amplitude for spinning relativistic particles with N-extended supersymmetries using the BRST-BFV technique. The resulting transition amplitude can be interpreted in a field theory context as the Feynman propagator for the field strenght of a field with spin N/2. We also show that there is a global anomaly for odd dimensions so that the model is consistent only for even dimensions. The gauge invariance of the respective field theory does not become manifest in this formulation. (author).

49960 (KEK–89-17, pp. 48-54) **CP violating decay of neutral B meson.** Wakaizumi, Seiichi (Tokushima Univ. (Japan)). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Nov 1989. (In Japanese). (CONF-8910393–: Workshop for asymmetric B-factory at KEK, Tsukuba (Japan), 2-4 Oct 1989). In *Proceedings of the workshop on asymmetric B factory at KEK.* Order Number DE90777869. Source: NTIS (US Sales Only), PC A12/MF A01.

The report focuses on the CP violation in the decay of neutral mesons, hadronic decay through mixing of B_d and B_s mesons, and time dependence of the CP asymmetry. It is shown that B_d-B_d mixing is large, indicating that a large CP asymmetry could be involved in the hadron decay of B_d and B_s mesons. If a CP asymmetry above 10%, much higher than the 2-3% asymmetry expected from the third generation standard model for the $B_s \rightarrow D^+D^-$ and F^+F^- modes, should be found in experiments, it could indicate the existence of 'new physics', such the existence of the fourth generation, which could not be covered by the standard model. A CP asymmetry tagged with lepton on Υ (4s) is likely to show a strong time dependence in such modes as $B_d \rightarrow \Upsilon\pi^+\pi^-$, D^+D^- and F^+F^-. If the fourth generation exists, new evidence that is not found in the standard model might be identified in the $B_d \rightarrow D^+D^-$ and F^+F^- mode in a region where the time difference between the two vertices is small. (N.K.).

49961 (KEK–89-17, pp. 92-110) **A study on CP violation.** Ozaki, Hitoshi (National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan)). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Nov 1989. (In Japanese). (CONF-8910393–: Workshop for asymmetric B-factory at KEK, Tsukuba (Japan), 2-4 Oct 1989). In *Proceedings of the workshop on asymmetric B factory at KEK.* Order Number DE90777869. Source: NTIS (US Sales Only), PC A12/MF A01.

The study focuses on the estimation of the integral luminosity required to observe the CP violation in the $B^0 \rightarrow \Psi K_s$ reaction. As in a

K meson system, different CP violating phenomena are likely to occur in a B meson system. The B factory at KEK is intended particularly for those reactions that end in a characteristic CP state. In such a case, CP violation takes place as interference between the amplitude associated with the direct decay from a B^0 meson to a final state and that associated with the decay from an anti-B^0 meson to a final state through B-anti-B mixing. Major ones of such final states include ΨK_s and $\pi\pi$, and the associated CP violation has the features that the degree of asymmetry is high (10%) and that the degree of asymmetry can be expressed by the Kobayashi-Maskawa matrix. The Kobayashi-Maskawa mechanism of quarks can be checked most directly by measuring the degree of asymmetry. An equation is derived for the integral luminosity required for measuring CP violation factors by means of an asymmetric e^+e^- accelerator, and various parameters included in the equation are described. Luminosity calculations are made and results are discussed. (N.K.).

The relations between integrable systems and conformal field theories have first been worked out in the continuum limit. Using Coulomb gas and Bethe ansatz techniques, critical exponents and partition functions were obtained for various lattice models giving exact results of practical interest as well as a precise correspondence with conformal theories. It was later realized that the two subjects exhibit numerous similarities, and although this is maybe unexpected a priori, that some prints of the conformal invariant structure are present on the lattice before the continuum limit. We review here recent progress on this question.

49964 (IFUSP-P–834) **Selection of collective degrees of freedom in the boson space.** Menezes, D.P. (Sao Paulo Univ., SP (Brazil). Inst. de Fisica); Yoshinaga, N. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Apr 1990. 21p. Order Number DE91600516. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Two methods for selecting collective bosons, one proposed by Klein and Vallieres and the other one being a number conserved Tamm Dancoff method, are applied in this work to boson mapping methods. The first mapping to be tested is a Dyson boson mapping in the SD shell and the second one is a mapping developed by Bonatsos, Klein and Li and applied to two j-shells with $|j_1 - j_2| = 4$. Whenever the boson mappings are accurate, the selection of collective bosons gives good results, independently of the method considered. (author).

Inst. de Fisica. May 1990. 28p. Order Number DE91600517. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

We consider a three dimensional model of spinor fields with a Thirring like, quadrilinear self interaction. Using either two or four component Dirac spinors, we prove that the 1/N expansion for the model is renormalizable if a gauge structure to select physical quantities is introduced. For certain values of the coupling the leading 1/N approximation exhibits bound state poles. Dynamical breaking of parity or chiral symmetry is shown to occur as a cooperative effect of different orders of 1/N, if N is smaller than the critical value $N_c = {}^{128}/_{\pi^2 D}$, where D is two or four depending on wether the fermion field has two or four components. (author).

Inst. Fiziki Vysokikh Ehnergij. 1988. 44p. Order Number DE91600518. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Submitted to Intern. J. Mod. Phys. A.

The single-time reduction method proposed in other refs. for the system of two scalar particles is generalized for the case of two-fermion system. A self-consistent procedure of single-time reduction has been constructed both in terms of the Bethe-Salpeter wave function and in terms of the Green's function of two-fermion system. Three-dimensional dynamic equations have been obtained for single-time wave functions and two-time Green's functions of a two-fermion system and the Schroedinger structure of the equations obtained is shown to be a consequence of the causality structure of the local QFT. 32 refs.

49967 (ITF–88-111) **Bound states and the formalism of composite operators in gauge theories.** Gusynin, V.P.; Kushnir, V.A.; Miranskij, V.A. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1988. 25p. (In Russian). Order Number DE91600520. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

A formalism for describing the Green's functions of composite operators on nonperturbative vacuum is suggested. In the ladder approximation the formalism is applied to determine the Green's functions of composite operators in vector-like gauge theories. The properties of scalar and pseudoscalar bound states in the dynamical regime with a nontrivial fixed point are considered. The hypothesis of a partially conserved dilation current in such a dynamical regime is discussed. 11 refs.; 10 figs.

49968 (ITF–88-176) **On zero modes of the Dirac operator on noncompact two-dimensional surface in magnetic field.** Sitenko, Yu.A. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1989. 12p. (In Russian). Order Number DE91600521. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Zero modes of the two-dimensional Dirac operator on a noncompact single-connected surface in an external magnetic field are considered. The number of square integrable zero modes is shown to be determined by the global characteristics of the external field and the surface: the magnetic flux through the surface and the Gauss curvature are integrated over the surface. The equivalence of the square integrability condition to the conditions of the index theorem for a closed compact surface is discussed. 13 refs.

49969 (ITP–88-156) **Seeley-Gilkey coefficients for the fourth-order operators on a Riemannian manifold.** Gusynin, V.P. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1989. 24p. Order Number DE91600522. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

A new covariant method for computing the coefficients in the heat kernel expansion is suggested. It allows one to calculate Seeley-Gilkey coefficients for both minimal and nonminimal differential operators acting on a vector bundle over a Riemannian manifold. The coefficients for the fourth-order minimal operators in arbitrary dimension of the space are calculated. In contrast to the second-order operators the coefficients for the fourth-order (and higher) operators turn out to be essentially dependent on the space dimension. The algorithmic character of the method suggested allows one to calculate coefficients by computer using the analytical calculation system. 19 refs.; 1 fig.

For a simple nonrelativistic fermion model it is shown that the Schwinger anomaly can be viewed as an effect of the infinite depth of the Dirac sea. 4 refs.

49971 (JINR-E-4-89-19) **Two new types of solvability of the one-dimensional anharmonic oscillators.** Znojil, M. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1989. 9p. Order Number DE91600524. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

In the Schroedinger picture, we propose a new modification of the so-called Hill-determinant technique. It is shown to guarantee a proper matching of the two underlying power series $\Psi(x)$ at x=0. In the Heisenberg picture, an evolution of the same one-dimensional polynomially anharmonic oscillator is considered. A modified Peano-Baker method is applied and shown to define the explicit solutions by recurrences. 11 refs.

Submitted to Teor. Mat. Fiz.

The model of the Euclidean gauge theory is constructed for the system of interacting scalar and vector fields which is based on a generalized concept of the field itself in the region of high energies. The key role is played by the momentum Lobachevsky four-space with the curvature radius M as a new physical constant (fundamental mass). As a Fourier transform we use the expansion over unitary representations of the group of motions of the Lobachevsky p-space. Upon going to the corresponding new configurational representation the basic equations of the theory become differential-difference ones with the step $\approx 1/M$. In this representation, local gauge transformations of material and vector fields are defined. Due to the presence of the fundamental mass M in the theory, the gauge transformation law of the vector field turns out to be essentially modified and is a combination of the standard Yang-Mills transformations and gauge vector field transformations specific of the theory on the lattice. However, the latter does not break the Euclidean O(4) invariance of the model. In the low-energy approximation ($M \to \infty$) this theory is equivalent to the standard one. 17 refs.

49973 (KEK-89-22, pp. 179-189) **Scattering amplitude of string on orbifold.** Nima, Shuji (Kyushu Univ., Fukuoka (Japan). Faculty of Science). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Jan 1990. (In Japanese). (CONF-8911199-: Workshop on topology, field theory and superstrings, Tsukuba (Japan), 6-10 Nov 1989). In *Proceedings of the workshop 'topology, field theory and superstrings'.* Order Number DE90798858. Source: NTIS (US Sales Only), PC A17/MF A01.

The report discusses the scattering amplitude of closed bosonic strings on an orbifold as calculated by means of the Polyakov's path integral, and provides a general form of a classical solution required for the calculation. An equation is given for the boundary condition for closed bosonic strings on an orbifold. Several strings that are consistent with a boundary condition corresponding to the elements of a group G exist on the orbifold. An effective way of calculating the scattering amplitude of these strings is to use the Polyakov's path integral. This is considered useful for the calculation because it permits a geometric approach and does not need to rely on the Hilbert space. The basic approach is described first, and it is shown that a classical solution consistent with a certain boundary condition has to be identified to permit the calculation of the scattering amplitude of strings on the orbifold by means of the Polyakov's path integral. Then, the calculation process is discussed in relation to the extension of the world sheet, the form of the classical solution, and characteristics of a key parameter. (N.K.).

Horowitz and Srednicki have recently shown that the two-point function of the topological quantum field theory of Schwarz produces the linking number of two surfaces of dimension p and n-p-1 in an n dimensional manifold. Their derivation method for the linking number is heavily based on the Hodge theorem and some results of the eigenform of the Laplacian. The present study rederive their results in the abelian case and extends them to the nonabelian case by making use of a variational method based on the properties of a topological quantum field theory. Actually, the variational method has already proved to be useful for direct derivation of link invariants in three dimensions without relying on the two-dimensional conformal field theory. By this direct proof, one could have clear understanding of the equivalence between the three-dimensional Chern-Simons action and link polynomials. The variational method is briefly outlined, and some comments are made on difference between the above variational method and the one proposed here. (N.K.).

49975 (KEK-89-22, pp. 377-382) **'String amplitudes': What can we do about the divergent integrals?.** Amano, Kaoru (Tokyo Inst. of Tech. (Japan). Dept. of Physics). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Jan 1990. (CONF-8911199-: Workshop on topology, field theory and superstrings, Tsukuba (Japan), 6-10 Nov 1989). In *Proceedings of the workshop 'topology, field theory and superstrings'.* Order Number DE90798858. Source: NTIS (US Sales Only), PC A17/MF A01.

The rules for perturbative construction of scattering amplitude constitute the most well-established part of the string theory. They lead to neat integral expressions that represent the amplitude as the sum over the geometry of the string world sheet. However, if one really tries to evaluate the expression, one has to go a long way from there, for the integral does not represent the amplitude in any direct way. The present report focuses on this problem. A study is made to show that the traditional integrals purporting to be string amplitudes are divergent and to identify a remedy. Obviously, any divergent amplitude is not acceptable in a case like the one-loop four-point amplitude. Although the origin of the divergences seems to relate to physical singularities, the integral fails to give imaginary part required for unitarity but only gives infinities which are not desired. Respecting the observation that the integral representation corresponds to the Euclidean Feynman integral, one may modify the integral by postulating an offshell integral for a certain Euclidean, then continuing the function analytically, and defining the physical amplitude by the limit value of the function. This would take one to the correct Minkowskian expression. Some examples are also shown. (N.K.).

49976 (KIFVE-88-08, pp. 39-44) **Quantum corrections to kink-type classical solution in one-dimensional phi 4 model.** Agasyan, N.O. (Moskovskij Gosudarstvennyj Univ., Moscow (USSR)); Akhmetov, E.A.; Kozhamkulov, T.A. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. (In Russian). Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Quantum corrections to the classical soliton solution of the kink type in a one-dimensional model are determined in the paper. Quantization is carried out by the method of functional intergration. Scheme of zero mode selection is presented.

49977 (MPI-PAE/Exp.El.-226) **Limits on compositeness of quarks and leptons from e^+e^- annihilation.** Kroha, H. CELLO Collaboration. Max-Planck-Institut fuer Physik und Astrophysik, Muenchen (Germany, F.R.). Werner-Heisenberg-Inst. fuer Physik. Jun 1990. 7p. (CONF-900183-: Recontres De Moriond '90: new and exotic phenomena, Les Arcs (France), 20-27 Jan 1990). Source: Available from Max-Planck-Institut fuer Physik und Astrophysik, Muenchen (Germany, F.R.). Werner-Heisenberg-Inst. fuer Physik.

Data of the CELLO experiment on pair production of electrons, muons, taus, and heavy quarks have been investigated in terms of compositeness. CELLO has performed simultaneous measurements of the differential cross sections for canti c and banti b production in e^+e^- annihilation. Different methods are compared for treating the common normalization errors of the data points when fitting the predicted cross sections. We discuss difficulties in the interpretation of experimental limits on the compositeness scale Λ not mentioned in previous measurements. Λ turns out not to be the appropriate parameter to estimate effects of a possible substructure of quarks and leptons. Limits on Λ from different experiments can neither be compared nor combined with each other. Therefore an analysis of the combined data on fermion pair production from PEP and PETRA has been performed. (orig.).

49978 (BNL–44911) **Proceedings of the workshop on heavy ion physics at the Alternating Gradient Synchrotron (AGS).** Hansen, O. (ed.). Brookhaven National Lab., Upton, NY (USA). [1990]. 512p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. (CONF-900331–: Workshop on heavy ion physics at the alternating gradient synchrotron (HIPAGS), Upton, NY (USA), 3-7 Mar 1990). Order Number DE90017639. Source: NTIS, PC A22/MF A01; OSTI; INIS; GPO Dep.

The Workshop in Heavy Ion Physics at the Alternating Gradient Synchrotron (HIPAGS) was held at Brookhaven from March 5 to 7, 2–1/2 days. The purpose was first to demonstrate the status of the experimental program of nucleus-nucleus collisions which started in the fall of 1986 with the first ^{16}O beam at 14.6 GeV/c per nucleon. The second objective was to present the theoretical concepts and models being applied to interpret the data. The program also included surveys of the results from the heavy ion program at the CERN-SPS, in areas that are relevant for the AGS program and discussions of future directions. The specific perspective at Brookhaven is the availability of Au beams at 11.5 GeV/c per nucleon from 1992, to which allusions were made so many times during the workshop. These proceedings are organized in the same way as the workshop program, so the list of papers is identical to the program. The workshop was very informal and very preliminary results were shown by experimentalists and theorists alike. Therefore it is strongly advised that anybody who quotes results or ideas from these proceedings, first consult with the authors of the paper being quoted. To facilitate that process, electronic mailing addresses (BITNET) are included with the list of papers and authors.

49979 (CONF-900601–8) **Nucleon parton distributions and nuclear structure.** Geesaman, D.F. Argonne National Lab., IL (USA). [1990]. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From 12. international conference on particles and nuclei; Cambridge, MA (USA); 24-29 Jun 1990. Order Number DE90017807. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The current experimental status of measurements of nucleon structure functions in deep inelastic lepton scattering is presented. Recent BCDMS and SLAC results provide a consistent data set for charged lepton scattering. New probes of parton distributions: direct photons, Drell Yan di-muon production, W, Z and heavy quark production are providing information on the gluon an antiquark distributions. The implications of these data on our understanding of the structure of the nucleon, and the structure of the nucleon in the nucleus are discussed. 26 refs., 9 figs.

49980 (CONF-900814–13) **Microscopic integral cross section measurements in the Be(d,n) neutron spectrum for applications in neutron dosimetry, radiation damage and the production of long-lived radionuclides.** Smith, D.L.; Meadows, J.W.; Greenwood, L.R. Argonne National Lab., IL (USA). [1990]. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31-109-ENG-38. From 7. ASTM-EURATOM symposium on reactor dosimetry; Strasbourg (France); 27-31 Aug 1990. Order Number DE90017857. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Integral neutron-reaction cross sections have been measured, relative to the U-238 neutron fission cross-section standard, for 27 reactions which are of contemporary interest in various nuclear applications (e.g., fast-neutron dosimetry, neutron radiation damage and the production of long-lived activities which affect nuclear waste disposal). The neutron radiation field employed in this study was produced by bombarding a thick Be-metal target with 7-MeV deuterons from an accelerator. The experimental results are reported along with detailed information on the associated measurement uncertainties and their correlations. These data are also compared with corresponding calculated values, based on contemporary knowledge of the differential cross sections and of the Be(d,n) neutron spectrum. Some conclusions are reached on the utility of this procedure for neutron-reaction data testing.

49981 (FEI–1917) **Nuclear reaction cross sections recommended as the standards for neutron measurements.** Bychkov, V.M.; Kornilov, N.V.; Pashchenko, A.B.; Skripova, M.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst. 1988. 43p. (In Russian). Order Number DE91601229. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Cross sections and recommendations of International Committee on Nuclear Data for reactions used as standards during neutron measurements are presented. A new commentary based on discussions of problems of standard data at the conferences of 1982 in Smolenitsa and 1984 in Hill, is prepared. Recent information concerning the spectrum of Cf-252 spontaneous fission instant neutrons, presented at the conference in Leningrad in 1986 is presented. 33 refs.; 10 figs.

49982 (FRCEA-TH–288) **Charged pion production in nucleus-nucleus collisions AT E/A between 400 and 800 MeV.** Cavata, C. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Nucleaire a Moyenne Energie; Paris-11 Univ., 91 - Orsay (France). Nov 1989. 242p. (In French). Order Number DE91702152. Source: NTIS (US Sales Only), PC A11/MF A01.

This thesis is devoted to the experimental study of pion production in relativistic heavy ions collisions. The first two chapters introduce the basic concepts and offer a review of the currently used theoretical models. The data presented were taken at the SATURNE accelerator with the DIOGENE detector. The last part is totally devoted to our results. The data analysis is described, with an emphasis on the impact parameter selection. The pion multiplicity is systematically studied as concerns its various aspects and implications. The impact parameter, beam energy and system size dependence are presented and compared with the results of intranuclear cascade calculation. The possibility of determining the nuclear equation of state from this comparison is discussed. The pion multiplicity distribution is consistent with a Poisson law which rules out any coherent pion production mechanism. The double differential cross-sections are then presented for large and small impact parameters. The question of pion origin in heavy ion collisions is discussed by tagging the on nucleus-nucleus inelastic collision process and the delta resonance contribution. Finally, a systematic study of pion flow is given along with a possible explanation by pion absorption in nuclear matter.

AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Yadernoj Fiziki. 1988. 53p. (In Russian). Order Number DE91601238. Source: NTIS (US Sales Only), PC A04/MF A01; OSTI; INIS.

The paper presents tabulated experimental differential cross-sections of scattering of ^{3}He ions and αparticles with 50-60 MeV energy on ^{4}He, ^{6}Li, ^{7}Li, ^{9}Be, ^{12}C, ^{13}C, ^{14}N, ^{16}O, ^{20}Ne, ^{24}Mg, ^{28}Si nuclei in 10-170 deg angle range in laboratory coordinate system. A brief characteristics of the experiment is given as well as optimal parameters of optic potentials. 10 refs.; 27 tabs.

49990 (IYF–88-03) **Detection and experimental investigation of α-particle Wolf-Bragg scattering on quasicrystalline atomic nuclei.** Yushkov, A.V. (and others); Kuterbekov, K.A.; Pavlova, N.N. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Yadernoj Fiziki. 1988. 29p. (In Russian). Order Number DE91601239. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Precision measurements of angular distributions of differential cross sections of inelastic scattering of α-particles on light and medium nuclej with excitation of collective level 2^+ are carried out. A microstructure detected before of angular distributions of differential cross sections is confirmed by the authors. A full-scale analysis of literature data is carried out to detect the effect above mentioned. The microstructure of angular distributions of differential cross sections is interpreted as the volf-Bragg scattering unknown before on the internuclear quasicrystalline lattice formed by α-clusters in light nuclei and by nucleons - in medium one.

Submitted to Intern. school on Nucl. Phys., Brashov, Romania, 1988.

A review is presented of the experimental investigations on the stability of very neutron-rich light nuclei carried out at the JINR Laboratory of Nuclear Reactions. Results on mass excess measurements are reported for ^{4}H, ^{5}H, ^{6}H, ^{7}H and for the superheavy helium isotope ^{9}He. Some results from the joint JINR-Ganil experiment on the search for and study of new neutron-rich light nuclei are also given. Analyzed are new possibilities for the investigation of multineutron decay of light nuclei. 14 refs.; 10 figs.

49992 (KIFVE–88-16) **Study of multiparticle correlations in 200-400 GeV range.** Boos, E.G.; Zastrozhnova, N.N.; Kholmetskaya, A.V.; Yakobi, V.V. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. 20p. (In Russian). Order Number DE91601241. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Azimuthal correlations at individual events in pp- and pA-interactions at E_0=200 and 400 GeV are analysed on the basis of the photoemulsion technology. Single-jet events in two-dimensional planes: mean quasi-rapidity-standard deviation and medium azimuthal angle-standard deviation are detected. It is shown that average multiplicities of single-jet events is considerably less (approximately two-four times) than the average multiplicity of all interactions and they don't depend on the type of the target nucleus. The investigation of events accompanied by full destruction of hevy ions (Ag, Br) has shown isotropic distribution of azimuthal angles of shower particles. It is a new factor in favour of the fact that multiple production of particles in events, accompanying by their full destruction, is of another character in comparison with the production process in an elementary act and in interactions of light and heavy ions. 15 refs.; 3 tabs.; 3 figs.

49993 (LA-UR–90-2055) **General purpose nuclear data evaluations for ENDF/B-VI: Impact of cross-section standards.** Young, P.G. Los Alamos National Lab., NM (USA). [1990]. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-901101–15: American Nuclear Society winter meeting, Washington, DC (USA), 11-15 Nov 1990). Order Number DE90013168. Source: NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Over the past year the Cross Section Evaluation Working Group (CSEWG) has finalized and issued new evaluations for over 70 nuclides in Version 6 of ENDF/B. These data provide the foundation for a new series of reactor benchmark calculations. An integral part of the evaluation effort for ENDF/B-VI has been the most ambitious effort ever undertaken to systematically and simultaneously reevaluate the cross sections used for neutron standards. While a number of the materials and reactions identified as standards are directly involved in fission reactor calculations, the impact of the standards data is felt far beyond the specific standards reactions. The effect of the Version 6 standards data file on several evaluations of data of interest for fission reactors is discussed in this paper, together with the methodology used to utilize the standards.

49995 (IPNO-DRE-89-21) **Experiments on neutron-rich light nuclei at Ganil.** Mueller, A.C. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1989. 7p. (CONF-8906160--:). Order Number DE91700538. Source: NTIS (US Sales Only), PC A02/MF A01.

Some experimental results on neutron-rich isotopes, at Ganil, are discussed. Using ^{48}Ca to study the distributions of projectile - like fragments at intermediate energy, the identification of fragment nuclei is carried out. The half life measurements of unexplored neutron rich nuclei, applying the coincidence observation of delayed neutrons with beta rays and ^{48}Ca beam, at low counting statistics are performed. The results of the direct mass measurement are presented. The comparison of the masses of the oxygen isotopes up to the last neutron stable ^{24}O with theoretical predictions are carried out. The data on radii determination of Be and Li isotopes, obtained at Ganil, is given.

49996 (INS-823) **Real-pion states formed by virtual-pion beam: New family of nuclear excited states.** Yamazaki, Toshimitsu. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Apr 1990. 26p. Order Number DE90520258. Source: NTIS (US Sales Only), PC A03/MF A01.

Deeply bound pionic states are discussed from various points of view; highly excited nuclear states as a cluster family of pionic bound states, Σ atom/Σ hypernuclei, halo-like density distributions, virtual pion beam to produce pionic states, etc. (author).

49997 (ITEF-96-89) **Cumulative nucleon production in ^{3}Hep- and ^{3}Hp interactions at momenta of colliding nuclei 5 GeV/c.** Abdullin, S.K. (and others); Blinov, A.V.; Vanyushin, I.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 20p. (In Russian). Order Number DE91601248. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Inclusive cross sections of cumulative protons produced in ^{3}Hep- and ^{3}Hp-interactions under momenta of colliding 5 GeV/c nuclei are investigated. Experimental material is obtained using liquid-hydrogen ITEP chamber-80cm. Under the cumulative proton kinetic energy, exceeding 50 MeV inclusive cross section ratio $\sigma(^3\text{Hep}\rightarrow\text{pX})/\sigma(^3\text{Hp}\rightarrow\text{pX})=1.6\pm0.1$. Within the same energy interval evaluation of yield ratio of cumulative protons and neutrons, produced in ^{3}Hep -interactions, leads to $\approx$ 1.6 value. Asymmetry of mean multiple protons escaping forward and backward both in ^{3}Hep -and in ^{3}Hp interactions is observed. Averaged invariant distribution functions for cumulative protons and neutrons in ^{3}Hep-interactions and protons in ^{3}Hp-interactions are constructed (the averaging is performed within 90-180 deg and 120-180 deg intervals). To temperatures of such distributions are found. 43 refs.; 1 fig.

This work is devoted to the study of hot nuclei and especially to the difficulties encountered in reaching high excitation energies. It is first shown how data processing techniques can be considerably improved in order to handle more and more complex experimental data, then an analysis of the ^{40} Ar + ^{12}C reaction in reverse kinematics at incident energies ranging from 27 to 60 MeV/A is performed. Very phenomenological in a first step, this study then refers to partial fusion models and finally gives a comparison of the experimental data with the results of a code based on the Landau-Vlasov equations. This work enhances the inefficiency of the reaction mechanism to heat up nuclear matter.

Cross sections and analyzing powers have been measured for ^{12}C(p,n) at 494 MeV and 795 MeV and for Pb(p,n) at 795 MeV. The data span an energy loss range of at least 200 MeV, which is sufficient to clearly reveal the large peak associated with quasifree neutron knockout. The kinematics, cross section, and analyzing power for this peak are compared to the corresponding observables for free nucleon-nucleon scattering and to the observables calculated with a relativistic Fermi-gas model. 15 refs., 3 figs.

50001 (LBL-29361) **Complex fragment emission in binary and multifragment decay of very hot nuclear systems.** Moretto, L.G.; Blumenfeld, Y.; Delis, D.; Wozniak, G.J. Lawrence Berkeley Lab., CA (USA). Jul 1990. 17p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-9005257--1: International school on nuclear physics, Kiev (USSR), 28 May - 8 jun 1990). Order Number DE91000180. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Low-energy compound nucleus emission of complex fragments in the reaction ^{63}Cu + ^{12}C is used to infer the associated ridge-line potential. Compound binary emission of complex fragments at higher energies is illustrated for a variety of reactions. Complex fragment emission from 35 and 40 MeV/N ^{139}La + ^{12}C, ^{27}Al, ^{40}Ca and ^{51}V reactions has been studied. Multifragment events from these reactions were assigned to sources characterized by their energy and mass through the incomplete-fusion-model kinematics. Excitation functions for the various multifragment channels appear to be nearly independent of the system and bombarding energy. Preliminary comparisons of the data with sequential-statistical-decay calculations are discussed.

The study of light nuclei far from stability has been recently renewed by the possibility of production through the projectile fragmentation of intermediate energy heavy ion beams at GANIL. The results presented here have been obtained with the Projectile Fragments Isotopic Separation method developed at the LISE spectrometer. ^{22}O is a Tz = 3 nucleus and is the first in a series of seven such nuclei in the sd shell extending from ^{22}O to ^{24}Mg. Although the half life of ^{22}O was previously measured by Murphy et al., the present study is the first beta-gamma spectroscopy on this neutron rich nucleus. Five gamma lines have been attributed to the β decay of ^{22}O with a measured half life of T = (2.25±0.15)s and a partial decay scheme has been established.

This thesis is devoted to the experimental study of pion production in relativistic heavy ions collisions. The first two chapters introduce the basic concepts and offer a review of the currently used theoretical models. The data presented were taken at the SATURNE accelerator with the DIOGENE detector (chapter III). The last part is totally devoted to our results. The data analysis is described, with an emphasis on the impact parameter selection. The pion multiplicity is systematically studied as concerns its various aspects and implications. The impact parameter, beam energy and system size dependence are presented and compared with the results of intranuclear cascade calculation. The possibility of determining the nuclear equation of state from this comparison is discussed. The pion multiplicity distribution is consistent with a Poisson law which rules out any coherent pion production mechanism. The double differential cross-sections are then presented for large and small impact parameters. The question of pion origin in heavy ion collisions is discussed by tagging the one nucleus-nucleus inelastic collision process and the delta resonance contribution. Finally, a systematic study of pion flow is given along with a possible explanation by pion absorption in nuclear matter.

Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). Nov 1989. 22p. US DOE Grant DE-FG02-88ER40388. Order Number DE91702099. Source: NTIS (US Sales Only), PC A03/MF A01.

The contribution of particle-particle (hole-hole) and of particle-hole ring diagrams to the nuclear level density parameter at finite temperature is calculated. We first derive the correlated grand potential with the above ring diagrams included to all orders by way of a finite temperature RPA equation. An expression for the correlated level density parameter is then obtained by differentiating the grand potential. Results obtained for the ^{40}Ca nucleus with realistic matrix elements derived from the Paris potential are presented. The contribution of the RPA correlations is found to be important, being significantly larger than typical Hartree-Fock results. The temperature dependence of the level density parameter derived in the present work is generally similar to that obtained in a schematic model. Comparison with available experimental data is discussed.

The narrow structure in the energy dependence of the charged pion yields generated by protons on the copper nucleus at 90 deg in the laboratory frame was investigated. A new upper limit of the structure width (FWHM) $\Delta T_p \leq 5$ MeV in the incident proton energy is obtained. For the first time the manifestation of the structure is observed at 115 and 125 deg angles in the laboratory frame on the same nucleus. 9 refs.; 2 figs.

Order Number DE90017666. Source: NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

In this paper we report on the entry points leading to superdeformed (SD) as well as normal bands. We find that, compared to normal bands, the entry spins for the SD bands are about 9 $\hbar$ higher, and the entry excitation energy 1–3 MeV colder. We also conclude that population of the SD bands represents successful competition against fission. SD bands in both the Dy and Hg regions are considered.

50012 (GANIL-P–8921) **Central collisions at the fermi energy.** Harar, S. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). 1989. 11p. (CONF-8910237–: International school seminar on heavy ion physics, Dubna (USSR), 3-12 Oct 1989). Order Number DE91702098. Source: NTIS (US Sales Only), PC A03/MF A01.

Heavy ion induced collisions at the Fermi energy open the opportunity to study equilibrated nuclear matter in extreme conditions of excitation energy, angular momentum, shape, etc... In this report, one will focus on the formation and decay properties of hot nuclei achieved at Ganil by using the fusion-fission process. Thus, the research program is centered on two main aspects. (1) Conditions which determine nuclear dynamics leading to the fusion of colliding ions. (2) Properties associated to the cooling mechanisms after the formation of hot nuclei.

50014 (RCNP-P–108, pp. 151-157) **Gamma ray from highly excited ^{190}Hg and ^{110}Sn.** Iwata, Yousei (Hiroshima Univ. (Japan). Faculty of Science). Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics. Nov 1989. (In Japanese). (CONF-8908235–: Workshop on nuclear structure by gamma spectroscopy, Ibaraki (Japan), 31 Aug - 2 sep 1989). In *Proceedings of the workshop on nuclear structure by gamma spectroscopy.* Order Number DE90798857. Source: NTIS (US Sales Only), PC A09/MF A01.

The report briefly outlines some experiments with giant dipole resonance formed on highly excited ^{190}Hg or ^{110}Sn. A crystal ball is used to measure the spectrum of gamma rays from a highly excited Hg. This is performed in a recoil nucleus mass analyzer, and recoil nuclei and gamma rays are measured simultaneously. An appropriate excitation energy is selected so that three or four neutrons are emitted from the reaction $^{48}Ca+^{142}Nd \rightarrow ^{190}Hg^*$. The mass spectrum of the recoil nuclei is found to contain a broad peak associated with ^{188}Hg in addition to strong peaks due to ^{186}Hg and ^{187}Hg. Most of the residual ^{188}Hg nuclei result from 2n reactions. In this case, it can be assumed that the energy is absorbed by gamma rays instead of a neutron. The intensity associated with the 3n channels decreases exponentially and there is no evidence of gamma rays from giant dipole resonance. For ^{110}Sn, a study is made of the spectrum of gamma rays emitted from the reaction $^{40}Ar+^{70}Ge$. It is shown that the intensity of giant dipole resonance decreases with increasing temperature. It is also revealed that the width of the giant dipole resonance increases due to fluctuations in the shape of the nuclei. (N.K.).

50015 (CEA-CONF–9976) **Hyperdeformed pear-shaped nuclei.** Blons, J.; Paya, D. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Nucleaire a Basse Energie. 1989. 10p. (CONF-890686–: International conference on new aspects of nuclear spectroscopy, Crete (Greece), 25 Jun - 1 jul 1989). Order Number DE91702094. Source: NTIS (US Sales Only), PC A02/MF A01.

Several wells are found in the potential energy surface of the actinides. The first well corresponds to the ground state deformation ($\epsilon_2 \simeq 0.2$). The second well accomodates fission isomers with a larger deformation ($\epsilon_2 \simeq 0.6$). A third well is calculated to occur at the $\epsilon_2 \simeq 0.9$, $\epsilon_3 \pm 0.2$ quadrupole and octopole deformation, respectively. In this paper, we present experimental evidence for the existence of hyperdeformed pear-shaped thorium nuclei in this third well.

50016 (IAE–4869-2) **Low-energy conversion electrons from primary fragments of uranium 235 fission by thermal neutrons.** Guseva, E.V.; Pelekhov, V.I.; Sergeev, M.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 16p. (In Russian). Order Number DE91601302. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The conversion electron spectra from primary fragments of uranium-235 thermal fission, identified by mass and total kinetic energy, have been measured. An electron yield, higher than those observed earlier, from fragments with a postneutron mass of A=87-88 has been observed, which is due to unresolved group of sufficiently intense k-lines from gamma-transitions with energies of 43-52 keV much lower than the average one for fragments in this mass region ($E_\gamma \approx 850$ keV), known so far. Dependence of the intensity of a complex conversion peak 42.3 keV on the total kinetic energy of fragments in the spectra relating to the specified range

of conventional mass and normalized to the fragment yield in the chosen 10 MeV ranges of kinetic energy has also been found. 11 refs.; 9 figs.

50017 (JINR–2-35-89, pp. 43-46) **Detection of the radioactive decay of ^{236}Pu involving the emission of ^{26}Mg nuclei.** Ogloblin, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii); Venikov, N.I.; Tret'yakova, S.P. Joint Inst. for Nuclear Research, Dubna (USSR); Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions. 1989. (In Russian). In *JINR rapid communications: Collection.* Order Number DE90706214. Source: NTIS (US Sales Only), PC A04/MF A01; OSTI; INIS.

Two events of ^{236}Pu decay accompanied by the emission of magnesium nuclei have been recorded by means of solid-state track detectors. The ratio between the probability of this channel and that of alpha decay is about $2x10^{-14}$. The partial half-life is about $1.5x10^{14}$ years. 15 refs.; 1 fig.; 1 tab.

Although the importance of the residual T = 0 proton-neutron (p-n) interaction in inducing single nucleon configuration mixing, nonspherical nuclear shapes, collectivity, and phase transitions have been known for nearly forty years, its widespread ramifications have become more fully appreciated only recently as a unified picture of the effects of the p-n interaction is emerging. A phenomenological approach that has proved useful is the N_pN_n scheme and the associated concept of the P factor. Empirical p-n matrix elements disclose intriguing microstructure which reveals much about the role of the p-n interaction and its different components.

Order Number DE90017635. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The widespread effects of the residual T=0 proton-neutron (p-n) interaction in the evolution of nuclear structure are discussed. Although these effects in inducing single nucleon configuration mixing, and hence in the development of non-spherical nuclear shapes, collectivity, and the associated shape and phase transitions have been known for four decades, it is only in recent years that their deep ramifications have become more fully appreciated. This had led to a unified phenomenological understanding of the role of the p-n interaction in nuclear collectivity and to, for example, the proposal of the N_pN_n scheme and the associated concept of the P factor, which is a normalized value of N_pN_n reflecting the average number of p-n interactions per valence nucleon. Simultaneously, experimentally-determined p-n matrix elements for many nuclei have been extracted: they disclose striking anomalies for N=Z nuclei, and intriguing microstructure. These developments and empirical results will be discussed along with microscopic calculations that can be used to interpret them. 18 refs., 13 figs.

50021 (BNL–45011) **Empirical proton-neutron interaction energies and nuclear structure.** Brenner, D.S. (Clark Univ., Worcester, MA (USA)); Chou, W.T.; Casten, R.F.; Zhang, J.Y.; Wesselborg, C. Brookhaven National Lab., Upton, NY (USA). [1990]. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016 ;FG02-88ER40417. (CONF-900912–2: 8. international conference on atomic masses and fundamental constants, Jerusalem (Israel), 9-14 Sep 1990). Order Number DE90017632. Source: NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Empirical proton-neutron (p-n) interaction energies are extracted for all even-even nuclei with well-known binding energies using a simple double difference equation. Three features are disclosed: a systematic decrease of p-n interaction strengths (excepting N=Z nuclei) with increasing A, large interaction strengths for N=Z nuclei, and microstructure in doubly magic and deformed regions. Shell model calculations are used to explain the behavior of N=Z and other nuclei in the sd shell. Arguments based on orbit occupancy are introduced to explain microstructure effects in heavier nuclei and are given quantitative support by simple microscopic Nilsson and Shell Model calculations. The analysis sheds light on the relative roles of monopole and quadrupole components of the p-n interaction in determining nuclear structure. 19 refs., 5 figs.

50022 (CONF-901057–1) **Superdeformation in the mercury region.** Chasman, R.R. Argonne National Lab., IL (USA). [1990]. 17p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From 7. international symposium on capture gamma-ray spectroscopy and related topics; Pacific Grove, CA (USA); 14-19 Oct 1990. Order Number DE90017810. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

A brief history of superdeformation is presented. Calculations of superdeformed well depths, single particle energy level diagrams at I = 0, orbital alignments as a function of rotational frequency and dynamical moments of inertia are presented. The sensitivity of calculations to the details of the spin-orbit interaction are examined. Comparisons with experimental results are made. 37 refs., 9 figs.

50023 (CONF-9004209–7) **Some thoughts on opportunities with reactions using radioactive beams.** Schiffer, J.P. (Argonne National Lab.,. IL (USA)). Argonne National Lab., IL (USA). [1990]. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From Workshop on the science of intense radioactive ion beams; Los Alamos, NM (USA); 10-12 Apr 1990. Order Number DE90017805. Source: NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

I was asked to talk about the use of radioactive beams for nuclear reactions. My overall perspective is that the scientific justification for such studies must be done carefully. To go to the added complexity of radioactive beams one must clearly demonstrate the need for obtaining information about nuclear structure or processes, information that is not otherwise available. On the other hand, much of what we know about nuclear structure comes from nuclear reactions with stable nuclear beams and targets. While a certain amount of information about far from stability nuclei may be obtained from the study of their radioactive decays, this is limited. Our knowledge and understanding of nuclear structure comes from stable nuclei: energy levels, their spins and parties, and very importantly the matrix elements characterizing them. These are largely determined by reaction studies with normal stable nuclei. The extension of such studies to unstable nuclei, far from stability, may well hold qualitative surprises, or at the very least give a firmer basis to our understanding of nuclear structure. Perhaps it is a matter of taste, but if one wishes to start on this endeavor then it is best to begin with simple, easily accessible features. The "simplest" nuclei are the ones that form doubly-closed shells and the easiest features to explore initially are the single-particle states and the collective excitations that one can build on these. I would like to emphasize that a unique facility for this type of study is about to come into operation in Darmstadt where the ESR storage ring will

capture radioactive beams from fragmentation products and cool them to useful energies for reaction studies.

50024 (CONF-9007141–3) **Heavy ion transfer reactions: Status and prospects.** Betts, R.R. Argonne National Lab., IL (USA). [1990]. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From Workshop on heavy-ion collisions at energies near the Coulomb barrier; Daresbury (UK); 5-7 Jul 1990. Order Number DE90017692. Source: NTIS, PC A02/MF A01; OSTI; INIS; GPO Dep.

Some comments are addressed to the current status of and possible future directions for transfer reactions induced by heavy ions.

50025 (FEI–1958) **Collective bands in actinide nuclei and rare-earth elements in the SU(3) scheme.** Asherova, R.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst.); Smirnov, Yu.F.; Filippov, G.F. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst. 1989. 22p. (In Russian). Order Number DE91601123. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Spectra of low collective states of Th,U,Pu nuclei and some rare-earth elements are calculated in a simple phenomenological model with the three-parametric effective Hamiltonian constructed from generators of the SU(3) group. The SU(3) diagram is shown to permit to describe well the structure of ground and γ bands and their electromagnetic properties. 22 refs.; 1 fig.; 4 tabs.

50026 (IAE–4761-2) **Resonating-group method in calculations of low-energy reactions and n^4He scattering with realistic NN interactions.** Ehfros, V.D. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 8p. (In Russian). Order Number DE91601158. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

A review of an effective algebraic version of resonating-group method (RGM) in reactions with lightest nuclei is given. The dependence of RGM results of reaction fragment wave function choice is considered. Restrictions of the method and results of the non-model RGM-calculation of n^4He scattering with realistic NN-interactions are discussed. 22 refs.

50027 (IAE–4762-2) **Optimization of kinematically complete experiments in four-particle nuclear reactions by simulation method.** Mukha, I.G.; Chulkov, L.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 24p. (In Russian). Order Number DE91601219. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The Monte-Carlo simulation of kinematically complets experiments studying three-body decays of resonances formed in nuclear reactions are described. Calculation results of optimum conditions for the kinematically complete experiment studying exotic modes of three-particle ^6Be decay are given, which are characterized by strong correlations of decay products. 12 refs.; 10 figs.

50028 (IAE–4876-2) **Strength function of xenon 127 and cross section of $^{127}I(\nu_e, e^-)^{127}Xe$ reaction.** Lyutostanskij, Yu.S.; Shul'gina, N.B. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 12p. (In Russian). Order Number DE91601220. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The strenght functions $S_\beta(E)$ and the cross section of the reaction $\nu_e + ^{127}I \rightarrow e^- + ^{127}Xe$ were calculated in the framework of the theory of finite Fermi-systems. The results obtained are used to estimate the possibility of using an iodine-xenon detector in the experiments with solar neutrinos and reactor antineutrinos. The advantages of the iodine-xenon detector over the chlorine-argon one are shown. 13 refs.; 6 figs.; 3 tabs.

50029 (INS–816) **Spin dynamics of the itinerant helimagnet MnSi studied by positive muon spin relaxation.** Kadono, R. (Tokyo Univ. (Japan). Faculty of Science); Matsuzaki, T.; Yamazaki, T.; Kreitzman, S.R.; Brewer, J.H. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Mar 1990. 9p. Order Number DE90520206. Source: NTIS (US Sales Only), PC A02/MF A01.

The local magnetic fields and spin dynamics of the itinerant helimagnet MnSi($T_c \simeq 29.5$ K) have been studied experimentally using positive muon spin rotation/relaxation (μ^+SR) methods. In the ordered phase ($T < T_c$), zero-field μSR was used to measure the hyperfine fields at the muon sites as well as the muon spin-lattice relaxation time T_1^μ. Two magnetically inequivalent interstitial μ^+ sites were found with hyperfine coupling constants $A_{hf}^{(1)} = -3.94$ kOe/μ_B and $A_{hf}^{(2)} = -6.94$ kOe/μ_B, respectively. In the paramagnetic phase ($T > T_c$), the muon-nuclear spin double relaxation technique was used to simultaneously but independently determine the spin-lattice relaxation time T_1^{Mn} of ^{55}Mn spins and that of positive muons (T_1^μ) over a wide temperature range ($T_c < T \leq 150$ K). The temperature dependence of T_1^{Mn} and T_1^μ in both phases shows systematic deviations from the predictions of self-consistent renormalization (SCR) theory. (author).

50030 (INS–822) **Towards high-density matter with relativistic heavy-ion collisions.** Nagamiya, Shoji. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Apr 1990. 23p. Order Number DE90520259. Source: NTIS (US Sales Only), PC A03/MF A01.

Recent progress in nucleus-nucleus collisions at BNL and CERN suggests a hint that the formation of high-density nuclear matter could be possible with relativistic heavy-ion beams. What is the maximum density that can be achieved by heavy-ion collisions? Are there data which show evidence or hints on the formation of high density matter? Why is the research of high-density interesting? How about the future possibilities on this subject? These points are discussed. (author).

50031 (INS–828) **Nuclear spectroscopy and quantum chaos.** Sakata, Fumihiko; Marumori, Toshio; Hashimoto, Yukio; Yamamoto, Yoshifumi; Tsukuma, Hidehiko; Iwasawa, Kazuo. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. May 1990. 15p. Order Number DE90520335. Source: NTIS (US Sales Only), PC A03/MF A01.

In this paper, a recent development of INS-TSUKUBA joint research project on large-amplitude collective motion is summerized. The classical theory of nuclear collective dynamics formulated within the time-dependent Hartree-Fock theory is recapitulated and decisive role of the level crossing in the single-particle dynamics on the order-to-chaos transition of collective motion is discussed in detail. Extending the basic idea of the classical theory, we discuss a quantum theory of nuclear collective dynamics which allows us to properly define a concept of quantum chaos for each eigenfunction. By using numerical calculation, we illustrate what the quantum chaos for each eigenfunction means and its relation to usual definition based on the random matrix theory. (author).

50032 (ITEP–144-88) **Production of high energy nuclei ^4He,^3He,^3H,^2H in interaction 10.1 GeV/c protons with Be,Al,Cu,Ta.** Safronov, G.A. (and others); Smirnov, G.N.; Sibirtsev, A.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1988. 12p. Order Number DE91601160. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The yields of light fragments at 3.5 deg have been measured for proton nuclei reactions. Experimental data for alpha particle ^3He,^3H, deuteron production are discussed in terms of phenomenological coalescence model. 11 refs.; 4 figs.

50033 (ITP–88-158) **Threshold anomaly in doublet nd-scattering.** Shapoval, D.V.; Simenog, I.V. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1988. 24p. Order Number DE91601161. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The doublet nd-scattering amplitude behaviour near the three-particle threshold is studied analytically and numerically. The scattering amplitude possesses an anomaly caused by the small energy of singlet deuteron virtual level. The anomaly manifests itself as a bend in the energy dependence of the real part of the scattering phase shift in the range of about 0.5 MeV and in a non-standard behaviour of the break-up cross-section near the threshold. 26 refs.; 5 figs.; 2 tabs.

50034 (ITP–89-3) **Comparison of theoretical and phenomenological phase shifts for $^3He(\alpha,\alpha)^3He$ scattering at ^7Be excitation range between 25 and 42 MeV.** Ostashko, V.V.; Yasnogorodskij, A.M.; Filippov, G.F.; Vasilevskij, V.S.; Nesterov, A.V. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1989. 12p. Order Number DE91601162. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

New resonances of ^7Be at excitation energies about 30 MeV are discovered as the result of phase shift analysis of experimental data for $^3He+\alpha$ and ^3He-vector$+\alpha$ elastic scattering, in qualitative aggreement with microscopic calculations based on resonating group method. 11 refs.; 5 figs.

50035 (JINR–2-35-89, pp. 21-26) **Interference of the main diagrams of OPER-model for reaction $np \rightarrow np\,\pi^+\pi^-$ at energies 1-5 GeV.** Ierusalimov, A.P. (and others); Moroz, V.I.; Stel'makh, A.P. Joint Inst. for Nuclear Research, Dubna (USSR); Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation. 1989. (In Russian). In *JINR rapid communications: Collection.* Order Number DE90706214. Source: NTIS (US Sales Only), PC A04/MF A01; OSTI; INIS.

The interference effects are studied for the main diagrams of reggeized π-exchange model (OPER) of the reaction $np \rightarrow np\pi^+\pi^-$. It is shown that the interference effects must be taken into account at the incident momenta neutrons below 3 GeV/c. The contribution of the interference part is 23% at P_0=1.73 GeV/c for the cross section calculated by OPER-model. 6 refs.; 4 figs.

50036 (JINR–2-35-89, pp. 5-10) **Automodelity of proton cluster distributions in the range of the first intermediate asymptotics.** Kechechyan, A.O. (Erevanskij Fizicheskij Inst., Erevan (USSR)); Shakhbazyan, B.A. Joint Inst. for Nuclear Research, Dubna (USSR); Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1989. (In Russian). In *JINR rapid communications: Collection.* Order Number DE90706214. Source: NTIS (US Sales Only), PC A04/MF A01; OSTI; INIS.

Experimental results on proton cluster distributions over the relativistically-invariant quantity b_{all} from nC-and π^-C-interactions confirm the applicability of the automodelity principle of the second kind to our case. It was shown that in the range of the first intermediate asymptotics ($b_{all} >> 0.01$) these distributions can be well fitted by an exponential function at the exponent value $n \approx 4$. This value does not depend on b_k for $b_k < 0.05$ both for nC-and π^-C-interactions. 9 refs.; 3 figs.; 1 tab.

50037 (JINR–2-35-89, pp. 27-33) **Microscopic description of neutron and proton transition moments in spherical nuclei.** Nikolaeva, R.M. Joint Inst. for Nuclear Research, Dubna (USSR); Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1989. In *JINR rapid communications: Collection.* Order Number DE90706214. Source: NTIS (US Sales Only), PC A04/MF A01; OSTI; INIS.

Neutron and proton transition matrix elements for low-lying quadrupole transitions are calculated microscopically in the framework of the quasiparticle phonon nucleaar model in some spherical nuclei. For isoscalar states M_n and M_p are of the same value and sign, and for the isovector states they are predicted to be of the same value and opposite sign. The isoscalar and isovector states are differently excited in inelastic scattering of protons and deuterons. 13 refs.; 2 tabs.

50038 (JINR-E–2-89-37) **Polarization phenomena in reactions of deuteron stripping type.** Dolidze, M.G. (Tbilisskij Gosudarstvennyj Univ., Tbilisi (USSR)); Lykasov, G.I. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems. 1989. 4p. Order Number DE91601163. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

Submitted to Pis'ma Zh. Ehksp. Teor. Fiz.

A strong sensitivity of both the inclusive spectra of forward-going protons in the stripping reaction $dN \rightarrow pX$ and the tensor component of deuteron polarization T_{20} to the reaction mechanism is shown. The role of relativistic effects at the deuteron decay into two nucleons is discussed in the analysis of T_{20}. 15 refs.; 2 figs.

50039 (JINR-E–4-89-51) **The multiphonon version of the quasiparticle-phonon nuclear model: application to the problem of existence of low-lying two-phonon states in deformed nuclei.** Nesterenko, V.O. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1989. 18p. Order Number DE91601126. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Submitted to Nucl. Phys., A.

The multiphonon version of the quasiparticle-phonon nuclear model (QPNM) conventient for an analysis of an interaction between configurations with a different number of phonons is proposed. The properties of the matrix elements coupling these configurations are discussed in detail. It is shown that if violation of the Pauli principle shifts the strengths of low-lying two-phonon states towards higher excitation energies, the interaction with complex configurations (three-phonon, etc.) provides the opposite effect of the same order. As a result, the multiphonon version of the QPNM admits the existence of low-lying two-phonon states in deformed nuclei thus removing the discrepancy between the QPNM and other microscopic models. 16 refs.; 1 fig.; 2 tabs.

50040 (JINR-E–4-89-165) **Neutron-proton ratios of collective quadrupole matrix elements in even Fe and Cr isotopes.** Antalik, R. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1989. 10p. Order Number DE91601124. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

Submitted to Mod. Phys. Lett. A.

M_n/M_p ratios are investigated within the QRPA framework for the low-lying quadrupole states and for isoscalar giant quadrupole resonances in $^{54,56,58}Fe$ and $^{50,52,54}Cr$. Theoretical results for 2_1^+ states are in good agreement with empirical ones obtained from recent proton and pion inelastic scattering studies. 16 refs.; 3 tabs.

50041 (JINR-E–4-89-211) **Description of low-lying vibrational $K^\pi \neq 0^+$ states of deformed nuclei in the quasiparticle-phonon nuclear model.** Solov'ev, V.G.; Shirikova, N.Yu. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1989. 35p. Order Number DE91601125. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Submitted to Z. Phys., A.

The QPNM equations are derived taking account of p-h and p-p interactions. The calculated quadrupole, octupole and hexadecapole vibrational states in ^{168}Er, ^{172}Yb and ^{178}Hf are found to be reasonale agreement with experimental data. It is shown that distribution of the $E\lambda$ strength in some deformed nuclei differs from the standard one. There are cases when for a given K^π and $E\lambda$ strength is concentrated not on the first but on higher-lying states. The assertion made earlier about the absence of collective two-phonon states in deformed nuclei is confirmed. 44 refs.; 1 fig.; 6 tabs.

50042 (JINR-R–1-89-47) **Search for strangeness-abundant quark-gluon matter in nucleus-nucleus and antiproton-nucleus interactions.** Okonov, Eh.O. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1989. 14p. (In Russian). Order Number DE91601164. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Peculiarities of the strangeness production process in nuclei are considered as a useful tool for studies of the excited states of hadron matter and for a search for signals of phase transition in quark-gluon matter (quagma). The experimental data are analyzed to compare nucleus-nucleus (A_PA_T) and antiproton-nucleus interactions in which there is an indication of the thermalization of hadron matter as the necessary condition for quagma formation. Angular distributions of produced Λ-hyperons appeared to be close to isotropic ones in the CM system of nucleonic cluster N_P+(10-15)N_T. In p-barA interactions one cannot expect large baryonic densities therefore the strangeness abundance does not provide a good signal for quagma formations and this phase transition requires considerably higher temperatures. On the other hand, in central A_PA_T collisions the number of thermalized clusters and, consequently, the magnitude of expected effects can be much more larger due to a larger number of interacting nucleons of the nucleus A_P. 27 refs.; 9 figs.; 1 tab.

50043 (KIFVE–87-19) **On the strange particle production in the nuclear pionization model.** Ameev, S.Sh.; Tulegenov, M.Sh.; Shmonin, V.L. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. 23p. (In Russian). Order Number DE91601167. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The process of K^+-meson production in reactions Ne+NaF and Ne+Pb at the energy of T_0=2.1 GeV/n is considered within the framework of the nuclear pionization model. It is shown that the model's calculations are in satisfactory agreement with experiments. The magnitude is determined for correlation radius restricting the space region where the strange particle pair production is localized with the strangeness preservation. 18 refs.; 5 figs.

50044 (KIFVE–88-08, pp. 3-9) **K^--meson production in relativistic nuclear collisions and nuclear pionization model.** Tulegenov, M.Sh. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. (In Russian). In *Proceedings of the seminar of young scientists HEPI AN Kaz SSR. Part 1: 1. High energy physics and computer technique.* Order Number DE90706215. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Formation of K^--mesons in reaction Si+Si at energy 2.1 GeV/nucleon is discussed in the framework of the nuclear pionization model (NPM). According to NPM, three excited thermodynamic systems: a central pionized cluster (CPC) and two baryons in the regions of fragmentation of a charge and a target, are formed in collision of relativistic nuclei. Thermodynamic decay of CPC which is the source of most of produced particles is considered. At initial energies of several GeV/nucleon, the number of strange particles producing is small, that's why it is necessary to take into account the local character of their pair production. The volume, where strange particle pair production is localized, is proportional to the cube of correlation radius R_{cor}= 1.1 Fm. Nucleons, Δ-resonances, Λ- and Σ-hyperons, kaons and pions are considered as components of CPC decay state. CPC decay characteristics are determined by the set of equations proceeding from the laws of conservation under conditions of chemical equilibrium at a given decay density. It is shown that K^--mesons possessing large cross section of absorption are produced together with pions at relatively late stage of CPC widening. 9 refs.; 1 fig.

50045 (KIFVE–88-08, pp. 10-16) **Partial inelasticity coefficients in hadron-nucleus interactions.** Temiraliev, A.T. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

It is shown that weak dependence of the coefficients of inelasticity of hadron-nuclear interactions on the mass number of a nucleus-target can be interpreted in the framework of additive quark model of multiple processes if taking into account the jet character of these processes to estimate exactly the mean quark energy captured by quark spectators from jets. 7 refs.

50046 (KIFVE–88-08, pp. 17-24) **Simulation of angle interval distribution in collisions of relativistic nuclei and comparison with experiment.** Prilepskij, Yu.B. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. (In Russian). In *Proceedings of the seminar of young scientists HEPI AN Kaz SSR. Part 1: 1. High energy physics and computer technique.* Order Number DE90706215. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Formation of proton groups from a target nucleus in the azimuthal plane, when interacting heavy nuclei of cosmic rays with heavy nuclei of photoemulsion, is investigated. Distribution of intervals of angles between tracks according to the model of independent particle escape, which is further compared with the same distribution obtained in experiment. It is shown that development in the experiment of two-maximal distribution of intervals is not the result of random fluctuations of isotropic distribution of particles in the azimuth, but is the evidence in favour of the supposition about the presence of baryon jets in the process of multiple production in AA-collisions. 8 refs.; 2 figs.

50047 (KIFVE–88-12) **Determination of number of interacting nucleons in the nuclear pionization model.** Ameev, S.Sh.; Tulegenov, M.Sh.; Shmonin, V.L. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. 40p. (In Russian). Order Number DE91601171. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

In a model of nuclear pionization the collision of relativistic nuclei occurs by means of formation and decay of three intermediate thermodynamic systems. The central pionized cluster (CPC) is formed by gluon fields of interacting nucleons. Their valence quarks, being relatively passive, pass through the region of interaction and they form two baryon clusters (BC) in the region of fragmentation of charge and target CPC is the main source of secondary particles and BS decays, mainly, to nucleons. Interaction of BC at the outlet from a nucleus with nucleons of the same nucleus occurs at the second stage of the process. The basic leading system (LS) without a soft part of a parton spectrum interacts relatively weak with nucleon of nucleus-partner because in the system of its staying LS residence time in the passive state extended by γ-factor relatively to nuclei motion. As for as BC yields from its nucleus it interacts with nucleons taking no part in forming CPC. The calculation results of the model of nuclear pionization with a total number of interacting nucleons agree satisfactory with the present experimental data. It is shown that account of interactions at the second stage of the process becomes essential with the growth of the atomic number of the target nucleus. Comparison with calculations of one of the versions of the Glauber model for AA-collisions is carried out. 23 refs.; 9 figs.; 2 tabs.

50048 (N–90-24121) **Chiral interface at the finite temperature transition point of QCD.** Frei, Z.; Patkos, A. Fermi National Accelerator Lab., Batavia, IL (USA). May 1990. 13p. (NASA-CR–186605;NAS–1.26:186605;FERMILAB-PUB–90/114-A). Source: NTIS, PC A03/MF A01.

The domain wall between coexisting chirally symmetric and broken symmetry regions is studied in a saddle point approximation to the effective three-flavor sigma model. In the chiral limit the surface tension varies in the range ((40 to -50)MeV)(exp 3). The width of the domain wall is estimated to be approximately or equal to 4.5 fm.

50049 (RCNP-P–107, pp. 121-128) **Inelastic proton scattering from deformed nuclei at intermediate energy.** Kamigaito, Osamu (Kyoto Univ. (Japan). Dept. of Physics). Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics. Nov 1989. (In Japanese). (CONF-8903211–: Workshop on cyclotron cascade project, Ibaraki (Japan), 13-15 Mar 1989). In *Proceedings of the workshop on 'cyclotron cascade project'.* Order Number DE90777870. Source: NTIS (US Sales Only), PC A11/MF A01.

Relativistic research on nuclear reactions and nuclear structures has become an important area in recent nuclear physics. The present article briefly reviews recent analyses carried out by means of the relativistic coupled-channels formalism. Major applications of the coupled-channels approach to inelastic scattering are outlined and some possible experiments that could be performed at RCNP are discussed. A coupled-channels equation is derived from the Dirac's formula which describes the scattering of protons. Studies cited include calculations of elastic and inelastic scattering made by a Dirac-type coupled-channels equation, those by a Dirac-based Schroedinger-type coupled channels equation, analysis of elastic and inelastic scattering to the rotational band in the ground state of ^{24}Mg made by Dirac-type and Schroedinger-type equations. Effects of the structural irregularity may be significant in the case of light deformed nuclei such as ^{24}Mg. Grand Raiden, a high-resolution spectrograph to be constructed at RCNP will help measure the inelastic scattering of some rare earth nuclei. (N.K.).

50050 (RCNP-P–108, pp. 52-60) **Pair correlation of superdeformed rotation band.** Shimizu, Yoshio (Kyushu Univ., Fukuoka (Japan). Faculty of Science). Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics. Nov 1989. (In Japanese). (CONF-8908235–: Workshop on nuclear structure by gamma spectroscopy, Ibaraki (Japan), 31 Aug - 2 sep 1989). In *Proceedings of the workshop on nuclear structure by gamma spectroscopy.* Order Number DE90798857. Source: NTIS (US Sales Only), PC A09/MF A01.

The effect of pair correlation, one of the most important residual interactions associated with the super-deformed rotation band, is discussed in terms of the characteristics of the rotation band (its effect on the moment of inertia in particular), and the tunneling into an normal deformed state in relation to its effect on the angular momentum dependence of the potential energy plane as a function of the deformation. The characteristics of the rotation band is discussed in terms of the kinematic and dynamic momenta of inertia. It is shown that the pair correlation in a super-deformed rotation band acts to decrease the former and increase the latter momentum mainly due to dynamic pair correlation. A theoretical approach that takes this effect into account can provide results that are consistent with measured momenta, although large differences can occur in some cases. Major conflicts include a large measured kinetic momentum of inertia compared to the theoretical value, and the absence of the abnormality (shape increase) generally seen in low-spin experiments. The former seems likely to be associated with the method of measuring the angular momentum. (N.K.).

50052 (CONF-900970–3) **Computation of standard deviations in eigenvalue calculations.** Gelbard, E.M. (Argonne National Lab., IL (USA)); Prael, R. Argonne National Lab., IL (USA). [1990]. 10p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract W-31109-ENG-38. From International conference on Monte Carlo methods in neutron and photon transport; Budapest (Hungary); 25-28 Sep 1990. Order Number DE90017809. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Brissenden proposes a modified Monte Carlo method for eigenvalue calculations, designed to decrease biases in the flux and eigenvalue estimates, and in corresponding estimates of standard deviations. The proposed method is based on the generation of "superhistories," chains of histories run in sequence without intervening renormalization of the fission source. This method appears to have some disadvantages, discussed in another paper of this conference, e.g., first, the new method requires substantial changes in existing codes and second, it may increase variances in computations where long superhistory chains are needed. In PWR's, for example, dominance ratios $\gtrsim$0.95 are not unusual, and it seems likely that chains of length 10 will, in such cases, still be strongly correlated. Earlier numerical experiments suggest that biases in fluxes and eigenvalues are negligibly small, even for very small numbers of histories per generation. Now more recent experiments, run on the CRAY-XMP, tend to confirm these earlier conclusions. The new experiments discussed in this paper involve the solution of one-group 1D diffusion theory eigenvalue problems, in difference form, via Monte Carlo. Experiments covered a range of dominance ratios from $\approx$0.75 to $\approx$0.985. In all cases flux and eigenvalue biases were substantially smaller than one standard deviation.

50053 (CONF-901121–6) **On the adequacy of message-passing parallel supercomputers for solving neutron transport problems.** Azmy, Y.Y. Oak Ridge National Lab., TN (USA). [1990]. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From Association for Computing Machinery/Institute of Electrical and Electronics Engineers supercomputing conference; New York, NY (USA); 12-16 Nov 1990. Order Number DE90016041. Source: NTIS, PC A02/MF A01; OSTI; INIS.

A coarse-grained, static-scheduling parallelization of the standard iterative scheme used for solving the discrete-ordinates approximation of the neutron transport equation is described. The parallel algorithm is based on a decomposition of the angular domain along the discrete ordinates, thus naturally producing a set of completely uncoupled systems of equations in each iteration. Implementation of the parallel code on Intel's iPSC/2 hypercube, and solutions to test problems are presented as evidence of the high speedup and efficiency of the parallel code. The performance of the parallel code on the iPSC/2 is analyzed, and a model for the CPU time as a function of the problem size (order of angular quadrature) and the number of participating processors is developed and validated against measured CPU times. The performance model is used to speculate on the potential of massively parallel computers for significantly speeding up real-life transport calculations at acceptable efficiencies. We conclude that parallel computers with a few hundred processors are capable of producing large speedups at very high efficiencies in very large three-dimensional problems. 10 refs., 8 figs.

50054 (IAE–4774-5) **FORTUN-88 physical module for calculation by Monte-Carlo method with microconstants on the estimated data file basis.** Markovskij, D.V.; Borisov, A.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 27p. (In Russian). Order Number DE91601115. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The physical module for treatment of neutron collision in the fast region, adapted to the MCU package of applied codes, is described. The method is oriented to detailed processes in the fast energy range and is a combination of the group approach in representation of process probabilities and elastic scattering anisotropy and individual description of the inelastic process secondary neutron spectra based on the evaluated data files. 9 refs.; 3 tabs.

50055 (IFUSP-P–839) **Manual for target thickness measurement by alpha particle irradiation.** Dias, J.F.; Martins, M.N. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Apr 1990. 15p. (In Portuguese). Order Number DE91601118. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

A system is described for thin-target thickness measurement through the alpha particle energy loss when them traverse the target. It is also described the program used in the analysis of the target thickness. (L.C.).

50056 (INDC(CCP)–314) **The neutron leakage spectrum for an iron sphere with a central 14 MeV neutron source.** Borisov, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii); Zagryadskij, V.A.; Chuvilin, D.Yu.; Kralik, M.; Pulpan, Ya.; Tikhy, M. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. May 1990. 13p. Translated by the IAEA from the Russian report IAE-4990/8, Moscow 1989. Order Number DE91601116. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Translated by the IAEA from the Russian report IAE-4990/8, Moscow 1989.

In this paper we present the experimental results and their comparison with calculations of the neutron leakage spectrum for an iron sphere with a wall thickness of 7.5 cm in the 1-15 MeV region. The measurements were performed with a scintillation spectrometer. 15 refs, 4 figs, 6 tabs.

50057 (KIFVE–88-09, pp. 26-31) **Calculation of energy release depth distributions for electrons with 5-100 MeV energy in thick targets.** Zavgorodnij, S.F. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. (In Russian). In *Proceedings of the seminar of young scientists HEPI AN Kaz SSR. Part 2: 2. Solid state physics and mass transfer simulation.* Order Number DE90706213. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Calculations of energy release in Al, Cu, Pb targets irradiated usually by incidence electrons with energies 5, 10, 25, 50, 100 MeV are presented by the Monte Carlo method according to the diagram of enlarged collisions. Distributions in depth of energy release of primary electrons and secondary particles, which average number of generation increases smoothly with the growth of the energy of primary electrons and the atomic number of the target are obtained. It is shown that secondary particles form a localized

band of energy release, which shifts to the target depth with the increase of the primary electron energy and which increases the contribution to total distribution. 7 refs.; 2 figs.

50058 (KIFVE–88-09, pp. 32-38) **Application range of the impulse approximation at calculation of ion transport in matter.** Fajn, V.Eh. (Kazakhskij Gosudarstvennyj Univ., Alma-Ata (USSR)); Yuldashev, M.M.; Chubisov, M.A. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. (In Russian). In *Proceedings of the seminar of young scientists HEPI AN Kaz SSR. Part 2: 2. Solid state physics and mass transfer simulation.* Order Number DE90706213. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The problem on ion transport in the amorphous substance is discussed. The region of applicability of pulse approximation when calculating ion transort in the substance is considered. The results obtained permit to obtain reliable integral and differential energy-angular characteristics when simulating ion scattering in the amorphous substance. 8 refs.; 2 figs.

50059 (KIFVE–88-09, pp. 39-44) **About applicability of binary collisions model in the theory of ion transport in matter.** Khlupin, S.I. AN Kazakhskoj SSR, Alma-Ata (USSR). Inst. Fiziki Vysokikh Ehnergij. 1988. (In Russian). In *Proceedings of the seminar of young scientists HEPI AN Kaz SSR. Part 2: 2. Solid state physics and mass transfer simulation.* Order Number DE90706213. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The theory of ion transport in a substance is discussed in the framework of binary collisions. Approximation of binary collisions is based on a classical description of ion and atomic electron collision, and it is a case of plane-wave Born approximation. The results of calculation according to the model given, when using the Gryzinskij model of cross sections of C, Si and Ag atom ionization with protons are presented.

50060 (LA-UR–90-2514) **Monte Carlo next-event estimates from thermal collisions.** Hendricks, J.S.; Prael, R.E. Los Alamos National Lab., NM (USA). [1990]. 5p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-901101–21: American Nuclear Society winter meeting, Washington, DC (USA), 11-15 Nov 1990). Order Number DE90014896. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

A new approximate method has been developed by Richard E. Prael to allow S(α,β) thermal collision contributions to next-event estimators in Monte Carlo calculations. The new technique is generally applicable to next-event estimator contributions from any discrete probability distribution. The method has been incorporated into Version 4 of the production Monte Carlo neutron and photon radiation transport code MCNP. 9 refs.

50061 (BARC–1483) **Pre-operational external radiation monitoring in NAPP environs using TLDs (Jan 1987 - Mar 1989).** Basu, A.S. (Bhabha Atomic Research Centre, Bombay (India). Health Physics Div.); Sharma, L.N.; Nambi, K.S.V. Bhabha Atomic Research Centre, Bombay (India). 1989. 16p. Order Number DE91601980. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Assessment of environmental impact due to operation of a nuclear power plant requires the knowledge of the pre-operational baseline natural radiation levels around the plant. With this objective in view, environmental TLDs are placed in about twenty locations around the plant in different directions and distances. This report presents quarterly exposure data during the period Jana.'87-Mar.'89. The salient results are: (1) The distributions of quarterly rates of exposure in most of the places are unimodal on a lognormal plot; (2) the natural background radiation level typical for NAPP site based on these locations works out to be 142 ± 30(1σ)mR/year. Such a value is expected because of the Gangetic alluvial terrains carrying significant primordial radioactivity. (author). 4 figs., 6 refs., 1 tab.

50062 (BARC–1492) **A study of radon variation in dwelling during 1988.** Shaikh, A.N. (Bhabha Atomic Research Centre, Bombay (India). Pollution Monitoring Section); Ramachandran, T.V.; Muraleedharan, T.S.; Subbaramu, M.C. Bhabha Atomic Research Centre, Bombay (India). 1989. 19p. Order Number DE91601981. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Natural radioactivity due to radon and its progeny levels indoors contributes significantly to the total radiation to man. The main source of radon and its progeny in a dwelling is the emanation of radon gas from soil. The temperature and ventilation vary in a dwelling during the year. These parameters influence the indoor radon levels. The seasonal variation of radon was studied in a dwelling as well as in the outside air. The filter paper method and alpha counting, and the solid state track detector technique and track counting were used to study the radon levels. The geometric mean of radon daughters concentrations were 0.5 mWL and 0.8 mWL measured by filter-paper method and SSNTD method respectively. The geometric mean of radon concentrations were 6.2 Bqm^{-3} and 10.0 Bqm^{-3} by filter-paper method and SSNTD method respectively. (author). 3 figs., 3 tabs., 13 refs.

50063 (CONF-901067–1) **Radiation protection of the public: Past, present, and future.** Kocher, D.C. Oak Ridge National Lab., TN (USA). [1990]. 18p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From Symposium on environmental radiation and public policy; Las Vegas, NV (USA); 23-25 Oct 1990. Order Number DE90017747. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

This paper discusses the historical development of radiation protection standards for the public, the present system in the United States for limiting radiation exposures of the public primarily by means of environmental radiation standards for specific practices or sources, and recent developments that may affect future standards and policies for radiation protection of the public. The radiobiological and epidemiological basis for radiation protection standards and policies is emphasized. Difficulties associated with the current regulatory framework are discussed, and proposal for addressing these difficulties are presented. 16 refs., 1 tab.

50064 **Calibration of detector sensitivity in positron cameras.** Chesler, D.A. (Massachusetts General Hospital, Boston, MA (USA). Physics Research Lab.); Stearns, C.W. *IEEE Transactions on Nuclear Science (Institute of Electrical and Electronics Engineers) (USA)*, 37(2): 768-772 (Apr 1990). (CONF-900143–: Institute for Electronic and Electrical Engineers (IEEE) nuclear science symposium, San Francisco, CA (USA), 15-19 Jan 1990).

An improved method for calibrating detector sensitivities in a positron camera has been developed. The calibration phantom is a cylinder of activity placed near the center of the camera and fully within the field of view. The calibration data is processed in such a manner that the following two important properties are achieved. The estimate of a detector sensitivity is unaffected by the sensitivities of the other detectors. The estimates are insensitive to displacements of the calibrating phantom from the camera center. Both of these properties produce a more accurate detector calibration.

Translated from Bulletin of the Japan Institute of Metals, 1986, v.25(7) p. 608-614. Source: Available from The British Library Document Supply Centre, Boston Spa, Wetherby, West Yorks. LS23 7BQ.

Translated from Bulletin of the Japan Institute of Metals, 1986, v.25(7) p. 608-614.

Two techniques involving ion beam sputtering are discussed in relation to their application to diffusion research in cases where the diffusion coefficient is very low. The first of these combines microsectioning by means of ion beam sputtering with a radioactive tracer. Examples given of research using this technique are: self

diffusion in single crystals of α-Zr; self diffusion in amorphous metals; temperature and pressure dependence of the self diffusion coefficient in single crystals of Au at low temperatures and in Ge single crystals. The second technique is secondary ion mass spectroscopy (SIMS) depth direction analysis. Recent research using SIMS has included the diffusion of Co impurities in single crystals of Cu and Ge impurity diffusion in Si single crystals. These researches could not have been carried out effectively, or in some cases at all, by means of more conventional techniques. (UK).

50066 (CBPF-MO-001/89, pp. 229-277) **Electronic origins of NMR parameters.** Contreras, R.H. (Buenos Aires Univ. (Argentina). Dept. de Fisica); Giribet, C.G.; Azua, M.C.R. de. Centro Brasileiro de Pesquisas Fisicas (CBPF), Rio de Janeiro, RJ (Brazil). 1988. (In Spanish). (CONF-8809500--: 1. State Meeting of New Materials, Rio de Janeiro (Brazil), 26-28 Sep 1988). In *6. Latin American School on Theoretical Chemistry. v. 1.* Source: Available from the Library of the Comissao Nacional de Energia Nuclear, RJ, Brazil.

The Nuclear Magnetic Resonance (NMR) spectroscopy is a powerful tool for the understanding of many theoretical aspects of molecular physics. In this work, many of these aspects as well as its applications will be discussed. (A.C.A.S.).

50067 (CBPF-NF-006/89) **EPR studies of photolysis of HbNO at low temperatures.** Linhares, M.P.; El-Jaick, L.J.; Bemski, G.; Wajnberg, E. Centro Brasileiro de Pesquisas Fisicas (CBPF), Rio de Janeiro, RJ (Brazil). 1989. 31p. Order Number DE91600635. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Photolysis of HbNO has been studies below 20K by electron spin ressonance at continuous illumination. Non exponential kinetics of both dissociation and reassociation of NO have yielded a consistent picture of NO tunneling to probably more than one site distant less than 0.1nm from the bound position. This result is obtained using the model of conformation substates or a model of a sum of two exponentials. (author).

50068 (CONF-900914--1) **Surface anharmonicity: Temperature dependence of phonon energies on Cu(110).** Baddorf, A.P. (Oak Ridge National Lab., TN (USA)); Plummer, E.W. Oak Ridge National Lab., TN (USA). [1990]. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. Grant DMR-85-19059;Grant DMR-85-10491. From Vibrations at surfaces; Shelter Island, NY (USA); 10-14 Sep 1990. Order Number DE90017735. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The temperature dependence of surface phonons on Cu(110) has been determined with high resolution electron energy loss spectroscopy between 21 and 766 K. Phonons at $\bar{\Gamma}$ and at $\bar{Y}$, both with atomic motion perpendicular to the surface, have been examined to assess the importance of anharmonicity at the surface. As the temperature is increased the observed phonon energies decrease and the linewidths increase. The same percentage decrease is observed at $\bar{\Gamma}$ and $\bar{Y}$. A simple model using an anharmonic potential can reproduce the magnitude and shape of the temperature dependence of the phonon at $\bar{\Gamma}$. Direct comparison with bulk phonon studies shows that the anharmonicity at the surface is 4.1–4.8 times greater. 18 refs., 5 figs.

50069 (CONF-900936--4) **High energy iron ion implantation into sapphire.** Allen, W.R.; Pedraza, D.F. Oak Ridge National Lab., TN (USA). [1990]. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 7. international conference on ion beam modification of materials; Knoxville, TN (USA); 9-14 Sep 1990. Order Number DE90017736. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Sapphire specimens of c-axis orientation were implanted at room temperature with iron ions at energies of 1.2 and of 2 MeV to various fluences up to 8×10^{16} cm^{-2}. The damage induced by the implantations was assessed by Rutherford backscattering spectroscopy in random and channeling geometries. Dechanneling in both sublattices was observed to saturate for all implantation conditions. Disorder in the aluminum sublattice was found to increase with depth at a significantly slower rate than in the oxygen sublattice. In the oxygen sublattice, a relative yield, χ, of 0.80 $\pm$ 0.11 was attained at a depth of 0.1 μm and remained constant up to the measured depth of 0.45 μm. In the aluminum sublattice, the disorder increased with depth and the dechanneling asymptotically approached χ=0.70 $\pm$ 0.04 at 0.45 μm. These results are discussed and compared with those for shallower Fe implantations obtained by other researchers.

50070 (IAE-4727-1) **Plane channeling and radiation of ultrarelativistic electrons in thick crystals.** Starostin, V.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1988. 5p. (In Russian). Order Number DE91600711. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

A theory of passing fast charged particles through single crystals with defects of any origin is built. An optimal thickness at which the radiation output is maximal is found: $0.854/\mu(E_\gamma)$. 11 refs.

50071 (IFUSP-P-827) **Luminescence study of spodumene.** Isotani, S. (Sao Paulo Univ., SP (Brazil). Inst. de Fisica); Fujii, A.T.; Antonini, R.; Pontuschka, W.M.; Rabani, S.R.; Furtado, W.W. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Feb 1990. 22p. Order Number DE91600636. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

A comparative study is made of the luminescence of five kinds of spodumene from Minas Gerais, Brazil, studied previously by optical absorption spectroscopy. Natural gemstones are used which, in the course of the experiments, were irradiated with X-rays. (L.C.).

50072 (INS-820) **Application of in-beam perturbed angular distribution to the study of high-T_c oxides.** Komori, Fumio (Tokyo Univ. (Japan). Dept. of Physics); Katsumoto, Shingo; Kobayashi, Shun-ichi; Ikehata, Seiichiro; Ikeda, Nobuo; Hashimoto, Osamu; Fukuda, Tomokazu; Nomura, Toru; Yamazaki, Toshimitsu. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Apr 1990. 10p. Order Number DE90520227. Source: NTIS (US Sales Only), PC A02/MF A01.

The time differential perturbed angular distribution method was applied to the study of high-T_c oxides. Spin rotation signals of the ^{19}F isomer (τ = 128 nsec) produced from oxygen nuclei via ^{16}O(α,p)^{19}F were observed in various high-T_c oxides above T_c. The internal field was determined with the accuracy of about 1%. This method is an alternative to the ^{17}O substituted NMR. (author).

50073 (IPNO-DRE-89-25) **Laser spectroscopy of laser-desorbed gold isotopes.** Le Blanc, F. (Paris-11 Univ., 91 - Orsay (FR). Inst. de Physique Nucleaire); Kilcher, P.; Obert, J.; Oms, J.; Putaux, J.C.; Roussiere, B.; Sauvage, J.; Duong, H.T.; Pinard, J.; Liberman, S.; Savard, G.; Crawford, J.E.; Lee, J.K.P.; Thekkadath, G. ISOCELE Collaboration. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1989. 20p. Order Number DE91700562. Source: NTIS (US Sales Only), PC A03/MF A01.

Changes in mean-square charge radius $\delta\langle r^2\rangle$, and magnetic dipole moments μ_I have been measured for a series of neutron-deficient gold isotopes between A=186 and 196, and for neutron-rich ^{198}Au and ^{199}Au, using the PILIS system on-line with the ISOCELE mass separator. These measurements confirm the existence of the shape transition between A=186 and 187. The measured μ_I values have been compared with calculations using Nilsson, and Symmetric Rotor+Quasiparticle models. The results are consistent with the interpretation that ^{186}Au is prolate, and that the heavier isotopes have oblate, or possibly triaxial deformation.

50074 (IS-M-634) **NMR [nuclear magnetic resonance] studies of hydrogen in metals and hydrides at very high temperatures.** Barnes, R. (Ames Lab., IA (USA)). Iowa State Univ. of Science and Technology, Ames, IA (USA). [1988]. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-82. (CONF-880969--12: International symposium on metal-hydrogen systems, fundamentals and applications, Stuttgart (Germany, F.R.), 4-9 Sep 1988). Order Number DE90016712. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The results of nuclear magnetic resonance (NMR) studies at very high temperatures (up to 1000°C) on two classes of hydrogen-containing metallic systems – the Group III and IV transition metal dihydrides and the Group III and V metal solid solution phases – are summarized. Anomalous behavior of the nuclear spin-lattice relaxation rate has been found in all these systems at

temperatures above ~600 K. Various possible origins of the anomaly are reviewed, and its similarity to behavior found in fast-ion conductors is noted. 14 refs., 5 figs., 1 tab.

50075 (IS-M–639) **Nuclear magnetic resonance survey of hydrogen motion and electronic structure in α-phase (Nb-Mo)-H alloys.** Ibanez-Meier, R. (Ames Lab., IA (USA)); Torgeson, D.R.; Barnes, R.G. Ames Lab., IA (USA). [1990]. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-82. (CONF-9009141–4: International symposium on metal-hydrogen systems, Banff (Canada), 2-7 Sep 1990). Order Number DE90018044. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The results of a proton nuclear magnetic resonance (NMR) survey of hydrogen motion and electronic structure in the solid solution (α) phase of niobium rich $Nb_{1-y}Mo_yH_x$ alloys are reported ($y \leq 0.2$, $x \leq 0.2$). Measurements of the temperature dependence of the proton spin-lattice relaxation time T_1 over the range $20 \leq T \leq 800$ K were analyzed to yield values of the activation energy E_a and jump attempt frequency ν_0 for hydrogen diffusive hopping and of the product $T_{1e}T = C_e$ indicative of the electronic density-of-states at the Fermi level, $N(E_F)$, where T_{1e} is that contribution to T_1. The T_1 vs T behavior shows features characteristic of hydrogen in random alloys, reflecting a distribution of E_a and ν_0 values. At high temperatures (~500 K), T_1 exhibits anomalous behavior, passing through a maximum and decreasing again at higher temperatures in the same manner found in the Nb–H and (Nb–V)-H systems. 10 refs., 2 figs.

50076 (IS-M–640) **Novel measurements of nuclear spin cross-relaxation in metal hydrides.** Baker, D.B. (Washington Univ., St. Louis, MO (USA). Dept. of Physics); Conradi, M.S.; Norberg, R.E.; Torgeson, D.R.; Barnes, R.G. Ames Lab., IA (USA). [1990]. 19p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-82. (CONF-9009141–5: International symposium on metal-hydrogen systems, Banff (Canada), 2-7 Sep 1990). Order Number DE90018042. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

Recent NMR measurements of proton relaxation have shown an unexpected frequency dependence in several metal-hydrogen systems at low temperatures. An explanation proposed by the Ames group involves cross-relaxation of protons to quadrupolar metal nuclei. We test this hypothesis with relaxation experiments involving large amplitude field modulation. The field modulation sweeps the proton resonance through the distribution of metal frequencies. Thus, the protons come into contact with more metal nuclei, increasing the proton relaxation rate. Relaxation measurements have been performed on several samples and the proton resonance frequency, the modulation frequency, and the modulation amplitude have been varied. Also to be reported are T_1 measurements on slowly spinning samples; the rotation produces periodic variations of metal quadrupolar frequencies.

50077 (IYaF–89-49) **On the electronic structure of high temperature superconductors: Nonalloyed CuOsub 2 plane.** Sushkov, O.P.; Flambaum, V.V. AN SSSR, Novosibirsk (USSR). Inst. Yadernoj Fiziki. 1989. 15p. (In Russian). Order Number DE91600641. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The value of screened coulomb repulsion of copper 3d-electrons and oxygen 2p-electrons is calculated. With respect to the crystal field and correlation effects the spectrum of electron states in nonalloyed samples is found. It is shown that the correlation effects greatly increase the splitting of 2p-orbitals of oxygen. Evidently, the presence of the second oxygen peak in photoionization spectra located 4-5 eV deeper than the main one, is connected with this. The structure of the electron state of the alloyed sample greatly depends on the presence of this splitting. 15 refs.; 1 fig.

50078 (JINR–14-89-462) **Experimental studies of effect of high current pulse electron and carbon ion beams on high temperature Y-Ba-Cu-O, Bi-Ca-Sr-Cu-O superconductors.** Korenev, S.A.; Altynov, V.A.; Sikolenko, V.V.; Chernakova, A. Joint Inst. for Nuclear Research, Dubna (USSR). 1989. 15p. (In Russian). Order Number DE91600712. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Submitted to Sverkhprovodimost': Fiz., Khim., Tekh.

This work shows the results of the experiment on the effect of high current electron and carbon ion pulse beams irradiation on high-T_c superconductors Y-Ba-Cu-O and Bi-Ca-Sr-Cu-O in vacuum ($P \approx 5 \times 10^{-5}$ torr). The parameters of electron beam used in the experiment were: $E \approx 100$-300 keV, $j_e \approx 10$-1000 A/cm^2, $\tau_p \approx 300$ ns. The parameters of carbon ions used in the experiment were: $E \approx 100$-300 keV, $j_i \approx 1$-60A/cm^2, $\tau_p \approx 300$ns. The methods of irradiation and studies of bulk high-T_c superconductors characteristics are described. Pulse methods of critical current measurement were improved. Experiments had shown the threshold electron beam power density for surface melting in adiabatic heat condition for Y-Ba-Cu-O ceramics up to $P_0 \geq 10^7$ W/cm^2, and for Bi-Ca-Sr-Cu-O ceramics up to P_0 >or approx.4×10^6W/cm^2. Increasing of critical current in 2 times was observed in samples with a melting surface layer. The integral resistance of Y-Ba-Cu-O and Bi-Ca-Sr-Cu-O decreased in 2-2.5 times for electron beams irradiated samples and in 1.25-1.8 times for ion irradiated samples. Amorphization did not take place and stoichiometry remained after such irradiation. 13 refs.; 10 figs.; 4 tabs.

50079 (JINR-E–14-89-128) **Muon spin relaxation study of protonic superionic conductor $CsHSO_4$.** Belushkin, A.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics); Cox, S.F.J.; Eaton, G.H.; Scott, C.A.; Shuvalov, L.A. Rutherford Appleton Lab., Chilton (UK); Joint Inst. for Nuclear Research, Dubna (USSR). Submitted to J. Phys., C.

The protonic superionic conductor $CsHSO_4$ has been studied by μSR over the range of temperatures 15-440 K. The first successful observation of superionic phase transition by the μSR method is reported. A spasmodic change in relaxation rate and asymmetry was observed as the transition temperature was approached. There are no any remarkable differences in the relaxation rate between deuterated and protonated samples in the temperature range 15-290 K. Asymmetry revealed in isotope effect. The temperature dependence and isotope effect for asymmetry may testify the formation of muonium fraction in the sample. Together with the published NMR results the obtained μSR data confirm the fact that the high ionic conductivity in $CsHSO_4$ is the result of high monility of protons in a superionic phase. 9 refs.; 5 figs.

Hydrogen passivation of radiation-induced defects in silicon in p-n transitions and the Schottky barrier is investigated by the method of non-stationary capasitive spectroscopy. Radiation-induced defects are introduced during structure irradiation by protons (30 MeV) and by α-particles (4.7 MeV). It is established that after treatment in hydrogen plasma there appears a large number of hydrogen atoms in specimens capable to passivation of all electrically active centers - both divacancies and carbon interstitials. This conclusion is confirmed by the data on thermal annealing. 1 ref.; 2 figs.

The results of investigation of the effect of radiation-induced defects, formed by argon ions with E=225 MeV, on the volt-ampere characteristic direct branch of silicon p-n transitions. It is established, that increase of direct current $\approx 10^3$ times at $U_d \simeq 0.2$ V (T=300 K) and $\approx 10^2$ time at $U_d \simeq 0.9$ V (T 77 K). The value of recombination parameter, m, after irradiation depends on voltage and changes from 1.2 to 2.3. The authors consider the phenomena observed to relate to the formation of inhomogeneities in the region of a special charge of p-n-transition and to the appearance of new current components.

A spectrum of radiation-induced defects in silicon alloyed with boron, aluminium or gallium at n^+-p-transitions and the Schottky barriers is investigated by the method of non-stationary capcitive spectroscopy of deep levels. Three main bands corresponding to the states and transitions of divacancies and interstitial atoms of carbon in the region of high concentration of defects are detected in spectra obtained immediately after irradiation by high-energy particles (electrons, protons and α-particles) and after annealing at room temperature. Band amplitude dependences on onjection of auxiliary carriers, as well as stability of centers investigated during annealing are studied. 2 figs.

50084 (LA–11915-MS) **Secondary-electron yield measurements from metals impacted by high- velocity ions, electrons, and molecules.** Suszcynsky, D.M.; Borovsky, J.E.; Barraclough, B.L. Los Alamos National Lab., NM (USA). Sep 1990. 14p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-36. Order Number DE90018023. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

In support of several recent experiments, the Space Plasma Physics Group at Los Alamos National Laboratory has measured the secondary-electron yields from metals impacted by high-speed projectiles. Secondary-electron yields from gold, tantalum, and oxidized aluminum surfaces were measured using H^{+1}, H_2^{+1}, H_3^{+1}, $^3He^{+1}$, $^3He^{+2}$, $^4He^{+2}$, $^9Be^{+4}$, $^{10}B^{+5}$,$^{12}C^{+6}$, and $^{16}O^{+8}$ in projectiles in the 1- to 11-MeV/amu energy range. Measurements of secondary-electron yields from titanium, copper, molybdenum, silver, tantalum, gold, lead, uranium, oxidized aluminium, brass, stainless steel, and aquadag surfaces were made with 0.6- to 40-keV electrons provided by scanning electron microscopes at Los Alamos and at the University of Iowa. These measured yields are presented in tabular form. 15 refs., 1 figs., 7 tabs.

50085 (LBL–26455, pp. 81) **Quasiparticle calculation of valence-band offset of AlAs-GaAs(001).** Zhang, S.B.; Tomanek, D.; Louie, S.G.; Cohen, M.L.; Hybertsen, M.S. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

A first-principles quasiparticle theory for band offsets of heterojunctions is developed and used to compute the valence band offset ΔE_v for the prototypical AlAs-GaAs(001) interface. The result, $\Delta E_v = 0.53 \pm 0.05$ eV, is in good agreement with recent experimental values and in particular with the most recent photoluminescence data, $\Delta E_v = 0.56 \pm 0.03$ eV, for a sample grown by molecular-beam epitaxy. The authors show that there is a substantial many-body correction of 0.12 eV to the value of the valence-band offset calculated using local-density functional theory.

50086 (LBL–26455, pp. 218) **Novel properties of matter at megabars of pressure.** Cohen, M.L.; Jeanloz, R.; Yu, P.Y. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

The purpose of this research project is to investigate the properties of matter at megabars of pressure both experimentally and theoretically. The objective is to combine the expertise of experimentalists and theorists in the area of high-pressure technology, materials characterization techniques, inorganic synthesis, and theoretical computation of properties of matter to synthesize and investigate new materials with unusual properties or with potential applications to energy technology. Examples of these new materials are ultrahard solids with strength comparable to or exceeding that of diamond, and solids with unusual electrical, superconducting, optical, and magnetic properties. What distinguishes this project from other high-pressure projects is the close interaction between the theoretical group of Marvin Cohen and the two experimental groups under Raymond Jeanloz and Peter Yu. The theoretical group uses the ab initio pseudopotential method to calculate the ground-state properties of solids as a function of volume. The theoretical predictions are tested by experiments performed by the Yu and Jeanloz groups. These two investigators have broad experience in materials science and with a wide range of high-pressure techniques, such as high-temperature synthesis of inorganic materials, x-ray crystallography, Raman and emission spectroscopies, Fourier-transform infrared spectroscopy, and low-temperature electrical-transport measurements.

50087 (NIFS-DATA–1) **Data compilation of angular distributions of sputtered atoms.** Yamamura, Yasunori; Takiguchi, Takashi; Tawara, Hiro. National Inst. for Fusion Science, Nagoya (Japan). Jan 1990. 219p. Order Number DE90520450. Source: NTIS (US Sales Only), PC A10/MF A01.

Sputtering on a surface is generally caused by the collision cascade developed near the surface. The process is in principle the same as that causing radiation damage in the bulk of solids. Sputtering has long been regarded as an undesirable dirty effect which destroys the cathodes and grids in gas discharge tubes or ion sources and contaminates plasma and the surrounding walls. However, sputtering is used today for many applications such as sputter ion sources, mass spectrometers and the deposition of thin films. Plasma contamination and the surface erosion of first walls due to sputtering are still the major problems in fusion research. The angular distribution of the particles sputtered from solid surfaces can possibly provide the detailed information on the collision cascade in the interior of targets. This report presents a compilation of the angular distribution of sputtered atoms at normal incidence and oblique incidence in the various combinations of incident ions and target atoms. The angular distribution of sputtered atoms from monatomic solids at normal incidence and oblique incidence, and the compilation of the data on the angular distribution of sputtered atoms are reported. (K.I.).

50088 (UCRL-JC–103948) **MONT3E: A Monte Carlo electron heat transfer code.** Maltby, J.D.; Kornblum, B.T. Lawrence Livermore National Lab., CA (USA). Apr 1990. 29p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-901121–3: Association for Computing Machinery/Institute of Electrical and Electronics Engineers supercomputing conference, New York, NY (USA), 12-16 Nov 1990). Order Number DE90012091. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A Monte Carlo code, MONT3E, was written to analyze heat transfer due to electron backscattering. The availability of supercomputers has made large-scale applications of this analysis technique possible. Statistically valid solutions of complicated engineering problems can now be performed. In this paper, the physical theory of electron trajectories is described and related to the implementation of an electron tracing algorithm. The analysis requires three types of information: a geometric description of the enclosed volume under analysis, magnetic field definition, and a model of electron-surface interaction. The implementation of these three components in MONT3E is presented. Suitability of the formulation to various computer architectures is discussed. An electron backscatter experiment was modeled using the code. The MONT3E predictions compared favorably to the experimental data, lending confidence to code predictions. Additional information available in the simulations provided new physical insights into the electron experiment. Comparison with the analytic solution to a related problem is also presented. 12 refs., 15 figs.

The traveler attended the 19th International Conference on Low-Temperature Physics providing him with an intensive overview of much of the research effort in low-temperature physics. Roughly one-half of the total number of conference presentations were talks and posters on the properties of high-temperature superconductors. At the conference, as well as during visits to the University of Cambridge and the University of Birmingham, the traveler was able to discuss technical details of numerous research topics with the individuals directly involved.

The style of mathematics used in contemporary physics has evolved considerably during the last twentyfive years. Groups, topology and differential geometry have become an intergral part of the physicist's jargon in their attempt to express the laws of the nature in lucid and compact terms. The notes prepared are based on the lectures given by the author in the Mathematics Seminar of the Theoretical Physics Division in the latter half of 1985. These lecture notes contain an introduction to manifolds and differential forms in the most succinct manner that is possible. It is essentially an attempt to familiarise the reader with the requisite vocabulary in this area of mathematical physics without scaring them with excess of rigour. This hopefully will help in following the contemporary literature in physics. (author). 6 refs.

The compatibility between accuracy and stability of the quasilinear equations is studied. Three stuations are analyzed: the discontinuous P-1 approximation of the first order quasilinear equation, the two dimensional version of the Lax-Friedrichs scheme and the coupling of modes in a plasma. For the one dimensional case, the proposed scheme matches the available data. In the two dimensional case, tests to show the explosion condition are performed. This investigation can be applied in laser-matter interactions, nonlinear optics and in many fields of physics.

50093 (IAE–4757-1) **Synthesis of oneparticle excitation from two giant quantum monopoles.** Shishkov, S.Yu. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 3p. (In Russian). Order Number DE91600481. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

Within the framework of the two-dimensional quantum hydrodynamics of an incompressible homogeneous ideal fluid the hypothesis on the existence of the quantum point vortex (monopole) is suggested. It is shown that if this hypothesis is valid, then one-particle excitation, which was through of as indivisible earlier, is monopole+antimonopole pair bound state. 4 refs.

50094 (IFUSP-P–800) **Functionals Hartree-Fock equations in the Schrodinger representation of quantum field theory.** Gamboa, J. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Aug 1989. 8p. Order Number DE91600482. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

Hartree-Fock equations for a scalar field theory in the Schrodinger representation are derived. It is shown that renormalization of the total energy in the functional Schrodinger equation is enterely contained in the eigenvalues of the Hartree-Fock hamiltonian. (A.C.A.S.).

50095 (IFUSP-P–836) **Quantum mechanics of relativistic particles in multiply connected spaces and the Aharonov-Bohm effect.** Gamboa, J. (Centro de Estudios Cientificos de Santiago, Santiago (Chile)); Rivelles, V.O. Sao Paulo Univ., SP (Brazil). Inst. de Fisica. Apr 1990. 11p. Order Number DE91600483. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

We consider the motion of free relativistic particles in multiply connected spaces. We show that if one of the spatial dimensions has the topology of a circle then the D dimensional spacetime is compactified to D-1 dimensions and the particle mass increases by an amount which is proportional to a quantum phase factor and inversely proportional to the radius of the circle. We also consider the relativistic Aharonov-Bohm effect and we show that the interference pattern is a universal characteristic due only to the topological properties of the experimental situation and not to the intrinsic properties of the particle. The propagators are calculated in both situations. (author).

50096 (IFVE-OTF–89-80) **On integrating of a singular integro-differential equation.** Leznov, A.N. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 4p. (In Russian). Order Number DE91600477. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

The solution of an integro-differential equation with the Cauchy core is reduced to a uniform Riemann conjugacy problem with the matrix coefficient, being a preset function of the initial value and parameter g. 4 refs.

50097 (IS-M–643) **Elementary inversion, energy velocity, and a generalized Sommerfeld theorem.** Roberts, T.M.; Hobart, M. Ames Lab., IA (USA). [1990]. 10p. Sponsored by U.S. Department of Defense; U.S. DOE Energy Research. DOE Contract W-7405-ENG-82. Contract N0014-83-K-0038. (CONF-900756–41: SPIE's international symposium on optical and optoelectronic applied science and engineering exhibit, San Diego, CA (USA), 8-13 Jul 1990). Order Number DE90018046. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We will do three things: show how to infer elementarily from time-domain precursors some frequency-domain information. Second, make observations on energy velocity that may be surprising. Third, generalize Sommerfeld's theory about the speed of light.

50098 (ITEF–93-89) **Quantization with acount of barrier permeability.** Mur, V.D.; Popov, V.S. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. A correction to the Bohr-Sommerfeld quantization rules connected with the final barrier permeability (for quasistationary states) is obtained. The analytical continuation of quantization conditions in the superbarrier region is discussed. The results obtained are illustrated using the example of a exactly solvable model, as well as for the stark effect in a strong field. 27 refs.; 3 figs.

50099 (JINR-R-2-89-182) **The energy problem in GR and tensor analysis.** Chernikov, N.A. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1989. 12p. (In Russian). Order Number DE91600504. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The object well-known in geometry, tensor of affine deformation, was from the very beginning lost in the general relativity (GR). This carelessness, having put tensor analysis in a bad light, generated a pseudotensor subculture that was crowned with pseudotensor energy of the gravitational field. The meaning of a substitute for the tensor energy has been discussed for more than seventy years. Introduction of a lost tensor into RG allows one to construct on the basis of the tensor analysis the gravity theory without any substitutes and to finally solve the energy problem of the gravitational field. 53 refs.

50100 (JINR-R-2-89-224) **Tensor lost in general relativity theory.** Chernikov, N.A. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1989. 7p. (In Russian). Order Number DE91600505. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

In the tensor gravity theory developed in this paper two tensor fields $g^{ab}=g^{ba}$ and $P_{mn}{}^{a}=P_{nm}{}^{a}$ are in the foreground. The first field defines the Christoffel connection $\Gamma_{mn}{}^{a}$ and the second one defines the background connection $\Gamma_{mn}{}^{a}$. They are used to express algebraically the energy tensor linear in g^{ab} and quadratic in $P_{mn}{}^{a}$. If the curvature tensor of the background connection is everywhere zero, the tensor gravity theory transforms into the Einstein theory so that a new theory satisfies the correspondence principle. A case of semiprimitive background connection is separated. A tensor lost in the general relativity is the known in geometry tensor of the affine deformation $P_{mn}{}^{a}=\Gamma_{mn}{}^{a}-\Gamma_{mn}{}^{a}$. 5 refs.

50101 (JINR-R-11-89-188) **Solution of eigenvalue problem for one class of hypersingular quasipotential integral equations.** Zhidkov, E.P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation); Khoromskij, B.N.; Nikonov, Eh.G. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation. 1989. 22p. (In Russian). Submitted to Mat. Modelirovanie.

Spectral properties of one class of hypersingular operators on semiaxis are investigated. Estimates of approximation errors by the Galerkin methods are obtained in the eigenvalues problem for these operators. The results of numerical calculations for model problems are given. 27 refs.; 3 tabs.

50102 (KFTI-88-36) **Some dynamical properties of the linear three-particle chain.** Bolotin, Yu.L.; Gonchar, V.Yu.; Chekanov, N.A. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1988. 5p. (In Russian). Order Number DE91600488. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

In one of Lunsford and Ford papers it was stated that Hamiltonian of three-particle system $H = 1/2(P_1^2 + P_2^2 + P_3^2) + V(x_1 - x_2) + V(x_2 - x_3) = V(x_3 - x_1)$ in a cubic approximation is reduced to the known Henon-Heyles Hamiltonian. In the present paper it is shown that the above-mentioned result is valid only to invariant relatively C_{3v} discrete group Hamiltonians. Hamiltonian of such system may be represented as a power series each member of which is represented in terms of two invariants of C_{3v} group. 11 refs.

50103 (LA-UR-90-1845) **Random number stride in Monte Carlo calculations.** Hendricks, J.S. Los Alamos National Lab., NM (USA). [1990]. 7p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-901101-4: American Nuclear Society winter meeting, Washington, DC (USA), 11-15 Nov 1990). Order Number DE90012000. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Monte Carlo radiation transport codes use a sequence of pseudorandom numbers to sample from probability distributions. A common practice is to start each source particle a predetermined number of random numbers up the pseudorandom number sequence. This number of random numbers skipped between each source particles the random number stride, S. Consequently, the jth source particle always starts with the j-Sth random number providing "correlated sampling" between similar calculations. A new machine-portable random number generator has been written for the Monte Carlo radiation transport code MCNP providing user's control of the random number stride. First the new MCNP random number generator algorithm will be described and then the effects of varying the stride will be presented. 2 refs., 1 fig.

50104 (RFP-4418) **Anecdotal history of acoustic emission from wood.** Drouillard, T.F. EG and G Rocky Flats, Inc., Golden, CO (USA). Rocky Flats Plant. 16 Jul 1990. 22p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC34-90DP62349. (CONF-901176-1: 34. acoustic emission working group meeting, Urbana, IL (USA), 12-15 Nov 1990). Order Number DE90014471. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The development of acoustic emission technology has primarily been with metals, and more recently with composites. Currently there is a growing interest in the study of acoustic emission from wood. This has led to the preparation of a special bibliography of AE literature on wood by T. F. Drouillard and F. C. Beall, which in turn, prompted a look into the history of acoustics associated with wood, wood products, and wooden structures. Little historical material and relatively few publications were found on the subject. This article presents a historical review on the dearth of information that could be found – from the reports of miners relying on the audible sounds from mine support timbers providing a warning of impending failure and the beginnings of the study and documentation of acoustic emission from wood, starting with experiments reported as early as 1934 by F. Kishinouye in Japan, up to the introduction of fracture mechanics of wood in 1964 by A. W. Porter – all collated into the general history of acoustic emission. Included are a number of anecdotes relative to the history of sound and acoustic emission.

50105 (RRK-90-9) **Correlation function of gravitational deflection angles of light paths.** Watanabe, Kazuya; Tomita, Kenji. Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics. Apr 1990. 16p. Order Number DE90520328. Source: NTIS (US Sales Only), PC A03/MF A01.

The correlation function of gravitational deflection angles of light paths is investigated in a simplified cosmological model universe. Under several reasonable assumptions, an analytic formula for the correlation function is derived. The implication to the cosmic microwave background anisotropy and the distance defined by the observed angular (linear) scale of a source is also discussed. (author).

50106 **General relativistic hydrodynamics and radiation transport.** Bludman, S.A. (Pennsylvania Univ., Philadelphia, PA (USA). Dept. of Physics); Schinder, P.J. pp. 265-275 of Proceedings of the fourteenth Texas symposium on relativistic astrophysics. Fenyves, E.J. The New York Academy of Sciences, New York, NY (USA) (1989). (CONF-881268-: 14. Texas symposium on relativistic astrophysics, Dallas, TX (USA), 11-16 Dec 1988).

The authors have developed an implicit hydrodynamics code in polar-sliced comoving coordinates that, because it is regular everywhere outside the apparent horizon, completely covers the space-time domain of outer communication, gives maximum coverage of material zones, and allows calculation through many time steps of dynamic and of quasi-static evolution. In the same polar-sliced comoving gauge, they wrote down the general relativistic transport equation and moment equations and solved for the variable Eddington factor by the generalization of the tangent-ray method used in nonrelativistic transport theory. The authors have calculated the stationary transport in a weak and strong static gravitational field and found that gravity enhances the optical thickness and leads to a moderate reduction in the forward-peaking of the radiation field in an extended spherical atmosphere, and redshifts the luminosity and mean intensity, as expected.

50107 **A new field experiment in the Greenland ice cap to test Newton's inverse square law.** Ander, M.E. (Los Alamos National Lab., NM (USA)); Nieto, M.M.; Zumberge, M.A.; Parker, R.L.; Lautzenhiser, T.; Aiken, C.L.V.; Ferguson, J.F.; McMechan, G.A. pp. 672-680 of Proceedings of the fourteenth Texas symposium on relativistic astrophysics: Volume 571. Fenyves, E.J. The New York

Academy of Sciences, New York, NY (USA) (1989). (CONF-881268–: 14. Texas symposium on relativistic astrophysics, Dallas, TX (USA), 11-16 Dec 1988).

Recent experimental evidence suggests that Newton's law of gravity may not be precise. There are modern theories of quantum gravity that, in their attempts to unify gravity with other forces of nature, predict non-Newtonian gravitational forces that could have ranges on the order of 10^2–10^5 m. If they exist, these forces would be apparent as violations of Newton's inverse square law. A geophysical experiment was carried out to search for possible finite-range, non-Newtonian gravity over depths of 213–1673 m in the glacial ice of the Greenland ice cap. The principal reason for this choice of experimental site is that a hole drilled through the ice cap already existed and the uniformity of the ice eliminates one of the major sources of uncertainty arising in the first of earlier studies, namely, the heterogeneity of the rocks through which a mine shaft or drill hole passes. This paper presents observations made in the summer of 1987 at Dye 3, Greenland, in the 2033-m-deep borehole, which reached the basement rock.

50108 (AD-A-222719/7/XAB) **Analysis of the published calorimetric evidence for electrochemical fusion of deuterium in palladium. Technical report.** Miskelly, G.M.; Heben, M.J.; Kumar, A.; Penner, R.M.; Sailor, M.J. California Inst. of Tech., Pasadena, CA (USA). Dept. of Chemistry. 10 Nov 1989. 7p. Contract N00014-88-K-0482. (TR–8). Source: NTIS, PC A02/MF A01.

Pub. in Science, Vol. 246, 793-796(10 Nov 1989).

Estimates are given of the raw data that are the basis for the claims of excess power production by the electrochemical charging of palladium in deuterium oxide (D2O). Calorimetric results are also presented that show no anomalous power production in either 0.1 M LiOD/D2O or 0.1 M LiOH/H2O (LiOH is lithium hydroxide). Several possible sources of error in open-system calorimetry are discussed that can confound interpretation of temperature changes in terms of anomalous power production.

Bhabha Atomic Research Centre, Bombay (India). 1989. 58p. Order Number DE91600853. Source: NTIS (US Sales Only), PC A04/MF A01; OSTI; INIS.

Computer simulation is a growing field of research and plasma physics is one of the important areas where it is being applied today. This report describes the particle method of simulating a two-dimensional electrostatic plasma. The methods used to discretise the plasma equations and integrate the equations of motion are outlined. The algorithm used in building a simulation program is described. The program is applied to simulating the Two-stream Instability occurring within an infinite plasma. The results of the simulation are presented. The growth rate of the instability as simulated is in excellent agreement with the growth rate as calculated using linear theory. Diagnostic techniques used in interpreting the data generated by the simulation program are discussed. A comparison of the computing environment of the ND and PC from a user's viewpoint is presented. It is observed that the PC is an acceptable computing tool for certain (non-trivial) physics problems, and that more extensive use of its computing power should be made. (author). 5 figs.

For very rapid (0.5-lμs) Joule heating of a conducting metallic foil, in which the temperature rises before the liquid foil has the time to expand, it can be expected that the mechanical inertia of the foil could cause the internal pressure to increase to sufficiently large values to bypass the critical point (P_c,T_c), allowing a continuous transition from the liquid to the gas phase, without any boiling. In order to illustrate this effect and to understand if such a situation can really occur in a real foil explosion experiment, the case of sodium foils is studied here using an analytical approach. For simplicity, we assume a uniform temperature in the foil, and we neglect radiation and evaporative mass losses. The foil expansion is represented by a self-similar model. The pressure is governed by the foil inertia and is obtained from the known values of the bulk modulus and the density variations as a function of the temperature. In spite of the oversimplified character of the used model, the possibility to overpass the critical point is obtained for the parameters which were found to yield experimentally a well-defined uniform plasma from thin Na and Al foils explosions.

[1990]. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. (IAEA-CN–53/C-3-4). From 13. international conference on plasma physics and controlled nuclear fusion research; Washington, DC (USA); 1-6 Oct 1990. Order Number DE90017326. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

We present experimental results on edge turbulence and transport from the tokamak TEXT and the torsatron ATF. The measured electrostatic fluctuations can explain the edge transport of particles and energy. Certain drive (radiation) and stabilizing (velocity shear) terms are suggested by the results. The experimental fluctuation levels and spectral widths can be reproduced by considering the nonlinear evolution of the reduced MHD equations, incorporating a thermal drive from line radiation. In the tokamak limit (with toroidal electric field) the model corresponds to the resistivity gradient mode, while in the currentless torsatron or stellarator limit it corresponds to a thermally driven drift wave.

50113 (CTH-IEFT-PP–1990-03) **Prestudy of burn control in NET: Second intermediate report, February 1990.** Anderson, D. (Chalmers Univ. of Tech., Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics); Hamnen, H.; Lisak, M.; Elevant, T.; Lorenzen, J.; Persson, H. Chalmers Univ. of Tech., Goeteborg (Sweden). The present report describes our ongoing work on a number of selected topics, and the plans for the near future. In chapter 2 we

have specialized the system of the previous report to form an easily tractable, second-order system. In this case one can give an explicit, analytical condition for stability. A code providing quick answers regarding stability, time scales and eigenvectors has been written and tested. The zerodimensional modelling of a burning plasma described by space dependent equations is often done in a heuristic way, with no clear relation between the two systems of equations. We have tried to put the approximation procedure involved in the transition to 0-D models on a more formal basis. This is the topic of chapter 3. The 1-D equilibrium solution is also investigated with respect to its stability properties, which are shown to be the same as those derived from the simplest 0-D space averaged model. Chapter 4 contains a few emerging thoughts on burn control. First, the limited swing of the auxiliary heating gives rise to limitations on the possibilities to intervene against temperature excursions by an auxiliary heating modulation. This problem becomes severe when one operates at high Q values. Another analysis concerns the problem of selecting a proper control action when a temperature profile differs from the equilibrium shape. A couple of alternative schemes for burn control, minor radius alterations and dynamic stabilization are tentatively discussed; no definite answers on their feasibility are obtained. The problem of diagnosing the plasma with respect to burn conditions is the topic of chapter 5. The influence on the energy distribution of control actions and the reliability of neutron measurements are discussed, and the question of how to handle sawteeth is briefly revisited. Chapter 6 is a description of process identification and how it could be used for burn control. (Abstract Truncated)

50114 (DOE/ER/52127–72) **CTR plasma engineering studies: Annual progress report, December 1, 1989–November 30, 1990.** Miley, G.H. Illinois Univ., Urbana, IL (USA). Dept. of Nuclear Engineering. [1990]. 26p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER52127. Order Number DE90017774. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The main focus of the work by the Fusion Plasma Engineering Group at the University during the prior contract year involved a study of fusion ash (helium) effects on burn efficiency and on potential ways to control ash buildup. This work has wide application to a variety of fusion reactor concepts, but the immediate application for the present work is in the ARIES tokamak reactor design study now being undertaken by a national design team headed by the UCLA. The examples presented here largely deal with the ARIES-I design which is a D-T device operating in the first instability regime.

50115 (DOE/ER/53198–160) **Confinement and fluctuations in the MST [Madison Symmetric Torus] reversed field pinch.** Sprott, J.C.; Almagri, A.F.; Assadi, S.; Beckstead, J.A.; Chartas, G.; Dexter, N.; Den Hartog, D.J.; Hokin, S.A.; Holly, D.J.; Prager, S.C.; Rempel, T.D.; Sarff, J.S.; Scime, E.; Shen, W.; Spragins, C.W.; Watts, C. Wisconsin Univ., Madison, WI (USA). Plasma Physics Research. Sep 1990. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-85ER53198. (CONF-901025–7: 13. international conference on plasma physics and controlled nuclear fusion research, Washington, DC (USA), 1-6 Oct 1990; IAEA-CN–53/C-2-2-(2)). Order Number DE90018019. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

MST is a large (R_0/a = 1.5/0.52 m) RFP which to date has obtained 80 ms discharges at a peak plasma current of 0.6 MA. Low loop voltages (15 volts) and modest temperatures ($T_e/T_i \approx$ 350/250 eV) are routinely obtained giving estimated unoptimized energy confinement times of about 1 ms. Loop voltage and ion temperature are anomalous. Magnetic fluctuations are typically 0.5% with most of the power at frequencies below 30 kHz and mode numbers in agreement with MHD prediction for tearing modes. Electrostatic fluctuations are typically 10 to 20% with a spectrum that decreases with frequency. 5 refs., 2 figs.

50116 (DOE/ER/53240–3) **Theoretical and numerical studies in magnetic mirror fusion: Progress report.** Yale Univ., New Haven, CT (USA). [1990]. 23p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER53240. Order Number DE90017605. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

It is proposed to investigate the dependence of neo-classical transport on aspect ratio and on the structure of the magnetic surfaces for general collisionality by use of relaxation models for collisions for a general mixture of electrons and ions. An optimum relaxation frequency will be determined for each transport coefficient by fitting those limiting results available. Simple models of turbulent transport will be added. A general purpose code will be developed, including the resulting transport equations, and made accessible to the fusion community. The results of this code his will be compared with known results. The solutions using the simple relaxation model will be compared with the counterpart results to be obtained by using a Lorentz model for collisions.

50117 (DOE/ER/53297–2) **High beta and confinement studies on TFTR: Progress report, September 25, 1989–May 24, 1990.** Columbia Univ., New York, NY (USA). Dept. of Applied Physics and Nuclear Engineering. [1990]. 23p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-89ER53297. Order Number DE90017722. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

In the first 8 months of this project we have made substantial progress toward the goals set out in our original proposal. Our plan to access new regimes of operation at high values of $\varepsilon\beta_p$ using low current discharges in TFTR has worked extremely well and a new regime of operation has indeed been found in the course of our execution of TFTR Experimental Proposal 146 which involved our operation of TFTR on 9 November 1989, 19–20 January 1990 and 1–2 February 1990. The status of our high $\varepsilon\beta_p$ work on TFTR is given and is extracted from our paper submitted for presentation to the 1990 EPS meeting in Amsterdam. We have also performed an analysis of the energetic particle stabilization requirements for TFTR Supershots, and developed methods for analysis and a theory of perturbative transport measurements in TFTR.

50118 (DOE/ET/53088–447) **Natural current profiles in a tokamak.** Taylor, J.B. Texas Univ., Austin, TX (USA). Inst. for Fusion Studies. Aug 1990. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-80ET53088. (IFSR–447). Order Number DE91000128. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

In this paper I show how one may arrive at a universal, or natural, family of Tokamak profiles using only accepted physical principles. These particular profiles are similar to ones proposed previously on the basis of ad hoc variational principles and the point of the present paper is to provide a justification for them. However in addition, the present work provides an interesting view of Tokamak fluctuations and leads to a new result – a relationship between the inward particle pinch velocity, the diffusion coefficient and the current profile. The basic Tokamak model is described in this paper. Then an analogy is developed between Tokamak profiles and the equilibrium of a realisable dynamical system. Then the equations governing the natural Tokamak profiles are derived by applying standard statistical mechanics to this analog. The profiles themselves are calculated and some other results of the theory are described.

50119 (DOE/ET/53088–451) **Effects of compressibility, diamagnetic drift, and thermal conduction on resistive ballooning modes in the second stability regime.** Kim, Jin-Yong; Choi, D.I.; Van Dam, J.W.; Horton, W. Texas Univ., Austin, TX (USA). Inst. for Fusion Studies. Aug 1990. 23p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-80ET53088. (IFSR–451). Order Number DE90017618. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The stabilizing effects of various terms such as compressibility, diamagnetic drift, and parallel thermal conduction are investigated on the type of resistive ballooning modes whose driving force comes from the resistive region, which are known to be unstable in the high-beta second stability regime when analyzed in the incompressible limit. We find that compressibility gives a significant stabilizing effect mainly through the perpendicular magnetic compression, which suggests the possibility of a second stable window for these resistive ballooning modes. The diamagnetic drift terms slightly reduce the growth rate in the incompressible limit, but, with finite compressibility, lead to fairly strong stabilization. The compression due to ion polarization, which becomes significant at large

diamagnetic drift, contributes to this stabilization. On the other hand, parallel thermal conduction and perpendicular magnetic compression, which enter through the equation for temperature evolution, are shown to have a negligible effect on the stability of these modes.

50120 (DOE/OR/00033–T445) **Variable eigenmode excitation in the beach heating of two-ion-species mirror plasmas.** Roberts, D.R. Wisconsin Univ., Madison, WI (USA). 1990. 206p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC05-76OR00033. Order Number DE90017511. Source: NTIS, PC A10/MF A01; OSTI; INIS; GPO Dep.

Variable eigenmode excitation scans of the ion species ratio of hydrogen-helium and hydrogen-deuterium plasmas has been examined in the bench-heating configuration of the Phaedrus-B central cell. m = −1 fields were selectively excited by a "rotating-field" antenna array at ω/Ω_H = 0.8. The coupled wave energy propagates through a steep axial magnetic gradient into a region of strong ion-cyclotron resonance absorption which is located Δ z = 50cm from the antenna. Evidence of varied fast- and slow-wave eigenmode excitation and absorption, including variations in the radial profiles of waves magnetic field and plasma parameters, was observed during the scans. Optimal peak parameters in the plasma core, n_e = 1.0 × $10^{13}cm^{-3}$, $T_{e\|}$ = 20eV, $T_{i\|}$ = 140eV, $T_{i\perp}$ = 450eV, and β = 0.2, were obtained for moderate helium or deuterium ion fractions (puffed $n_{He}/n_e = n_D/n_e \sim 0.25$). These parameters exceed those obtained under the same conditions with "pure" hydrogen plasmas: n_e = 7.0 × $10^{12}cm^{-3}$, $T_{e\|}$ = 25eV, $T_{i\|}$ = 80eV, $T_{i\perp}$ = 300eV, and β = 0.1. These variations are in agreement with those expected from antenna-eigenmode coupling considerations.

50121 (EUR-CEA-FC–1359) **Diagnosis of superthermal electrons using cyclotron radiation.** Fidone, I.; Giruzzi, G. Association Euratom-CEA, Centre d'Etudes Nucleaires de Grenoble, 38 (France). Dept. de Recherches sur la Fusion Controlee. Jun 1989. 31p. Source: NTIS (US Sales Only), PC A03/MF A01.

Selective electron-cyclotron emission and absorption by fast electron tails are discussed using the concepts of momentum-space spectra and collective resonance velocity. This is defined from the maximum of the emission and absorption profiles in the momentum space for a system of electrons and represents the counterpart of the one-particle resonance velocity. It is shown that the collective resonance is sensitive to the superthermal momentum distribution and is therefore a useful parameter in the diagnosis of the fast electron tail. A simple relation between the collective resonance and the emission and absorption coefficients for propagation normal to the magnetic field is found. This theoretical framework is used for a new diagnostic method based on the localized (in phase space) perturbation of the electron tail by an electron-cyclotron wave and emission and transmission of radiation at higher harmonics. A numerical application is presented for the case of a lower-hybrid sustained tail, using the appropriate Fokker-Planck and ray-tracing codes.

50122 (IAE–4740-6) **Kinetic limitations on sausage compression of Z-pinches.** Filippov, D.V.; Yan'kov, V.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1988. 5p. (In Russian). Order Number DE91600854. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

It was shown tha accounting thermal drifts results in a loss of particles and weakens sausage stabilization. A vortex equation was written, describing a motion in the pinch corona. 9 refs.

50123 (IAE–4756-6) **Nonlinear development of two-dimensional axial-symmetric MGD instability in a Z-pinch.** Kolkunov, B.O.; Solov'ev, L.S. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 24p. (In Russian). Order Number DE91600855. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Plasma dynamics at the final stage of compression in Z-pinch-type installations is considered in terms of classical single-liquid MHD. The development of an exisymmetric instability from an initially equilibrium cylindrical configuration is initiated by a plasma velocity perturbation. The equilibria studied constitute a uniparametric family with various instability growth rates. The nonlinear development of the instability results in a transition to quasiequilibrium at the boundary of stability, the equilibrium being determined by the initial-state parameters. The transition is accompanied by a total current drop. 18 refs.; 10 figs.; 2 tabs.

50124 (IAE–4767-6) **Gas jet magnetic compression dynamics.** Gasilov, V.A.; Grigor'ev, S.F.; Zakharov, S.V.; Krukovskij, A.Yu.; Skorovarov, S.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 16p. (In Russian). Order Number DE91600765. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Magnetic compression of helium jets has been mathematically simulated taking into account the possibility of existence of a rare corona around the jets and an external longitudinal magnetic field. The existence of the corona and external magnetic field is shown to result in reducing the liner aspect ratio. 19 refs.; 10 figs.

50125 (IAE–4775-8) **Possibility of using first collision probability method for solution of the problem of photon transport.** Fedulov, M.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 15p. (In Russian). Order Number DE91600764. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The possibility of using the probability first collision method to solve the problems of photon transport in a hot plasma is studied. The precision of the approximation envisaging flux isotropy at conventional boundaries between separate plasma zones (regions) is estimated. For line radiation in the approximated version of the method it is assumed that the spectrum of photons entering the zone coincides with the profile of lines in it. 5 refs.; 4 figs.

50126 (IAE–4784-7) **Thomson scattering equipment for investigation of plasma filament scrape-off layer at the T-10 tokamak.** Gorshkov, A.V.; Potemkin, N.R.; Sannikov, V.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 19p. (In Russian). Order Number DE91600815. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The diagnostics of Thomson scattering with a multipass system of laser radiation input for the measurement of the electron plasma temperature in the peripheral region of the plasma filament at the T-10 device, including the behind-the-limiter region is described. The given diagnostic equipment operates in a wide range of discharge parameter changes (n-bar$_e$(0.5-6)x$10^{13}cm^{-3}$,Te=20-70 eV, I=160-450kA) and permits to measure peripheral electron temperature during single discharge of the tokamak. 6 refs.; 12 figs.; 2 tabs.

50127 (IAE–4785-7) **Methods of superchronous processing of signals in high-temperature plasma diagnostics.** Volkov, V.V.; Kakurin, A.M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 21p. (In Russian). Order Number DE91600816. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Applications of methods for synchronous processing of signals in plasma studies have been reviewed. Concrete versions of these methods in the tokamak experiments are presented. 17 refs.; 13 figs.

50128 (IAE–4787-8) **Electron distribution function and rate constants of elementary processes in a tokamak near-wall plasma.** Dvornikova, N.A.; Zajtsev, F.S.; Krasheninnikov, S.I.; Smirnov, A.P. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 8p. (In Russian). Order Number DE91600844. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

The effect of the non-Maxwellian behaviour of the electron distribution function caused by both the collisions of electrons with neutrals and the temperature gradient on the rate constants (RC) of elementary processes in tokamak near-wall plasma has been considered. It is shown that the neutral component causes the change in the RC by less than 10%, the electron temperature gradient at temperatures lower than 4 eV changes the RC several times as compared with the Maxwellian RC. 4 refs.

50129 (IAE–4827-6) **Equilibrium of plasma filament with inhomogeneous field along on axis and without of longitudinal current.** Dobryakov, A.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 17p. (In Russian). Order Number DE91600766. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The equilibrium of a plasma filament with an inhomogeneos nonuniform field along an axis that has not any asymmetry has been considered for the first order of $\beta=8\ \pi p/B^2$ and the curvature. The filament is assumed to be inside an ideally-conducting sheath with a circular cross-section. It is shown that the filament shift depends noticeably on this sheath. The plasma equilibrium has been considered as an example in a Drakon magnetic trap. 9 refs.

50130 (IAE–4838-7) **Diagnostics of impurity and neutral components of tokamak plasma by the resonance fluorescence method.** Talybov, V.M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 11p. (In Russian). Order Number DE91600817. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Equipment using resonance fluorescence method for diagnostics of impurity and neutral components of the Tuman-3 tokamak plasma has been developed. The description of the equipment is given. Test results of the equipment are presented. Results of preliminary experiments are given. 8 refs.; 3 figs.

50131 (IAE–4848-16) **Statistical simulation of Coulomb collisions in a plasma.** Semenets, Yu.M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 11p. (In Russian). Order Number DE91600845. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

A Monte-Carlo method for the Boltzmann equation is used for solving the nonlinear Landau equation for description of processes in collisional fully ionized plasma. 6 refs.; 3 figs.

50132 (IAEA-CN–53/C-4-7) **Fluctuations and stability in the Advanced Toroidal Facility (ATF) torsatron.** Harris, J.H. (Oak Ridge National Lab., TN (USA)); Charlton, L.A.; Bell, J.D.; Bigelow, T.S.; Carreras, B.A.; Colchin, R.J.; Crume, E.C.; Dominguez, N.; Dunlap, J.L.; Dyer, G.R.; England, A.C.; Glowienka, J.C.; Hillis, D.L.; Hiroe, S.; Horton, L.D.; Howe, HInternational Atomic Energy Agency, Vienna (Austria). [1990]. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. (CONF-901025–8: 13. international conference on plasma physics and controlled nuclear fusion research, Washington, DC (USA), 1-6 Oct 1990). Order Number DE90017734. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

We present the results of experimental and theoretical studies of fluctuations and instabilities in the ATF torsatron, a type of stellarator. Measurements of globally coherent magnetic fluctuations in high-β plasmas with narrow pressure profiles produced by a field error show evidence of self-stabilization ('second stability'); the trends are compatible with theoretical analysis of self-stabilization of resistive curvature-driven instabilities, but there are discrepancies between the absolute experimental and theoretical fluctuation amplitudes. Fluctuation measurements in plasma with broad pressure profiles reveal new phenomena–specifically, toroidally localized magnetic fluctuations, whose amplitudes increase with plasma pressure, and coherent density fluctuations with significant radial width.

50133 (IPPCZ–293/III) **Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak".** Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. 215p. (In Russian, English). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

The proceedings of the seminar contain 19 contributions dealing with various problems of plasma diagnostics in tokamaks and thermonuclear reactors. The diagnostics and data acquisition systems being developed for direct use in the T-15 tokamak are discussed in 15 papers. Particularly, the submillimeter interferometer, X-ray, VUV and neutron spectrometers and the time-of-flight analyzer of neutrals are described in detail. Special attention is paid to nuclear diagnostic methods of fusion products, especially alpha particles. The other papers deal with Langmuir probe measurements in edge plasmas, with the influence of radiation on diagnostic systems and their components and with the general theoretical results on the lower hybrid current drive relevant to hot plasma diagnostics. (J.U.).

50134 (IPPCZ–293/III, pp. 1-11) **Technological start of T-15 tokamak. The start-up diagnostic complex.** Notkin, G.E. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii). Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak".* Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

The T-15 tokamak with superconducting toroidal winding reached the technological start-up phase. The results of the first operating tests of the main tokamak components are reported. Due to improper function of both the vacuum and the cryogenic system, the nominal parameters of the vacuum and of the toroidal magnetic field have not been achieved. The non-optimum vacuum conditions made the discharge start-up difficult even when a pre-ionizing electron beam and a gyrotron generator were used. The pre-discharge plasma parametes were studied by means of a limited set of plasma diagnostic apparatus. Due to substantially deteriorated vacuum conditions, it was not possible to repeat the only one successful discharge with a current of 100 kA, lasting for 50 ms. (J.U.).

50135 (IPPCZ–293/III, pp. 12-19) **Two-wavelength, multichannel, submillimeter laser interferometer for measurements of plasma density in T-15 tokamak.** Vereszczinski, Z. (Instytut Fizyki Plazmy i Laserowej Mikrosyntezy, Warsaw (Poland)); Kasperczuk, A.; Paduch, M.; Tomaszewski, K.; Lesnewski, M.; Paprocki, K. Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak".* Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

A two-wavelength 11-channel submillimeter laser interferometer of the Michelson type is being prepared for electron density measurements in the T-15 tokamak. The optical system of the interferometer and its mechanical supporting structure are described in detail. Attention is paid to the optimization of the laser beam splitting system. Several variants of the laser beam path are discussed and the optimum reflection and transmission coefficients are given, calculated in dependence on the incident beam angle. (J.U.).

50136 (IPPCZ–293/III, pp. 20-29) **Diagnostic system CAE T-15 and prospects of its development.** Gulyaev, V.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii); Kovalenko, V.G.; Matalin-Slutskij, L.A.; Slepneva, L.I. Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak".* Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

The structure of a three-level hierarchical data acquisition and processing system set up for the diagnostic complex of the T-15 tokamak is described, and the prospects of its further development are discussed. The basic principles used in designing the system proved to be correct. Also the software package developed is capable of further improvement, as concerns the number and potential of the diagnostic subsystems and their dynamical characteristics. Nevertheless, some parts of the system are not fully up-to-date and cannot meet all prospective requirements. These parts must be complemented by new subsystems based on progressive technology. (J.U.).

50137 (IPPCZ–293/III, pp. 30-34) **High-resolution spectrometer with a spherical crystal for the T-15 tokamak.** Gryzgunov, V.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii); Gil'varg, A.B.; Chuvatin, S.A. Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak"*. Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

A high-resolution X-ray spectrometer with a spherical crystal as dispersion element will be used for ion temperature measurements in the T-15 tokamak. A CCD array is supposed to be used to record the outcoming radiation. A spectrometer of the same type but with photographic detection, was tested during experiments in the T-10 tokamak. The ion temperature was evaluated from the Doppler broadening of the resonance lines of He-like chromium ions.

50138 (IPPCZ–293/III, pp. 35-40) **X-ray monochromator for ion temperature measurements in the T-15 tokamak.** Stepanenko, M.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii). Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak"*. Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

The theory underlying X-ray spectrometers in which a spherically bent crystal is used as the dispersion element, is briefly recapitulated and the basic characteristics of the high-resolution quartz crystal spectrometer developed for ion temperature measurements in the T-15 tokamak are given. The spectral resolution of the spectrometer is 1.7×10^{-4} A/mm. To cover the full range of the ion temperatures expected in the T-15 tokamak, the resonance line of the He-like nickel ion is recommended as the working line. (J.U.).

50139 (IPPCZ–293/III, pp. 41-49) **X-ray spectrometer for the T-15 tokamak.** Sledzinski, S. (Instytut Fizyki Plazmy i Laserowej Mikrosyntezy, Warsaw (Poland)); Nedzelski, V.; Zelinski, B.; Mamczur, M. Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak"*. Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

A high-resolution X-ray spectrometer is being developed for plasma diagnostics in the T-15 tokamak. A diagram of the spectrometer is presented. X radiation is analyzed by means of a spherically bent quartz crystal and detected by a scintillator, coupled via fiber optics to an electron-optical image intensifier. The intensified picture is recorded by a TV camera and the output signal is processed by a computer-controlled data acquisition system for which a special software package has been developed. (J.U.).

50140 (IPPCZ–293/III, pp. 50-51) **VUV spectroscopy in the T-15 tokamak.** Bugarya, V.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii); Ivanov, I.V.; Krupin, V.A.; Myalton, T.B. Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak"*. Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

The ion temperature, the impurity level, and the impurity transport in the T-15 tokamak will be studied by methods of VUV plasma diagnostics. The VUV diagnostic complex will consist of several VUV spectrometers covering the range of 10 to 2000 A. The basic characteristics of the spectrometers are given. (J.U.).

50141 (IPPCZ–293/III, pp. 52-53) **Charge-exchange spectroscopy in the T-15 tokamak.** Berezovskij, E.L. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii); Krupin, V.A. Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak"*. Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

The ion plasma temperature in the T-15 tokamak will be evaluated from the Doppler broadening of resonance lines excited by the charge exchange of plasma ions on atoms of the diagnostic and heating neutral beams. The diagnostic complex will consist of several spectral analyzers working both in the visible and VUV spectral regions. (J.U.).

50142 (IPPCZ–293/III, pp. 54-63) **Automated system of visible and ultraviolet spectroscopy for the T-15 tokamak.** Borowecki, M. (Instytut Fizyki Plazmy i Laserowej Mikrosyntezy, Warsaw (Poland)); Mamczur, M.; Nedzelski, V.; Skrzeczanowski, V.; Zelinski, B. Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak"*. Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

Visible and VUV radiation spectroscopy represents one of the most important techniques of plasma diagnostics in the T-15 tokamak. A diagram of the spectroscopic apparatus developed in IPPLM, Warsaw is given, the optical system and its mechanical structure are described in detail, and the results of the detector testing are reported. The computer control system and the software used are also dealt with.

50143 (IPPCZ–293/III, pp. 64-73) **A time-of-flight analyzer of low energy atoms (preliminary test on the CASTOR tokamak).** Stoeckel, J. (Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu); Vetesnik, P.; Jakubka, K.; Zacek, F.; Berezovskij, E.L. Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak"*. Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

The time-of-flight analyzer TOFAN is described, developed for determination of the central ion temperature in the CASTOR tokamak for energy-resolved monitoring of particle fluxes from the plasma edge in the T-15 tokamak. The analyzer makes it possible to detect charge exchange atoms in the energy range of 0.02 to 1 keV. The neutral atom flux is chopped by a rotating chopper disc and detected by a secondary emission detector, followed by an electron multiplier and a wide-band preamplifier. Preliminary results of absolute calibration of the apparatus are reported and the first energy spectra of neutrals from the CASTOR tokamak plasma are shown. (J.U.).

50144 (IPPCZ–293/III, pp. 85-107) **Project of CFP plasma diagnostic system for the T-15 tokamak.** Zaveryaev, V.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii); Popovychev, S.V.; Zhogolev, V.E.; Putvinskij, S.V.; Majsyukov, V.D.; Gamayunov, S.N.; Mirskij, I.E.; Shevchenko, A.P. Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak"*. Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

Various charged particles originating in fusion reactions, such as protons, tritons, ^{3}He nuclei and alpha particles, provide valuable information on thermonuclear plasma parameters. Plasma diagnostic methods based on the detection of charged fusion products will be used in the T-15 tokamak. A diagram of the diagnostic system is

shown and its individual parts are described in detail. The charged particles will be detected by room-temperature surface-barrier detectors, shielded against UV and visible radiation and equipped with microchannel plates serving as collimators. Theoretical estimates of the number of recorded particles and results of preliminary calibration measurements of the detectors are presented. (J.U.).

50145 (IPPCZ–293/III, pp. 138-169) **Some problems of plasma diagnostics in an experimental thermonuclear reactor.** Orlinskij, D.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii). Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak".* Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

General problems of the choice of plasma diagnostic methods for experimental thermonuclear reactors are discussed. The parameters of the designed reactors and the radiation conditions in their environment are briefly reviewed, and the influence of radiation on various diagnostic systems is examined. The diagnostic systems suitable for the technological and physical stages of the reactor operation are discussed. At the physical stage, the investigation of plasma heating by alpha particles and of their influence on the plasma confinement is of primary importance. Attention is paid to various methods of diagnostics of both the confined and the escaping alpha particles, each method being discussed in detail. (J.U.).

50146 (IPPCZ–293/III, pp. 170-194) **Diagnostics of a thermonuclear plasma, based on the use of nuclear reactions.** Kiptilyj, V.G. (AN SSSR, Leningrad (USSR). Fiziko-Tekhnicheskij Inst.). Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak".* Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

Intense thermonuclear processes in future thermonuclear devices will make it possible to use fusion products for the determination of thermonuclear plasma parameters. Nuclear reactions between various plasma particles such as protons, deuterons, tritons, alpha particles and light target nuclei, are discussed from the point of view of hot plasma diagnostics. Especially the resonant radiative capture reactions are recommended for investigation of the interaction of fast alpha particles and protons with a plasma. The ion plasma temperature may be determined also from neutron-induced target activation. All the diagnostic methods mentioned are based on the spectroscopy of gamma radiation. The advantages of the gamma spectroscopic methods in comparison with conventional methods are emphasized. (J.U.).

50147 (IPPCZ–293/III, pp. 120-137) **Results of preliminary theoretical investigations of the lower hybrid current drive in the T-15 tokamak.** Klima, R. (Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu); Pavlo, P.; Petrzilka, V.A.; Preinhaelter, J.; Hurtak, O.; Parail, V.V. Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak".* Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

The results of a theoretical study of the lower hybrid current drive in tokamaks are used to choose the optimum frequency of the feeding high-frequency generator. It is shown that the frequency of 3.6 GHz applied, e.g., in the JET facility is not suitable for the T-15 tokamak. After a brief recapitulation of the multijunction grill theory, the problems of grill optimization are discussed. The optimum grill spectrum is found, and its modification due to wave scattering on plasma density fluctuations is studied. The peripheral plasma density for the lower hybrid current drive is shown to be the most important parameter for the choice of the generator frequency. For the T-15 tokamak, a frequency of 4.6 GHz is recommended. (J.U.).

50148 (IPPCZ–293/III, pp. 204-211) **Investigation of edge plasma by means of Langmuir probes.** Rainer, H.-D. (Akademie der Wissenschaften der DDR, Berlin (German Democratic Republic). Zentralinstitut fuer Elektronenphysik); Herrmann, A.; Laux, M.; Pech, P.; Sachtleben, J. Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (In Russian). (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak".* Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

Two instruments were developed for exploitation of Langmuir probes in the T-15 tokamak. The Langmuir-2 system is designed for measurements with single and double Langmuir probes, including computerized acquisition and processing of experimental data. A more sophisticated version of the previous system, Langmuir-3, enables parallel measurements with up to 8 Langmuir probes of any type at enhanced accuracy and dynamic range. Problems of interpretation of Langmuir probe data obtained in plasmas with strong magnetic fields also are discussed. (J.U.).

50149 (IPPCZ–293/III, pp. 212-215) **A method for determination of the electron temperature from Langmuir probe data in a tokamak edge plasma.** Dvoracek, J. (Karlova Univ., Prague (Czechoslovakia). Fakulta Matematicko-Fyzikalni); Sicha, M.; Tichy, M.; Vesely, V.; Kryska, L.; Stoeckel, J.; Zacek, F. Ceskoslovenska Akademie Ved, Prague (Czechoslovakia). Ustav Fyziky Plazmatu. May 1989. (CONF-8903244–: Seminar of CMEA experts on plasma diagnostics in T-15 tokamak, Liblice (Czechoslovakia), 15-16 Mar 1989). In *Seminar of CMEA experts "Plasma diagnostics in T-15 tokamak".* Order Number DE91600824. Source: NTIS (US Sales Only), PC A10/MF A01; OSTI; INIS.

The effect of the ion current on the accuracy of the electron temperature determination by Langmuir probe measurements in tokamaks is investigated. The results of edge plasma studies performed in the CASTOR tokamak show that an ion correction must be included in the Langmuir probe data analysis. To minimize the influence of the ion current, the well known method of transformation of the single probe characteristics to the double probe one appears to be convenient. (J.U.).

50150 (ITEF–78-89) **Maximum compression of Z-pinch in a gas with high atomic number.** Gerusov, A.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 36p. (In Russian). Order Number DE91600803. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

An ideal system of equations with shock heating is used for describing of a Z pinch in a gas with high atomic number. In this case equations do not depend from the installation parameters. The approximate simple solution of such a system is presented. Numerical calculations of equations with radiative cooling and various dissipative effects have determined the employment conditions of ideal magnetohydrodynamic equation system. 10 refs.

50151 (ITF–88-110) **The spectra of spontaneous emission from inhomogeneous plasma half-space.** Gvozdetskij, V.S.; Zagorodnij, A.G.; Krivtsun, I.V.; Korchinskij, G.M.; Yakimenko, I.P. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1988. 36p. (In Russian). Order Number DE91600864. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The fluctuation theory of spontaneous emission from plasma half-space with the arbitrary profile of transition layer is developed. 18 refs.; 15 figs.

50152 (ITF–88-146) **Parametric instabilities of electromagnetic waves in layer of plasma-molecular medium.** Golubinskij, P.K.; Zagorodnij, A.G.; Yakimenko, I.P. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1988. 24p. (In Russian). Order Number DE91600865. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The kinetic theory of the stimulated scattering of electromagnetic waves is developed for a layer of plasma-molecular medium. The

dispersion relations describing the parametric excitations of volume and surface waves by a weak high-frequency field are obtained. 14 refs.

50153 (ITF–88-157) **Electromagnetic wave incoherent reflection by a plasma layer.** Zagorodnij, A.G.; Usenko, A.S. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1989. 47p. (In Russian). Order Number DE91600866. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The differential coefficients of incoherent electromagnetic waves reflected and transmitted by a weakly ionized plasma layer are calculated for arbitrary values of the coefficients of the particle absorption by the boundaries. The effect produced by the electron interaction with the boundaries on the frequency and angular distributions of the scattering emission is studied in detail. 23 refs.; 8 figs.

50154 (ITF–89-2) **Equilibrium distributions in plasma-molecular systems with non-plane boundaries.** Usenko, A.S. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki. 1989. 19p. (In Russian). Order Number DE91600804. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Equilibrium space-inhomogeneous distributions of free and pair-bound particles are calculated for a plasma-molecular cylinder and sphere. The influence of the parameters of outer medium and a plasma-molecular system on the space and orientational distributions of charged particles and molecules is studied in detail. 34 refs.

50155 (JAERI-M–90-066) **Review of JT-60 experimental results from January to October, 1989.** Japan Atomic Energy Research Inst., Tokyo (Japan). Mar 1990. 314p. Order Number DE90520221. Source: NTIS (US Sales Only), PC A14/MF A01.

Emphases in recent JT-60 experiments are placed on (1) improvements in plasma confinement with profile control and (2) steady state operation study. Both limiter and lower X-point divertor configurations were employed. The operating gas was hydrogen and, in some cases, helium. Improvements in confinement were demonstrated with pellet injection, LH current drive, high-Ti mode operation or ICRF. Current profile controllability with energetic electrons has been improved by the new LH launcher. The H-mode was achieved in limiter discharges with LH current drive for the first time. Nearly steady-state ELM-free H-mode with durations up to 3.3. sec was established without significant impurity accumulation. High-Ti and high-βp discharges were obtained in high field and low plasma current. Major experimental issues for the steady-state operation research were non-inductive current drive and He-ash exhaust. The neoclassical bootstrap current was confirmed in the wide range of βp. 30 keV helium NB was injected into NB heated lower X-point discharges, which produced centrally peaked birth profile of α-particles. A simple extension of the present result is promising for the helium exhaust in future device. (J.P.N.).

50156 (JAERI-M–90-081) **Density limit in JT-60.** Kamada, Yutaka (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Hosogane, Nobuyuki; Hirayama, Toshio; Tsunematsu, Toshihide. Japan Atomic Energy Research Inst., Tokyo (Japan). May 1990. 21p. Order Number DE90520263. Source: NTIS (US Sales Only), PC A03/MF A01.

This report studies mainly the density limit for a series of gas- and pellet-fuelled limiter discharges in JT-60. With the pellet injection into high-current/low-q (q(a)=2.3≈2.5) discharges, the Murakami factor reaches up to 10≈13 x 10^{19} $m^{-2}T^{-1}$. The values are about factors of 1.5≈2.0 higher than those for usual gas-fuelled discharges. The pellet injected discharges have high central density, whereas the electron density in the outer region (a/2<r) is limited below the same level with that for gas fuelled plasmas. The density limit can be explained with the power balance in the outer region of the plasma, for which the plasma purity (Zeff), heating power and the electron temperature are the key parameters. The disruptive limit of the density can be explained by P_{abs} and n_e^2(r=50 cm) x Z_{eff} (r=50 cm). (author).

50157 (KFTI–88-21) **Forced scattering of a non-ordinary electromagnetic wave by an electron beam in a plasma in magnetic field.** Miroshnichenko, V.I.; Fajnberg, Ya.B. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1988. 19p. (In Russian). Order Number DE91600867. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

A theory of collective processes under forced coherent scattering of a non-ordinary electromagnetic wave propagating in a plasma placed in a constant magnetic field is developed. A system of nonlinear reduced equations describing amplitude variation of interacting wave fields and the beam electron motion that in a general case is supposed to be relativistic is obtained. Cases of following and counter-running non-ordinary waves scattering by an electron beam are considered separately, elementary mechanisms forming the basis of such interaction are detected. In case of the fillowing non-ordinary wave scattering by an electron beam such elementary mechanism is anomalous scattering and case of counter-ordinary wave scattering - normal scattering. Scattered wave amplitude gain factors in limiting cases of realization of Raman scattering and modified decay are determined. Plasma role and effect on scattering are ascertained. 13 refs.

50158 (KFTI–88-26) **Study on the atom beams and plasma production at the materials evaporation by laser radiation.** Volkov, Ya.F.; Dyatlov, V.G.; Kiyashko, V.A.; Kornilov, E.A.; Mitina, N.I. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1988. 11p. (In Russian). Order Number DE91600805. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Possibility of plasma production from vapors of lead target irradiated by laser impulse with the following ionization of vapors by quick-changing magnetic field is considered. It is shown that when using neodium laser with the energy of up to 23 J the pulse duration of 0.8 μs and laser radiation intensity on target surface of 5-6 J/cm^2, the total number of evaporated lead atoms attains $\simeq 10^{19}$ per impulse. Under the effect of quick-changing acute-angle geometry magnetic field with H_{max} = 9 kOe, period of 40 μs plasma consisting mainly of Pb^{+3} and Pt^{+4} ions and with the density up to $n_e \simeq 1.5x10^{-3}$ is produced. Therewith due to plasma accumulation in a magnetic trap its maximum density is by an order of magnetude greater the initial vapor density. 9 refs.; 6 figs.; 1 tab.

50159 (KFTI–88-35) **Excitation of regular oscillations and acceleration of charged particles by electron beam in a non-uniform plasma resonator.** Balakirev, V.A.; Ostrovskij, A.O.; Tkach, Yu.V. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1988. 8p. (In Russian). Order Number DE91600868. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

Theoretical study of the non-uniform plasma density effect on dynamics of excitation of regular oscillations and acceleration of charged particles by electron beam in plasma resonator is carried out. It is shown that the main effect caused by non-uniformity of plasma density in a short magnetized plasma resonator ($\varkappa$L <or approx. 1, L -resonator length, $\varkappa$ - direct plasma wave gain factor) is origination of self-modulation modes of oscillations excitation and increase of the beam starting currents. Therewith possibility of effective realization of the two-beam electron acceleration mechanism is preserved. 7 refs.

50160 (KFTI–88-46) **Installation of disruption instability in the Uragan-2 large-shear stellarator.** Arsen'ev, A.V.; Volkov, E.D.; Kovalev, S.V.; Konovalov, V.G.; Kulaga, A.E.; Perepelkin, N.F.; Shapoval, A.N. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1988. 14p. (In Russian). Order Number DE91600856. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Instability of a single (small) disruption under weak electric fields E < E_{cr} and small currents [l/H] = 0.37 with strong plasma magnetization $\omega_{ce} > \omega_{pe}$ is studied in Uragan-2 racetrack stellarator in quasistationary ohmic discharges. Instability was observed at the stage of slow current decay under rather low MHD-activity of plasma. Disruption was accompained by typical perturbations of current magnetic field (m = 1, n = 0) corresponding to reconstruction of stellarator magnetic configuration and relaxation of all plasma parameters as well as plasma heating and decrease of the filament inductance. Disruption is not due to relaxation of fan-type

instability. Possibility of reinitiation of small disruption plasma current being maintained near the threshold value is shown. It is most probable that disruption instability mechanism is due to loss of filament equilibrium rested on resonance surface $t_\xi = 1.0$ or is due to loss of local equilibrium near this surface facing the plasma filament boundary. Further evolution of perturbation has many common features with the model of internal disruption instability in a tokamak suggested by Kadomtsev. 13 refs.; 7 figs.

50161 (NIFS–11) **Effect of confinement of SoL plasma on core temperature profile.** Itoh, K.; Itoh, S.-I. National Inst. for Fusion Science, Nagoya (Japan). Feb 1990. 11p. Order Number DE90520198. Source: NTIS (US Sales Only), PC A03/MF A01.

The dependence of the core confinement on the edge plasma parameter is discussed in L-mode tokamaks. Employing the result of the transport analysis in the scrape-off layer, the boundary condition for the transport in the core plasma is expressed in terms of the heating power. Various forms of the dependences of local thermal conductivity on the temperature and temperature gradient are examined. The power dependence of the edge temperature is found to be an origin of the profile resiliency holds in a wide range of the heating power in L-mode tokamaks. (author).

50162 (NIFS–12) **Plasma diagnostics and atomic processes.** Kato, Takako. National Inst. for Fusion Science, Nagoya (Japan). Feb 1990. 38p. Order Number DE90520197. Source: NTIS (US Sales Only), PC A03/MF A01.

Spectroscopic plasma diagnostics with the use of atomic processes are discussed relating to three subjects in the followings. (i) Time resolved X-ray spectra of titanium helium-like ions from tokamaks. X-ray spectra observed from tokamak plasmas are analysed with a non-ionization equilibrium model which could explain the time behavior of both spectra and ion abundances. (ii) Line intensity ratios of OV ions for temperature and density diagnostics. Intensity ratios of emission lines from OV ions are calculated for use in temperature and density diagnostics. The line emissions from a tokamak are analysed for the diagnostics of plasma periphery. (iii) Collisional processes in hot dense plasmas. The collisional ladder-like excitation and ionization in a hot dense plasma are discussed for the dielectronic states. This process enhances the excitation rate coefficients and decreases the resonance contributions to the excitation cross section. (author).

50163 (NIFS–14) **Current bubble formation by nonlinear coupling of resistive tearing modes.** Urata, Kazuhiro; Hatori, Tadatsugu; Amano, Tsuneo. National Inst. for Fusion Science, Nagoya (Japan). Feb 1990. 15p. Order Number DE90520195. Source: NTIS (US Sales Only), PC A03/MF A01.

The current bubble means a helical duct with low current density invading the inner high current region of current carrying toroidal plasmas. It is a non-turbulent analogue of the MHD clump. The numerical simulations show that it appears right after the absorption of a small magnetic island into the chaotic layer in the separatrix region of a large magnetic island. (author).

50164 (NIFS–15) **An empirical scaling of the thermal diffusivity applicable to both L- and H-mode discharges.** Ohyabu, N. National Inst. for Fusion Science, Nagoya (Japan). Feb 1990. 15p. Order Number DE90520194. Source: NTIS (US Sales Only), PC A03/MF A01.

An empirical scaling of the thermal diffusivity has been constructed which fits well with most of the key observations of steady-state heat transport in tokamaks. This scaling also agrees with observed dynamical transport phenomena and suggests interesting future experiments. (author).

50165 (PSC–7) **Conditions for ion reflection in a large-amplitude magnetosonic wave.** Ohsawa, Y. Nagoya Univ. (Japan). Plasma Science Center. Apr 1990. 26p. Order Number DE90520329. Source: NTIS (US Sales Only), PC A03/MF A01.

Ion orbits in a large-amplitude magnetosonic wave are studied numerically and analytically. The orbits are classified into three basic types. In the first type, ion pass through the wave without reflection and do not gain much energy. In the second type, they are reflected once and are accelerated in the direction of the wave normal; after the reflection they return to the wave front by the Lorentz force and pass through the wave. In the third type, they are reflected several times and are accelerated along the wave front; when they reach their maximum speeds, they are detrapped. Conditions for these types of reflection are discussed and the energies of accelerated ions are evaluated. (author).

50166 (CEA-CONF–9890) **Evidence of Rayleigh-Taylor instabilities in tri-layer targets.** Galmiche, D.; Holstein, P.A.; Meyer, B.; Rostaing, M.; Wilke, N. CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France). 1988. 5p. (CONF-8810234–: Workshop on the physics of compressible turbulent mixing, Princeton, NJ (USA), 24-27 Oct 1988). Order Number DE91700540. Source: NTIS (US Sales Only), PC A02/MF A01.

The results of the experiments carried out on a laser system are reported. The work is performed in order to investigate the problem of target instability under ablative acceleration and to get direct evidence of Rayleigh-Taylor instabilities. Tri-layer experiments assert the validity of X-ray spectroscopy measurements as experimental method to investigate the problem. A mixing zone is evidenced and general trends of mixing development versus target acceleration are coherent with numerical simulations. Results obtained with optical smoothing demonstrate that the apparent mixing is not due to large scale illumination non uniformities. Numerical simulations confirm that Rayleigh-Taylor instability seems to be the dominant process responsible for the mixing. Benefit of time resolved spectroscopy appears attractive and gives a real knowledge of the mixing layer.

50167 (CONF-900623–19) **Relationship of microstructure and tensile properties for neutron-irradiated vanadium alloys.** Loomis, B.A.; Smith, D.L. Argonne National Lab., IL (USA). [1990]. 28p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From 15. symposium on effects of radiation on materials; Nashville, TN (USA); 17-21 Jun 1990. Order Number DE90017863. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The microstructures in V-15Cr-5Ti, V-10Cr-5RTi, V-3Ti-1Si, V-15Ti-7.5Cr, and V-20Ti alloys were examined by transmission electron microscopy after neutron irradiation at 600°C to 21–84 atom displacements per atom in the Materials Open Test Assembly of the Fast Flux Test Facility. The microstructures in these irradiated alloys were analyzed to determine the radiation-produced dislocation density, precipitate number density and size, and void number density and size. The results of these analyses were used to compute increases in yield stress and swelling of the irradiated alloys. The computed increase in yield stress was compared with the increase in yield stress determined from tensile tests on these irradiated alloys. This comparison made it possible to evaluate the influence of alloy composition on the evolution of radiation-damaged microstructures and the resulting tensile properties. 11 refs.

50168 (CONF-901007–2) **Updated comparison of economics of fusion reactors with advanced fission reactors.** Delene, J.G. Oak Ridge National Lab., TN (USA). [1990]. 19p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 9. topical meeting on technology of fusion energy; Oak Brook, IL (USA); 7-11 Oct 1990. Order Number DE90017740. Source: NTIS, PC A03/MF A01; OSTI; INIS; GPO Dep.

The projected cost of electricity (COE) for fusion is compared with that from current and advanced nuclear fission and coal-fired plants. Fusion cost models were adjusted for consistency with advanced fission plants and the calculational methodology and cost factors follow guidelines recommended for cost comparisons of advanced fission reactors. The results show COEs of about 59–74 mills/kWh for the fusion designs considered. In comparison, COEs for future fission reactors are estimated to be in the 43–54 mills/kWh range with coal-fired plant COEs of about 53–69 mills/kWh ($2–3/GJ coal). The principal cost driver for the fusion plants relative to fission plants is the fusion island cost. Although the estimated COEs for fusion are greater than those for fission or coal,

the costs are not so high as to preclude fusion's competitiveness as a safe and environmentally sound alternative.

Sponsored by U.S. DOE Defense Programs. DOE Contract AC03-87DP10560. (KMSF-U–2205). Order Number DE90017515. Source: NTIS, PC A06/MF A01 - OSTI; GPO Dep.

This report discusses the following topics: cryogenic technology; empirical correlation of polystyrene shell properties with processing parameters; glass shell fabrication and characterization; coating technology; development of characterization techniques; induced spatial incoherence capabilities; laser-plasma interaction experiments; theory of laser-plasma interactions; and computational physics.

50170 (EUR–12522, pp. 133-157) **Irradiation testing for fusion technology. Current programme and future plans of KfK.** Roehrig, H.D. (Kernforschungszentrum Karlsruhe G.m.b.H. (DE)). Commission of the European Communities, Luxembourg (Luxembourg). 1989. (CONF-8904378–: HFR Colloquium, PETTEN (Netherlands), 20-21 Apr 1989). In *Prospects and future utilization.* Order Number DE91702056. Source: NTIS (US Sales Only), PC A18/MF A01.

Nuclear fusion, like any other nuclear technology, involves radiation, and the problems encountered from this fact are in principle similar as for fission reactors. The design of a fusion system can therefore, to a certain extent, start from existing materials and existing data on materials behaviour under fission reactor irradiation. But there are limits both of a fundamental and a practical nature. The practical restriction is simply that for certain materials irradiation data are limited or non-existent, that the dose-level has to be extended, that the irradiation temperatures and neutron spectra are different etc. The fundamental restriction is much more severe. It is caused by the fact that the favoured fusion reaction $D + T \rightarrow n + \alpha$ yields neutrons of about 14 MeV energy which in turn do not only cause damage by knock-on processes but also produce light reaction products like helium and protons which many cause strength degradation. To account for these effects several approaches are being made or planned world-wide. As an example, materials can be enriched with boron or nickel to produce sufficent helium in thermal reactors. Or, helium can be implanted in samples by accelerator irradiation, and these samples can afterwards (or at the same time) be irradiated in reactors or in a second particle beam. None of these methods is fully satisfying, be it for physical, technological or economic reasons. But it can be stated that they are all needed to contribute to an understanding of the irradiation effects to be expected in a fusion reactor. The role of the materials test reactors is clearly to provide irradiation data for a selection of materials by sufficient numbers and sizes of samples over the full range of possible operation parameters, e.g. temperatures, environment, flux and dose levels.

50171 (EUR–12522, pp. 159-177) **KFA Neutron irradiation programme on materials for high heat load components of fusion devices.** Thiele, B.A. (Kernforschungsanlage Juelich G.m.b.H. (DE). In this paper, after a brief description of the NET diverter, the author presents the experimental irradiation programme made on graphites and carbon-carbon fiber composites.

50172 (EUR–12522, pp. 179-196) **The function of the HFR, Petten, in the development of plasma facing components for fusion reactors.** Van der Schaaf, B. (Netherlands Energy Research Foundation, PETTEN (NL). Energy Study Centre). Commission of the European Communities, Luxembourg (Luxembourg). 1989. (CONF-8904378–: HFR Colloquium, PETTEN (Netherlands), 20-21 Apr 1989). In *Prospects and future utilization.* Order Number DE91702056. Source: NTIS (US Sales Only), PC A18/MF A01.

Plasma facing components comprise a wide range of materials from austenitic steel for the vacuum wall to carbon materials and ceramics in protection structures. Their application has one main environmental aspect in common: radiation damage from high energy neutrons. In the European Fusion Technology Programme the post-irradiation mechanical properties of austenitic stainless and ferritic martensitic steels, including advanced welded joints, are studied. The development of reduced activation alloys on both iron and vanadium bases are also relying of the HFR capabilities, as will be shown. The importance of the HFR for the improvement of wall protection with ceramics and carbon materials will be indicated. The HFR, Petten, produces high energy fission neutrons, but it constitutes a most useful tool to investigate fusion radiation effects in materials.

50173 (EUR–12522, pp. 197-224) **Joint research centre fusion materials irradiations in HFR: Present status and prospectives.** Casini, G. (Commission of the European Communities Ispra (IT). Joint Research Centre); Fenici, P. Commission of the European Communities, Luxembourg (Luxembourg). 1989. (CONF-8904378–: HFR Colloquium, PETTEN (Netherlands), 20-21 Apr 1989). In *Prospects and future utilization.* Order Number DE91702056. Source: NTIS (US Sales Only), PC A18/MF A01.

First a review is made of the Joint Research Centre experimental activity at HFR-Petten in the frame of the Fusion Technology and Safety Programme. The materials under investigation are: Cr-Ni Austenitic steels (316-L type) and Cr-Mn Austenitic steels (AMCR and FI type) as structural materials and Pb-17Li eutetic as tritium breeding material. The experiments on structural materials comprise: Sample irradiations with post-irradiation tensile tests (FRUST) Sample irradiations under constant load and post-irradiation strain measurement (TRIESTE) On-line creep tests (CRISP). The experiments on Pb-17Li breeder material regard sample irradiations to investigate tritium production and recovery as well as tritium permeation through blanket structures (LI-BRETTO Experiment). Both irradiations on structural and breeding materials will be pursued up to the end of the current JRC-Multiannual Programme (1988-1991) and even further. In the last part of the paper expected developments of the testing programme at HFR are discussed. New areas of research should involve materials for divertor applications (NET/ITER) and advanced low activation composite materials for Commercial Power Reactors.

50174 (IAE–4702-16) **Technique for calculation of electrostatic fields of high-current accelerator elements.** Pichugin, V.E. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1988. 29p. (In Russian). Order Number DE91600903. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Numeric algorithms for solving electrostatics problems are described. Fields in double forming lines of Angara-5 device modulus and in high-current accelerator acclerating tubes are calculated. Finite difference method realized in the ERA applied program package serves as the basis. Here the PG-2M inlet complex, comprising a specially developed PG-2M language, PG-2M translator and an internal language is used for the first time which allows one to easily and rapidly prepose information about calculated area geometry, boundary conditions and electrostatic field characteristics derived. 15 refs.; 10 figs.

50175 (IAE–4792-8) **Study on centrifugal acceleration of hydrogen pellets.** Zayatdinov, R.M.; Kareev, Yu.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 21p. (In Russian). Order Number DE91600901. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The numerical research results of solid hydrogen pellets acceleration for introducing them in thermonuclear parameter plasma by centrifuge are presented. A few forms of rotor track channels are considered and their comparative analysis is carried out. Two regions of rotor angle speed meannings are distinguished. In a first region the pellet speed is limited by rotor material hardness, in a second region - by pellet hardness itself. The first region is preferred since the pellet speed may achieve 2-2.4 km/s using organoplastic or carbonic fibre as the rotor material. 9 refs.; 13 figs.

50176 (IAE–4853-16) **Quasiequilibrium evolution of compact torus with toroidal field.** Belikov, V.V. (and others); Belikova,

G.V.; Goloviznin, V.M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 17p. (In Russian). Order Number DE91600899. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

The numerical calculations of adiabatic evolution of equilibrium magnetic configurations of a compact torus (CT) in the toroidal magnetic fields are present. These studies are performed in two regions: (1)CT formation takes place in the coaxial cavity, the coaxial component H_r being excited by the current from axial electrode; (2)The formation takes place in a hollow cylindrical chamber with two edge electrodes, and H_ϕ field is excited by current in plasma. 13 refs., 7 figs.

50177 (ITEF–87-89) **GITTAM code for numerical simulation of one-dimensional targets for heavy ion fusion. Part 1: Pt.1 System of equations.** Basko, M.M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 20p. (In Russian). Order Number DE91600904. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Equations are presented which enable one to perform numerical simulations of one-dimensional thermonuclear targets driven by fast ion beams. Radiation transport is approximated by the diffusion equation for radiative temperature. Nonlocal deposition of the thermonuclear energy is treated in the framework of simple approximations. 6 refs.

50178 (ITEF–89-89) **GITTAM program for numerical simulation of one-dimensional targets TIS. Part 3: 3. Testing calculations.** Basko, M.M.; Sokolovskij, M.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 28p. (In Russian). Order Number DE91600905. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Results of testing calculations according to GITTAM program, developed for numeric simulation of one-dimensional thermonuclear targets of heavy-ion synthesis are presented. Finite-difference method for solving a system of one-dimensional hydrodynamics equations with heat conductivity, radiation diffusion and thermonuclear combustion is used in the GITTAM program. In the tests presented, based on simple automodel solutions, adiabatic motion as well as distribution of shock, thermal and radial waves in gas with simple polytron state equation is investigated. 3 refs.; 6 figs.

50179 (KFTI–88-34) **Analytical representation of the geometry of helical windings for plasma devices.** Vorob'eva, V.P.; Georgievskij, A.V.; Lyubarskij, G.Ya.; Martynov, S.A.; Khazhmuradov, M.A. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1988. 9p. (In Russian). Order Number DE91600900. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

Algorithm of analytical description of the geometry of helical windings (HW) of high-torsion torsatrons is suggested. This permitted to automize the HW construction to reduce their design time and to increase labour productivity of designers searching optimal variant of a new device. 5 refs.; 6 figs.

50180 (NIFS–10) **Adiabatic invariant and evaluation of particle loss in helical torus.** Todoroki, Jiro. National Inst. for Fusion Science, Nagoya (Japan). Feb 1990. 41p. Order Number DE90520199. Source: NTIS (US Sales Only), PC A03/MF A01.

Analytic expression for the longitudinal adiabatic invariant is derived for general magnetic configuration. The orbit loss is evaluated to determine the outermost loss-free surface. Geometrical factor of the neoclassical transport coefficients in $1/\nu$ regime in helical torus is calculated by using the longitudinal adiabatic invariant. The dependence of the particle confinement upon the geometrical parameter is investigated for N = 10 configurations; and the improvement by the inward shift of the magnetic axis is quantitatively clarified. (author).

50181 (NIFS–13) **Loss cone region in toroidal helical systems.** Itoh, K.; Sanuki, H.; Todoroki, J.; Kamimura, T.; Itoh, S.-I.; Fukuyama, A.; Hanatani, K. National Inst. for Fusion Science, Nagoya (Japan). Feb 1990. 36p. Order Number DE90520196. Source: NTIS (US Sales Only), PC A03/MF A01.

Analytic formula is derived for the loss cone in the toroidal helical systems. Particular emphasis is put on the loss region for the particles which are barely trapped in the helical ripples. Effects of the radial electric field and shifts of the magnetic axis are discussed. Loss region is shown to be much wider than the evaluation given for the deeply trapped particles. (author).

50182 (RAL–90-022) **Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.** Davies, J.D. (Birmingham Univ. (UK). School of Physics and Space Research). Rutherford Appleton Lab., Chilton (UK). May 1990. 117p. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

In this booklet of conference proceedings, there are sections dedicated to experimental and theoretical work on muon catalyzed fusion. The final section deals with cold fusion. The booklet commences with a description of how muon catalyzed fusion came about and the basic theory behind it. (U.K.).

50183 (RAL–90-022, pp. 10-12) **Experimental investigation of muon-catalysed fusion in pure deuterium: current status and future possibilities.** Zmeskal, J. (Austrian Academy of Sciences, Vienna (Austria). Inst. for Medium Energy Physics); Kammel, P.; Scrinzi, A. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

This paper charts the experimental status of muon catalyzed fusion from 1960 to the present, noting a dramatic rise in interest from 1984 onwards. Theoretical work focused on resonance energies calculations and accurate work on the formation of matrix elements. The temperature dependence of formation rates for fusion products is noted. Work on very high temperature regions and the measurement of hyperfine transitions is planned for future research. (U.K.).

50184 (RAL–90-022, pp. 13-22) **Review of μCF and new LAMPF results.** Jones, S.E. (Brigham Young Univ., Provo, UT (USA). Dept. of Physics and Astronomy); Anderson, A.N. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

This paper on muon-catalyzed fusion reviews the study of yield, or the number of fusions per muon as a sum of the probabilities of muon decay during the catalysis cycle and of muon-scavenging in the dead-end processes. Current fusion yields are examined by considering energy applications for muon-catalyzed fusion. Power generation by this process seems unlikely at present because of the barrier imposed by the alpha-muon sticking and currently available production rates for muons. (U.K.).

50185 (RAL–90-022, pp. 23-26) **Interpretation of recent LAMPF results on dtμ formation.** Leon, M. (Los Alamos National Lab., NM (USA)). Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

This paper reports some surprising results from work during muon-catalyzed fusion on the formation of dtμ muonic molecules. To their surprise the authors conclude that there are significant epithermal contributions to the steady-state molecular formation rates at 23 °K. Several theoretical perspectives are examined for an explanation. (U.K.).

50186 (RAL–90-022, pp. 32-34) **Experiment for direct measurement of final sticking ω_s in muon catalyzed dt fusion.** Petitjean, C. (Paul Scherrer Inst. (PSI), Villigen (Switzerland)); Lou, K.; Ackerbauer, P. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

Maximum fusion output from muon-catalyzed fusion seems to be limited by muon-alpha sticking. New experiments to measure the sticking probability directly are described in this paper. The method is based on measuring the charge produced by alphas or muon-alphas in an ionization chamber, and on simultaneous detection of 14 MeV neutrons associated with dt fusion using plastic scintillation counters. This experiment measures the sticking probability to 5% absolute precision, and produced valuable information about mesomolecular formation rates. (U.K.).

50187 (RAL–90-022, pp. 42-44) **New results in muon catalyzed pd fusion.** Petitjean, C. (Paul Scherrer Inst. (PSI), Villigen (Switzerland)); Lou, K.; Ackerbauer, P. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

Experiments to achieve a better understanding of the kinetics of pμd muon-catalyzed fusion are described. Mixtures of liquid protium and deuterium in various concentrations were examined at 20 °K. The 5.5 MeV gammas, characteristic of pμd fusion were detected using a high resolution Germanium diode. A method of combine measurement of pd and dd channels allows several parameters to be determined simultaneously, namely μd populations, μd spin transitions, pμd formation and pμd fusion. (U.K.).

50188 (RAL–90-022, pp. 45-46) **Emission of muonic hydrogen isotopes from solid hydrogen layers into vacuum.** Marshall, G.M. (TRIUMF, Vancouver, BC (Canada)); Bailey, J.M.; Beer, G.A. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

An attempt has been made to create in a vacuum free muonic hydrogen atoms, muonic protium (μ^-p) and muonic deuterium (μ^-d)* in order to isolate specific processes unambiguously and thus contribute to a better understanding of muon-catalyzed fusion, muon capture and quantum electrodynamics. A beam of negative muons is slowed in a layer of solid hydrogen in vacuum frozen to a cold gold foil substrate. Several possibilities for the exploitation of muonic hydrogen emission are examined. (U.K.).

50189 (RAL–90-022, pp. 47-48) **Diffusion of muonic hydrogen atoms.** Kraiman, J.B. (College of William and Mary, Williamsburg, VA (USA)); Chen, G.; Guss, P.P. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

An experiment is described to measure two main quantities which govern the kinetic energies of muonic hydrogen atoms, the initial kinetic energy distribution of muons after the cascade and cross sections for the spins of the muonic atoms. This information will allow muon-catalyzed fusion to be better understood, as the energy distribution of muonic atoms during the catalysis cycle is known. Muons are stopped in a gaseous hydrogen target into which an array of planar foils is immersed. (U.K.).

50190 (RAL–90-022, pp. 52-53) **Rotational and temperature effects on Coulomb capture of muons by hydrogen molecules.** Korenman, G.Ya. (Moskovskij Gosudarstvennyj Univ., Moscow (USSR). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki); Leonova, S.V.; Popov, V.P.; Dolinov, V.K. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

A general approach to the theory of slow muon-molecule collisions is developed in this paper, taking molecular rotation and vibration into account. Kinetic characteristics of Coulomb-capture can be influenced by temperature due to dependence of the averaged cross-sections. This effect is calculated for the relative probabilities of muon Coulomb capture in the (H_2 + He) and (H_2 + D_2) mixtures. (U.K.).

50191 (RAL–90-022, pp. 54-55) **Kinetics of the excited mesic hydrogen in the mixture of hydrogen isotopes.** Gula, A. (Institute of Physics and Nuclear Techniques, Cracow (Poland)); Kravtsov, A.; Popov, N. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

This experimental study of muon transfer in different deuterium and tritium mixtures allow the theory of muon-catalyzed fusion to be verified and the efficiency of muon catalysis to be estimated. The calculated values of the ground state population of mesic deuterium for a protium-deuterium mixture are presented. It may also be determined using muon polarization studies in protium-deuterium mixtures. The problems associated with the poisoning of the hydrogen target by helium from nuclear fusion and tritium decay are also noted. (U.K.).

50192 (RAL–90-022, pp. 69) **Accuracy-weighted variational principle for degenerate continuum states.** Danos, M. (National Inst. of Standards and Technology, Gaithersburg, MD (USA)). Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

This paper offers a numerical solution for Schroedinger's equation as it applies to continuum states using the Ritz method for use in studying muon-catalyzed fusion. The accuracy of the solution is maximized in pre-selected regions of space. The method allows the selection of a solution that is needed to a particular application from the infinitely degenerate solution set. (U.K.).

50193 (RAL–90-022, pp. 72) **μCF studies in University of Tsukuba.** Ishihara, T. (Tsukuba Univ., Ibaraki (Japan). Inst. of Physics); Hara, S. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

Three topics are discussed which are being studied at the University of Tsukuba in Japan in relation to muon-catalyzed fusion research. Variational calculations for the binding energies of muonic molecules were carried out by adopting spheroidal coordinates. This is found to work well even for weakly bound states. Adiabatic potential curves and non-adiabatic coupling terms were calculated for the low lying states of the $(dt\mu)^+$ molecule. Bound-state energies of the even-parity muonic molecules with total angular momentum, J=1 were also calculated. A new approach is offered for muon transfer in low energy rearrangement collision in the Coulomb three-body problem. In addition $d\mu$ + t collisions were

studied at thermal energies. Lifetime studies on some muonic molecules were also carried out. (U.K.).

50194 (RAL–90-022, pp. 73-74) **Resonances in muonic systems.** Hu, C.Y. (California Univ., Los Angeles, CA (USA). Dept. of Physics); Bhatia, A.K. Rutherford Appleton Lab., Chilton (UK). May 1990. Grant RII8721929. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

Feshbach-type or closed-channel resonances have been found to have stabilized roots for muonic systems such as $t\mu$ or $d\mu$. From their results, the authors conclude that when there is more than one open channel a root which seems to be stabilized close to the threshold could tend to the threshold as the number term is increased, indicating the absence of a resonance. No resonances are found above the n=1 threshold of $d\mu$, but they are found below the n=2 threshold of $d\mu$ and $t\mu$. (U.K.).

50195 (RAL–90-022, pp. 79-80) **Phase space, meson exchange and the photon connection in sticking.** Chatterjee, L. (Jadavpur Univ., Calcutta (India). Dept. of Physics). Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

This paper deals with various aspects of alpha-muon sticking in muon-catalyzed d-t fusion. The sticking factor has been interpreted as a branching ratio and computed using the rates for stuck and continuum states with proper phase space integrations. Meson exchange diagrams are thought to contribute to the understanding of stuck and continuum matrix elements. By introducing proper two and three body final state phase space factors, the relevant rates can be used for computed sticking. (U.K.).

50196 (RAL–90-022, pp. 84-85) **Angular-momentum alignment effects under slowing-down of muonic helium ion in the μ CF.** Balashov, V.V. (Moskovskij Gosudarstvennyj Univ., Moscow (USSR). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki); Dolinov, V.K.; Konovalov, D.A.; Shakirov, V.A. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

A group of Soviet scientists report on a theoretical investigation of the effects of angular momentum alignment under the slowing-down of muonic helium ions during muon-catalyzed fusion. The slowing-down cascade processes were studied and the close-coupling method was used to calculate collision-induced transitions between the $He\mu^+$ states. The effective sticking probability is calculated by considering muon regeneration during the slowing down process. (U.K.).

50197 (RAL–90-022, pp. 103-104) **Cold fusion in palladium: the experimental results from PSI.** Blaser, J.P. (Paul Scherrer Inst. (PSI), Villigen (Switzerland)); Haas, O.; Petitjean, C. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

Following the 1989 claim to have produced cold fusion by catalyzing deuterium in heavy water electrolysis on palladium cathodes, a programme of experiments was set up at the Paul Scherrer Institute, and is here reported, which aimed to verify the claim. No evidence of excess heat was observed, nor were fusion neutrons or gamma rays. No excess levels of ^3He or ^4He were found in the palladium which could be attributed to fusion, and tritium traces corresponded only to the original contamination rates. In short, no evidence for cold fusion was found. (U.K).

50198 (RAL–90-022, pp. 105-107) **The non-observation of cold nuclear fusion in electrolytic cells stimulated by high intensity stopped muons and pions.** Davies, J.D. (Birmingham Univ. (UK). School of Physics and Space Research); Anderson, A.N.; Alper, B. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

This paper reports on tests, for palladium and titanium cathodes, for two of the many theoretical models that aim to reduce Coulomb tunneling lifetimes in order to explain claimed observations of cold fusion during the electrolysis of D_2O using these two elements as cathodes. The ISIS facility at the Rutherford Appleton Laboratory provided the high stopping intensity and very low, delayed-background of its pulsed muon/pion beam. The authors conclude that cosmic ray muon fluxes claimed by previous workers are insufficient to explain the observed fusion neutron rate. Other effects, of the spread of energy hot spots, are also explained, and claims for cold fusion are thus not verified. (U.K.).

50199 (RAL–90-022, pp. 108-109) **Cold fusion and tritium.** Cohen, J.S. (Los Alamos National Lab., NM (USA)); Davies, J.D. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

The authors examine recent and prospective experimental data relating to claimed observations of cold fusion from electrolysis of D_20 with palladium or titanium cathodes. Experiments with tritium may prove a decisive test of the cold or hot fusion debate, and indeed may allow different mechanisms of hot fusion to be decided upon. Safety considerations must be weighed very carefully as tritium is very radioactive and easily exploded with a wide range of oxygen concentrations. The authors urge fellow scientists to produce more reproducible results at statistically significant levels, but suggest that some null results for microscopically hot fusion neutron detection may be a result of choice and treatment of the alloy selected. (U.K.).

50200 (RAL–90-022, pp. 111-113) **Response to queries regarding "Observation of cold nuclear fusion in condensed matter".** Jones, S.E. (Brigham Young Univ., Provo, UT (USA). Dept. of Physics and Astronomy); Czirr, J.B.; Decker, D.L.; Jensen, G.L.; Palmer, E.P. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

One of the first teams of scientists, who claimed to have observed cold fusion, respond in this paper to some of the criticisms levelled against their work, focusing on care with neutron detection, and interpretation of results, and precautions taken to try to eliminate systematic error such as cosmic ray neutrons being miscounted as fusion products. (U.K.).

50201 (RAL–90-022, pp. 114-116) **On the criteria followed in the Gran Sasso measurement on cold nuclear fusion.** Bertin, A. (Bologna Univ. (Italy). Ist. di Fisica); Bruschi, M.; Capponi, M. Rutherford Appleton Lab., Chilton (UK). May 1990. (CONF-8909262–: International symposium on muon catalyzed fusion μCF - 89, Oxford (UK), 10-13 Sep 1989). In *Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989.* Order Number

DE90706209. Source: NTIS (US Sales Only), PC A06/MF A01; OSTI; INIS.

The criteria, under which measurements to reproduce cold fusion were performed, are detailed in this paper in order to eliminate erroneous interpretation of the Gran Sasso group's work by other scientists. Systematic and statistical improvements to the experimental set up are planned. The difficulties of detecting fusion produced neutrons and energy release from gamma rays is examined and the authors restate their claim for low-level cold nuclear fusion observations. (U.K.).

50202 (SAND–90-1346C) **Intense ion beam transport in neutral gas.** Olson, C.L. Sandia National Labs., Albuquerque, NM (USA). [1990]. 4p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-9009200–14: 1990 LINAC conference, Albuquerque, NM (USA), 10-14 Sep 1990). Order Number DE91000026. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

An analysis is made of the gas breakdown that occurs when an intense ion beam is injected into neutral gas and a high electrical conductivity is produced, providing charge and current neutralization for beam transport.

50203 (KEK-PR–89-3) **Photon Factory activity report, 1989.** National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). 1990. 428p. Order Number DE90520234. Source: NTIS (US Sales Only), PC A19/MF A01.

At the Photon Factory about 500 experiments are now running annually with about 50 experimental stations, the total operation time of the 2.5 GeV storage ring was 3400 hour in 1989, and the number of users was more than 2000, including 300 scientists from industry. This wide usage of synchrotron radiation has been supported by good performance of the accelerators. The positron beam current of the linac was increased for rapid injection (injection time: 20 min). The entire roof of the Light Source building was covered with thermal insulator (urethane-foam). This has greatly improved the beam stability of the ring. It has been operated at an initial ring current of 350 mA with a life time of 20 hours. Distinctive instrumentation at the Photon Factory has expanded to various fields such as angle-resolved ion-spectroscopy, dispersive EXAFS, trace impurity X-ray fluorescence analysis, plane-wave topography, structure analysis under high pressure, and imaging plates. Recently, experiments of protein structure analysis have been carried out extensively; Sakabe developed a new type of Weissenberg camera for protein crystallography, and about 50 experiments have been done for the past six months by a combination of Sakabe camera and imaging plates. The 2.5 GeV light source is now at an entrance of its harvest season. The TRISTAN Accumulation Ring has been used throughout this year in a time sharing basis with the TRISTAN experiment; twenty minutes for injection to TRISTAN Main Ring and 2 hours for SR experiment. The main subject has been magnetic Compton scattering with circularly polarized wiggler radiation. Such experiences enable us to expand our perspective for research in the following decade; we are investigating the possibility of operating the TRISTAN Main Ring at 6-8 GeV with 6000-pole undulaters, resulting in an extremely brilliant radiation source (Emittance: 0.1 nm·rad at 5 GeV with damping rings).

50204 (NIRS–26) **Annual report of National Institute of Radiological Sciences, April 1986 - March 1987.** National Inst. of Radiological Sciences, Chiba (Japan). Jul 1987. 118p. Order Number DE90520444. Source: NTIS (US Sales Only), PC A06/MF A01.

The Annual Report of April 1986-March 1987 provides the information on up-to-date research activities of the National Institute of Radiological Sciences (NIRS) in Japan. Researches undertaken in the NIRS aim at promoting medical application of radiation and at investigating health effects of radiation and radiation protection especially for the medical purpose. The research scope is therefore widely ranging from physics to genetics and from environmental science to clinical medicine. In addition to basic researches carried out by 14 research divisions, the following longterm projects which were organized by scientists recruited from several divisions are currently in progress: (1) biological effects of tritium; (2) stochastic effects of radiation and risk estimation; (3) assessment of human exposure to environmental radiation; and (4) medical use of accelerated heavy ions. This volume is divided into the following scientific categories for ease of reader's understanding: physics, chemistry, biochemistry and biophysics, cell biology, immunology and hematology, pathology and physiology, genetics, clinical research, and environmental science, covering a total of 97 titles. Activities of each research division and organization of the NIRS are given in Appendices. (N.K.).

50205 (NIRS–27) **Annual report of National Institute of Radiological Sciences, April 1987 - March 1988.** National Inst. of Radiological Sciences, Chiba (Japan). Jul 1988. 118p. Order Number DE90520443. Source: NTIS (US Sales Only), PC A06/MF A01.

The Annual Report of April 1987-March 1988 provides the information on up-to-date research activities of the National Institute of Radiological Sciences (NIRS) in Japan. Researches undertaken in the NIRS aim at promoting medical application of radiation and at investigating health effects of radiation and radiation protection. The research scope is therefore widely ranging from physics to genetics and from environmental science to clinical medicine. In addition to basic researches carried out by 14 research divisions, the following three longterm projects which were organized by scientists recruited from several divisions are currently in progress: (1) stochastic effects of radiation and risk estimation; (2) assessment of human exposure to environmental radiation; and (3) medical use of accelerated heavy ions. Projects (1) and (2) were finalized in this fiscal year. This volume is divided into the following scientific categories for ease of reader's understanding: physics, chemistry, biochemistry and biophysics, cell biology, immunology and hematology, pathology and physiology, genetics, clinical research, and environmental science, covering a total of 93 titles. Activities of each research division and organization of the NIRS are given in Appendices. (N.K.).

50206 (NIRS-AR–31) **Annual report of National Institute of Radiological Sciences of the fiscal year 1987.** National Inst. of Radiological Sciences, Chiba (Japan). Dec 1988. 252p. (In Japanese). Order Number DE90520440. Source: NTIS (US Sales Only), PC A12/MF A01.

This annual report presents the activities of the National Institute of Radiological Sciences in Japan in the fiscal year 1987. The activities are divided into research, technical aids, training, medical services, management, library or editing, and international cooperation. Research activities are described under the following sections: (1) 5-year special projects concerning 'stochastic effects of radiation and risk estimation', 'assessment of human exposure to environmental radiation' and 'medical use of accelerated heavy ions'; (2) 6 titles in assigned research; (3) 60 titles in ordinary research covering physics, chemistry, biology, genetics, pathology and physiology, cell biology, internal exposure, environmental science, clinical research, clinical research for radiation injuries, medical use of heavy particles, environmental radiation ecology, and aquatic radiation ecology; (4) risk estimation of radiation; (5) actual surveys for Bikini victims, population doses of medical and occupational exposure, and thorotrast exposure; (6) project research; (7) radioactivity survey; (8) research supported by Science and Technology Agency aids. An outline of technical aids is given in terms of technical services, radiation safety, animal and plant management, and cyclotron management. Appendices give publications, organization, and staff. (N.K.).

50207 (OUP–90-10) **Section for nuclear physics and energy physics - Annual report 1989: January 1 - December 31, 1989.** Oslo Univ. (Norway). Fysisk Inst. Apr 1990. 83p. Order Number DE91602692. Source: NTIS (US Sales Only), PC A05/MF A01; OSTI; INIS.

The experimental activities in nuclear physics have in 1989 mainly been centered around the cyclotron laboratory with the Scanditronic MC-35 cyclotron. The installation of the CACTUS multidetector system has been completed. With 8 particle telescopes,

28 NaI detectors and 2 Ge detectors, this experimental arrangement represents a major improvement compared to earlier set-ups in the laboratory. Theoretical studies of manybody problems, and nuclear structure and reactions have continued. The study of problems related to the foundations of quantum mechanics has also been persued.

50208 (UJV–9040-V) **List of publications 1989.** Ustav Jaderneho Vyzkumu CSKAE, Rez (Czechoslovakia). Jan 1990. 57p. (In Czech, English). Order Number DE91602691. Source: NTIS (US Sales Only), PC A04/MF A01; OSTI; INIS.

A list is given of reports, journal articles (published or submitted for publication), theses, conference papers, patents, and reports for internal use, published in 1989 by staff members of the Nuclear Research Institute in Rez, Czechoslovakia. (P.A.).

50209 (AD-A–222466/5/XAB) **Supercomputer work-station communication. Special report.** Katz, A.; Casner, S. University of Southern California, Marina Del Rey, CA (USA). Information Sciences Inst. Jun 1989. 27p. Contract MDA903-87-C-0719. (ISI/SR–89-235). Source: NTIS, PC A03/MF A01.

This is the final report of the Supercomputer Workstation Communication (SWC) project. The project explored new techniques for using high-capacity networks to communicate between personal workstations and remote supercomputers. The effort involved evaluation and testing of standard IP/TCP-based protocols, as well as newer remote window protocols such as MIT's X Window System and Sun Microsystems' NeWS. The DARPA Wideband Satellite Network provided the high-capacity, long-distance communication path for many of these tests. Additional areas of research included a preliminary study of a proposed Intelligent Communication Facility and an investigation of the current and future user requirements of the scientific community that will use supercomputers.

50210 (AD-A–222798/1/XAB) **Superconcurrent processing: A dynamic approach to heterogeneous parallelism. Final report.** Freund, R.F. Naval Ocean Systems Center, San Diego, CA (USA). Mar 1990. 19p. (NOSC/TD–1781). Source: NTIS, PC A03/MF A01.

There is a growing concensus among supercomputer scientists that super-speed computers of the future will be parallel processors, since the traditional vector processors are only able to pipeline out one or a few results per cycle. Parallel processors and the parallel machines were in such an experimental state that it still made sense to look to vector processing for practical supercomputing. Both of those conditions are changed today, providing computational scientists with the occasion to begin to realize the full power of parallel processing. As we start to do this, however, we realize that while vector processors are basically all very similar to each other, parallel architectures present a wide variety of types. It seems quite unlikely that one of these types will be ideal for a wide range of types. It seems quite unlikely that one of these types will be ideal for a wide range of problems. For that reason, a number of computational scientists are looking at distributed heterogeneous processing as a potential solution. Superconcurrency is one approach to this form of computing.

50211 (AD-A–223072/0/XAB) **Language support for parallel computation. Final report, September 1988-September 1989.** Ramamoorthy, C.V. California Univ., Berkeley, CA (USA). Computer Science Div. Apr 1990. 212p. Contract F30602-88-D-0027. Source: NTIS, PC A10/MF A02.

This final technical report summarizes the research accomplished under the Expert Science and Engineering (ES&E) program by the University of California at Berkeley through Syracuse University. The research effort, entitled Parallel Extensions for Object Oriented Programming, examined communication aspects leading to language support for parallel computation. The work undertaken in this effort has extended concurrent programming languages in their communication primitives. Although many abstraction mechanisms have been used in programming languages, including control abstraction mechanisms (such as procedures) and data abstraction mechanisms (such as data types), communication abstraction mechanisms have been found to be the most useful for parallel/concurrent programming paradigms. Work accomplished in this effort has extended those mechanisms, concentrating on interprocess communication. A formal model for concurrent systems, called the Synchronous Token-based Communicating State (STOCS) model, has been used to model and analyze concurrent systems. Since present concurrent languages do not support any form of analysis of the communication structure of programs, two new constructs based on STOCS formalism have been developed to support high level specification - handshake and unit. A fair and efficient algorithm for execution of multi-process shared events is also presented.

50212 (ANL/TM–423-Rev.2) **Conversational Monitor System (CMS) at Argonne National Laboratory (ANL): Revision 2.** Hull, W.E. (ed.); Thommes, M.M.; Gallo, M.A. Argonne National Lab., IL (USA). Aug 1990. 61p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE90018020. Source: NTIS, PC A04/MF A01 - OSTI; GPO Dep.

This report is a manual on using CMS on the IBM 3084 at Argonne National Laboratory. The chapters within include: getting started; getting help and information; managing your minidisks; using local utility execs; transferring files between CMS and no other computers; using CMS electronic mail at ANL; using magnetic tapes in CMS; programming in CMS; using software available at ANL in CMS; using the z-disk user-contributed software; and submitting batch jobs from CMS.

50213 (CONF-901101–24) **Parallel performance models for the nodal transport method on the hypercube.** Azmy, Y.Y. Oak Ridge National Lab., TN (USA). [1990]. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From American Nuclear Society winter meeting; Washington, DC (USA); 11-15 Nov 1990. Order Number DE90015162. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In this paper, we derive and validate a parallel performance model for a previously derived parallel algorithm used in solving the nodal transport method equations with zero- and first-order spatial approximations.

50214 (CONF-901150–1) **A unified framework for credit assignment.** Liepins, G.E. (Oak Ridge National Lab., TN (USA)); Sutton, R.S. Oak Ridge National Lab., TN (USA). [1990]. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From IEEE conference on neural information processing: natural and synthetic; Denver, CO (USA); 26-29 Nov 1990. Order Number DE90011636. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Credit assignment is a central issue in a variety of connectionist paradigms including artificial neural networks and genetic classifier systems. For neural networks, credit assignment is implicit in the training algorithms used to update connection weights. In classifier systems, it is used to estimate rule strengths. This paper introduces a unifying framework that covers and helps explain the differences and similarities between a large number of approaches to credit assignment, including Q-learning, policy iteration, bucket brigade and profit sharing. Each of these can be formulated as a version of the Adaptive Heuristic Critic (AHC). 11 refs.

50215 (CONF-9002131–3) **Symbolic manipulation software and the study of differential equations.** Garbey, M.; Kaper, H.G.; Kwong, Man Kam. Argonne National Lab., IL (USA). 25 Jul 1990. 25p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. From Workshop on asymptotic analysis and numerical solution of partial differential equations; Argonne, IL (USA); 26-28 Feb 1990. Order Number DE90017674. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

In this note we describe some of our experiences with symbolic manipulation software for the analysis of differential equations. We give several examples from our work on semilinear diffusion equations and from a bifurcation analysis of a nonlinear problem in combustion. 25 refs.

50216 (FNAL-TM–1679) **CANVAS: C++ objects for easy graphics on an Evans and Sutherland PS390 terminal: User's guide.** Michelotti, L.; Kick, R. Fermi National Accelerator Lab., Batavia, IL (USA). 27 Aug 1990. 19p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03000. Order Number DE90018018. Source: NTIS, PC A03/MF A01 - OSTI.

The C++ classes described in this note comprise an attempt to provide an object-oriented approach, and if there was ever a graphics terminal naturally suited to object-oriented programming, the PS390 is it. Since a canvas is not a program but a variable to be used in programs, users can write software to suit their particular needs. By simply declaring canvas variables the application program is provided with an object which accepts data and displays it automatically. Any number of canvases can be placed anywhere on the screen, so data can be viewed in a variety of ways simultaneously. Further, the "real-time" transformation capabilities of the PS390 are activated in one step by "connecting" its external devices, the dials and the puck, to the desired canvas. There is no need for the applications programmer to construct his own function networks, choose names for nodes, and do any of the other administrative tasks laid out in the manuals, including connecting the terminal to a host computer and initializing it. These are handled automatically by the canvases themselves, thus removing this clutter from the application program.

50217 (IFVE-OP–89-129) **Distributed computer system based on local area network ALISA in experimental investigations.** Kazakov, P.N.; Kardanev, A.B.; Sakharov, V.P. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 12p. (In Russian). Order Number DE91602599. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

A brief analysis of features construction of distributed computer system based on the Local Area Net (LAN) in the automized control of experimental investigations is given. The main characteristics of LAN hardware and ALISA software are presented. The realization of the distributed computer structure for automized experimental setups using CAMAC is described. 3 refs.

50218 (INS-T–496) **KODAQ (Kakuken On-line Data Acquisition System) based on PC-9801 personal computer.** Omata, Kazuo; Fujita, Yuzo. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Apr 1990. 38p. (In Japanese). Order Number DE90520261. Source: NTIS (US Sales Only), PC A03/MF A01.

A new software KODAQ (Kakuken On-line Data AcQuisition system) has been developed. The system is designed to take data with CAMAC, crate controller, input/output modules and interrupt module are necessary as a standard hardware setup, and PC-9801 personal computer. The functions of the system are defined by two files. One is KODAQ command file, and the other is CAMAC configuration/monitoring file written in a C language. These two files can easily be rewritten to fulfill the various experimental requirements. Except for a part of high-speed processing of input data, users can define computer resources and their functions logically. For this reason users can describe the system in simple and easy expressions. Useful functions are defined as a basic command and some of the commands are controlled with special function keys of PC-9801. Moreover the system can be easily extended using a command redefinition function. In this report, we describe the procedure for operating the system and the KODAQ commands. (author).

50219 (ITEF–88-89) **GITTAM program for numerical simulation of one-dimensional targets TIS. Part 2: 2. Description of algorithm and program.** Arpishkin, Yu.P.; Basko, M.M.; Sokolovskij, M.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 28p. (In Russian). Order Number DE91602685. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

A finite-difference algorithm for numeric solution of a system of one-dimensional hydrodynamics equation with heat conductivity, radiation diffusion and thermonuclear combustion is considered. The algorithm presented allows one to simulate one-dimensional thermonuclear targets for heavy-ion synthesis (HIS), irradiated with heavy ion beams. A brief description of a complex of GITTAM programs in which finite-difference algorithm for one-dimensional thermonuclear HIS target simulation is used, is given. 5 refs.; 3 figs.

50220 (IYaF–88-23) **Software for the ODRA and ODRENOK computers; programs for text file processing.** Kozak, V.R. AN SSSR, Novosibirsk (USSR). Inst. Yadernoj Fiziki. 1988. 35p. (In Russian). Order Number DE91602686. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

Text editor EDIT, text processor GIRL text printing programs using standard (KISS) and arbitrary (PRIN) type faces, device for copying from a graphic display to graphic LDZM printer are described. Text file structure for ODRA and ODRENOK. Computers, features of the described program developing are described. The appendix presents descriptions of all the programs, intended for the user. 5 refs.; 1 tab.

50221 (JAERI-M–90-068) **Monte Carlo codes and Monte Carlo simulator program.** Higuchi, Kenji (Japan Atomic Energy Research Inst., Tokai, Ibaraki (Japan). Tokai Research Establishment); Asai, Kiyoshi; Suganuma, Masayuki. Japan Atomic Energy Research Inst., Tokyo (Japan). Mar 1990. 68p. (In Japanese). Order Number DE90520265. Source: NTIS (US Sales Only), PC A04/MF A01.

Four typical Monte Carlo codes KENO-IV, MORSE, MCNP and VIM have been vectorized on VP-100 at Computing Center, JAERI. The problems in vector processing of Monte Carlo codes on vector processors have become clear through the work. As the result, it is recognized that these are difficulties to obtain good performance in vector processing of Monte Carlo codes. A Monte Carlo computing machine, which processes the Monte Carlo codes with high performances is being developed at our Computing Center since 1987. The concept of Monte Carlo computing machine and its performance have been investigated and estimated by using a software simulator. In this report the problems in vectorization of Monte Carlo codes, Monte Carlo pipelines proposed to mitigate these difficulties and the results of the performance estimation of the Monte Carlo computing machine by the simulator are described. (author).

50222 (KCP–613-4118) **Software quality assurance handbook.** Allied-Signal Aerospace Co., Kansas City, MO (USA). Kansas City Div. Sep 1990. 79p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00613. Order Number DE91000060. Source: NTIS, PC A04/MF A01 - OSTI; GPO Dep.

There are two important reasons for Software Quality Assurance (SQA) at Allied-Signal Inc., Kansas City Division (KCD): First, the benefits from SQA make good business sense. Second, the Department of Energy has requested SQA. This handbook is one of the first steps in a plant-wide implementation of Software Quality Assurance at KCD. The handbook has two main purposes. The first is to provide information that you will need to perform software quality assurance activities. The second is to provide a common thread to unify the approach to SQA at KCD. 2 figs.

50223 (KEK–89-26, pp. 183-200) **Advanced computer program (ACP) at KEK.** Yasu, Yoshiji (National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan)). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Mar 1990. (CONF-8903226–: Symposium on data acquisition and processing for next generation experiments, Tsukuba (Japan), 9-10 Mar 1989). In *Proceedings of symposium on data acquisition and processing for next generation*

experiments. Order Number DE90508151. Source: NTIS (US Sales Only), PC A11/MF A01.

The paper describes what is the ACP, the performance and the next generation of ACP. The first generation of ACP is being used at KEK for studying parallel processing and actual job like physics simulations while it's used at many laboratories of high energy physics in the world. Then, the next generation of ACP is being developed for getting more high performance. (author).

50224 (LA-UR–90-2564) **Performance evaluation of the IBM RISC [reduced instruction set computer] System/6000: Comparison of an optimized scalar processor with two vector processors.** Simmons, M.L.; Wasserman, H.J. Los Alamos National Lab., NM (USA). [1990]. 11p. Sponsored by U.S. DOE Management & Administration. DOE Contract W-7405-ENG-36. (CONF-901121–5: Association for Computing Machinery/Institute of Electrical and Electronics Engineers supercomputing conference, New York, NY (USA), 12-16 Nov 1990). Order Number DE90015058. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

RISC System/6000 computers are workstations with a reduced instruction set processor recently developed by IBM. This report details the performance of the 6000-series computers as measured using a set of portable, standard-Fortran, computationally-intensive benchmark codes that represent the scientific workload at the Los Alamos National Laboratory. On all but three of our benchmark codes, the 40-ns RISC System was able to perform as well as a single Convex C-240 processor, a vector processor that also has a 40-ns clock cycle, and on these same codes, it performed as well as the FPS-500, a vector processor with a 30-ns clock cycle. 17 refs., 2 figs., 6 tabs.

50225 (LA-UR–90-2577) **A Monte Carlo boundary propagation method for the solution of Poisson's equation.** Hiromoto, R.; Brickner, R.G. Los Alamos National Lab., NM (USA). [1990]. 6p. Sponsored by U.S. DOE Management & Administration. DOE Contract W-7405-ENG-36. (CONF-901101–22: American Nuclear Society winter meeting, Washington, DC (USA), 11-15 Nov 1990). Order Number DE90015060. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

To often the parallelism of a computational algorithm is used (or advertised) as a desirable measure of its performance. That is, the higher the computational parallelism the better the expected performance. With the current interest and emphasis on massively parallel computer systems, the notion of highly parallel algorithms is the subject of many conferences and funding proposals. Unfortunately, the "revolution" that this vision promises has served to further complicate the measure of parallel performance by the introduction of such notions as scaled speedup and scalable systems. As a counter example to the merits of highly parallel algorithms whose parallelism scales linearly with increasing problem size, we introduce a slight modification to a highly parallel Monte Carlo technique that is used to estimate the solution of Poisson's equation. This simple modification is shown to yield a much better estimate to the solution by incorporating a more efficient use of boundary data (Dirichlet boundary conditions). A by product of this new algorithm is a much more efficient sequential algorithm but at the expense of sacrificing parallelism. 3 refs.

50226 (LBL–26455, pp. 133) **Theory of atomic and molecular collision processes.** Miller, W.H. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

This research is primarily involved with the development and application of theoretical methods and models for describing atomic and molecular collision processes and chemical reaction dynamics. Specific topics of interest have included the theory of inelastic and reactive scattering, collision processes involving electronically excited atoms or molecules, collisional ionization phenomena, statistical theories of chemical reactions, scattering of atoms and molecules from surfaces, and the interactions of molecular systems with high-power laser radiation. Most recently, research has focused on the development of theoretical methods for a first-principles treatment of dynamics in polyatomic molecular systems. The goal is to develop approaches that can utilize ab initio quantum chemical calculations of the potential energy surface (in the Born-Oppenheimer approximation) as direct input into the dynamical treatment, and thus, to as great an extent as possible, have a truly predictive theory. The potential application of these methods is almost without limit. In this group hydrogen-atom transfer processes have been studied in a variety of systems. Other research groups have used these approaches to describe a variety of reactions that are relevant to the primary steps in combustion.

50227 (LBL–26455, pp. 133) **Monte Carlo path integration for the real-time propagator.** Makri, N.; Miller, W.H. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

Monte Carlo methods are described for evaluating the Feynman path-integral representation of the (real-time) propagator (time-evolution operator), $\exp(-iHt/h)$. The approach is based on the modified Filinov algorithm presented earlier by Makri and Miller. Numerical calculations are presented for time evolution in a symmetric double-well potential, as well as in a Morse potential.

50228 (LBL–26455, pp. 133) **Effect of fluctuations in state-specific unimolecular rate constants on the pressure dependence of the average unimolecular reaction rate.** Miller, W.H. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

The standard (i.e., Lindemann mechanism, strong-collision assumption, etc.) treatment of thermal unimolecular reactions expresses the effective, pressure-dependent unimolecular rate constant (usually called k_{uni}) in terms of the average unimolecular rate constant for a given total energy, k(e) (and, more rigorously, for a given total angular momentum). Several experimental and theoretical studies have shown, however, that unimolecular rate constants for individual quantum states (all of essentially the same total energy and angular momentum) can have significant variations about the average rate, i.e., a significant degree of state specificity. This paper examines the effect that these fluctuations have on the effective, pressure-dependent rate, k_{uni}. The general result is that fluctuations reduce the rate, most prominently at high pressures.

50229 (LBL–26455, pp. 133-134) **A diabatic reaction-path Hamiltonian.** Miller, W.H.; Ruf, B.A.; Chang, Y.T. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

A reaction-path Hamiltonian is constructed that is based on a straight-line, least-motion path that interpolates linearly between equilibrium reactant and product geometries of the molecular systems. Conservation of linear and angular momentum are correctly accounted for. The resulting Hamiltonian has a Cartesian-type kinetic energy, the coriolis coupling terms originally present in the kinetic energy having been transformed to potential energy coupling (hence the term diabatic reaction-path Hamiltonian). Curvature-coupling terms that appears in the original reaction-path Hamiltonian, which is based on the minimum-energy reaction path, are absent here because the present reaction path is straight. This new, diabatic reaction-path Hamiltonian should be especially useful for describing H-atom transfer reactions in polyatomic systems, a case for which the minimum-energy reaction path provides a poor description.

50230 (LBL–26455, pp. 134) **Correct short-time propagator for Feynman path integration by power-series expansion in Δt.** Makri, N.; Miller, W.H. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

The most commonly used short-time propagator in a discretized Feynman path integral (and also several more sophisticated improved ones) is not correct through first order in the time increment Δt. The correct semiclassical result for the phase (i.e., the action) of the short-time propagator is developed in this paper as a power series in Δt, explicit expressions being given for the terms of order Δt^{-1}, Δt^{1}, and Δt^{3}. The proposed expression is also the correct quantum mechanical result through order Δt_2. Test applications to the standard harmonic oscillator and also to a double-well potential

(typical for intramolecular H-atom transfer) show the first-order propagator (i.e, the correct result through order Δt) to be a significant improvement over previous ones; inclusion of the third-order term gives considerable additional improvement (i.e., faster convergence).

50231 (LBL–26455, pp. 134-135) **Work in progress.** Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

A new kind of semiclassical tunneling model is being developed for use in classical trajectory simulations of polyatomic dynamical processes. Although much is known about rigorous semiclassical approximations to quantum mechanics, the goal of the present work is a simple-to-use, necessarily approximate model that can be implemented within the framework of a standard trajectory simulation. Applications to multidimensional models of H-atom transfer reactions show that such models can be usefully accurate.

50232 (LBL–26455, pp. 183) **Explicit approximations to the mean spherical approximation (MSA) for electrolyte systems with unequal ion sizes.** Harvey, A.H.; Copeman, T.W.; Prausnitz, J.M. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

A systematic investigation is presented for explicit approximations to the MSA for ionic systems with ions of different size. Solution of the exact MSA for this case requires an implicit solution for the screening parameter; that implicit feature makes it particularly undesirable for use in iterative equation-of-state calculations. This work first compares with the exact MSA solution, an approximation based on a linear mixing rule for a single effective ion size, and second, a low-ion-density approximation due to Copeman and stein. These comparisons are for the electrostatic contributions to the Helmholtz energy, the pressure, and the chemical potentials because these quantities are of primary interest in phase-equilibrium calculations using an equation of state. Over a wide range of reduced temperatures, reduced densities, and ion-diameter ratios, the simple linear rule produces good results. However, for diameter ratios differing greatly from unity, better results are obtained at low ion densities from the method of Copeman and Stein. Comparison with published Monte Carlo data suggests that, when the MSA is used for the primitive model applied to aqueous electrolyte solutions, little error is introduced by the use of these approximations.

50233 (LBL–26455, pp. 127-128) **Damped-core quantum Monte Carlo: An effective treatment for large-z systems.** Hammond, B.L.; Reynolds, P.J.; Lester, W.A. Jr. Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

In the past several years increasing attention has focused on quantum Monte Carlo (QMC) methods for obtaining atomic, molecular, and chemical properties, including electronic structure. QMC is a method of solving the Schroedinger equation stochastically, and with suitable algorithms, exactly. Results obtained have been remarkably accurate and account explicitly for correlation effects. Recently, workers have begun to explore ways that treat only valence electrons motivated by the steep dependence on nuclear charge Z of the computation time required to reduce statistical uncertainties to the level of chemical accuracy. The core energy rises as Z^2, and, closely related, the time steps that may be taken in the simulations decrease as Z^2 due to the reduced phase space of the core electrons. In damped-core QMC the authors introduce a random-walk (QMC) method in which the core is treated separately from the valence space, although still by a Monte Carlo method, and valence energies are computed directly. The authors calculate ionization potentials and electron affinities of C, Si, and Ge, and find excellent agreement with experiment. Effective speedup over standard QMC approaches is estimated to be as large as a factor of 5,000.

50234 (LBL–26455, pp. 206-207) **Work in progress.** Lawrence Berkeley Lab., CA (USA). Jul 1989. In *Materials and Chemical Sciences Division annual report, 1988.* Order Number DE90003301. Source: NTIS, PC A11/MF A01.

A model that will permit the quantitative interpretation of experimental obervations of solid polymer electrolytes is being developed. More specifically, the model will help in determining fundamental transport properties from transient and steady-state experiments. A mathematical model of the Na/$FeCl_2$ battery has been developed. The model predicts the cell voltage as a function of the state of discharge and has been useful in showing porosity and volume fraction profiles and how they can affect cycle life. A model that uses Duhamel's theorem to simulate cyclic-voltammetry experiments at stationary and rotating-disk electrodes is being improved. Inductance effects found in high-power batteries are being investigated. Results from simplified and highly idealized systems have provided insight into how a realistic model should be developed. A mathematical model of the electrode/electrolyte interface is being developed to calculate the frequency response of a rotating disk. The algorithm accounts for the effect of surface coverage owing to specific adsorption and charge-transfer reactions. Ring-disk electrodes are being used to investigate porous ferrous sulfate films that form during the dissolution of iron in sulfuric acid solutions. A theoretical investigation of the growth and dissolution of salt films is under way. Laplace's equation arises in the description of many systems. Its solution is often expensive and difficult to obtain accurately. Tools are being developed that will facilitate its numerical solution. Additional work includes an experimental and theoretical impedance study of redox reactions in porous flow-through electrodes and studies of corrosion processes, with an emphasis on developing criteria for adequate corrosion protection.

50235 (MLM–3656(OP)) **Interfacing a personal computer to an analog scanning electron microscopy for storing images on optical disks.** Ransick, M.H.; Barklay, C.D. 50236 (NEI-FI–119) **An information system for 20 kV electricity distribution networks integrated to telecontrol and automation.** Etula, H.J. (Espoon Saehkoe, Espoo (Finland)); Lakervi, E.; Kaerkkaeinen, S.; Haemaelaeinen, P. Kauppa-ja Teollisuusministerio, Helsinki (Finland). Energiaosasto. 1989. 84p. (In Finnish). Project KTM-202/881/85. Order Number DE90518708. Source: NTIS (US Sales Only), PC A05/MF A01.

In the project has been developed a graphic information system for electrical distribution networks. The system provides a real time data link with the supervisory control (SCADA) system. The network information system is a common 20 kV and 0.4 kV information system for designers, builders and operators. System includes functions for updating and producing network diagrams, maps and drawings. Load flow calculation is based on statistical load demand curves for different customer categories. The calculation provides the network operation and the distribution analysis in daily situations. In the fault calculation protection relay settings are checked. Results of the calculations are illustrated by colouring feeders and sections or by presenting load curves of the components pointed. An important basic application is the real time management of switching status of the 20 kV network in the control room. The status changes of the switchgears operated manually are interactively updated on graphic diagrams on the screen. The status changes transmitted from SCADA are updated automatically. Dynamic colouring of topographical diagrams and substation scemes is used to outline network connections e.g. feeders and earthed sections. Other operational aids are switching log, planning of switching programs, registers for priority customers and management of fault information. The link to the SCADA is one way link. The status data is transmitted spontaneously and the measuring data cyclically. Customer related data and background maps from administrative systems are transmitted in batch prosessing. VAXstations have been used as a developement environment. Operation system can be VMS or UNIX. User interface is

X-Window. Database is a common relational database, which is widely used in the company. The virtual memory concept is used to accelerate communication with the relational database.

50237 (ORNL/TM–11637) **Modeling histogram data with piecewise polynomials.** Worley, P.H. Oak Ridge National Lab., TN (USA). Aug 1990. 37p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE90018037. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

As part of a research project on the performance characterization of parallel programs, piecewise polynomials are used to model histogram data that represents the processor utilization curve. In this paper an algorithm is described that generates a discontinuous piecewise polynomial model in time proportional to the amount of data.

50238 (PB–90-252727/XAB) **Controlling real-time systems with parallel processes.** Bron, C. Groningen Rijksuniversiteit (Netherlands). Computing Science Section. 1990. 23p. (CS–8918). Source: NTIS, PC A03/MF A01.

In the paper it is argued that the automatic control of industrial systems can be based on a structure of co-operating sequential processes. This form of control is obtained by means of a tight coupling between the (computer based) controlling processes (tasks), and the (physical) processes being controlled. The real-time aspects of this control merge naturally with the overall structure. A software package (ROSKIT) is described which supports this approach.

50239 (PNL-SA–18095) **Classification of acoustic emission waveforms for nondestructive evaluation using neural networks.** Barga, R.S.; Melton, R.B.; Friesel, M.A. Pacific Northwest Lab., Richland, WA (USA). Apr 1990. 13p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC06-76RL01830. (CONF-9003200–1: Society of photo-optical institution engineering (SPIE) applications of neural networks, Orlando, FL (USA), 16-19 Mar 1990). Order Number DE90017239. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Neural networks were applied to the classification of two types of acoustic emission (AE) events, crack growth and fretting, from a simulated airframe joint specimen. Signals were obtained from four sensors at different locations on the test specimen. Multilayered neural networks were trained to classify the signals using the error backpropagation learning algorithm, enabling AE events arising from crack growth to be distinguished from those caused by fretting. In this paper we evaluate the neural network classification performance for sensor location dependent and sensor location independent training and testing sets. Further, we present a new training strategy which significantly reduces the time required to learn large training sets using the error backpropagation learning algorithm, and improves the generalization performance of the network. 10 refs., 6 figs., 3 tabs.

50240 (SAND–90-1729C) **SICADS: Site Independent Configurable Alarm Display System.** Ashby, M.R.; Weissman, S.J. Sandia National Labs., Albuquerque, NM (USA). [1990]. 6p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-901101–5: American Nuclear Society winter meeting, Washington, DC (USA), 11-15 Nov 1990). Order Number DE90013074. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

SICADS is a generic command, control and display software package which provides the capability to generate security systems which employ different hardware and system configurations, but which are controlled by the same software. SICADS was designed to avoid the task of developing new software for each site. By reusing software, expenses are reduced and software quality is increased. Tested software can be reused without modifications. Configurations of security systems vary from site to site. In many systems, a seemingly minor change in configuration has required significant software modifications. SICADS has been designed to isolate site specific information into data files so that it can be easily tailored to fit a site's requirements without changing the software. Using SICADS, it is possible to generate systems which distribute processing and control over several computers and consoles. 1 fig.

50241 (SAND–90-2034C) **An adaptive finite element technique using element equilibrium and paving.** Blacker, T.D.; Jung, J.; Witkowski, W.R. Sandia National Labs., Albuquerque, NM (USA). [1990]. 30p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-901109–10: International symposium on gas-liquid two-phase flows in conjunction with the winter annual meeting of the American Society of Mechanical Engineers, Dallas, TX (USA), 25-30 Nov 1990). Order Number DE90015829. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper presents an adaptive finite element technique to automatically control analysis errors. This scheme uses a new error measure and the paving meshing algorithm. With this technique, a 2-D finite element problem can be adaptively meshed to produce an answer within a desired error tolerance. In this paper we describe the new error measure as well as the paving mesh generation technique. We then describe the process of controlling the mesh generation with the error measure and present several examples that demonstrate the capacity of this adaptive technique. 19 figs., 3 tabs.

50242 (UCRL–102263-Rev.2) **SISAL versus FORTRAN: A comparison using the Livermore Loops: Revision 2.** Cann, D.; Feo, J. Lawrence Livermore National Lab., CA (USA). Apr 1990. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-901121–1: Association for Computing Machinery/Institute of Electrical and Electronics Engineers supercomputing conference, New York, NY (USA), 12-16 Nov 1990). Order Number DE90010872. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The acquisition of parallel processors in the scientific community is increasing, but the difficulties of programming parallel machines persist. Two approaches have emerged: automatic parallelizing compilers for extant languages, and new languages that provide an easier-to-use and cleaner parallel programming model. Unfortunately most new languages have acquired a reputation for inefficiency because of their semantics. This paper compares the performance of SISAL, an applicative language for parallel numerical computations, and FORTRAN using the Livermore Loops. Our intent is to show that applicative programs when compiled using a set of powerful yet simple optimization techniques can achieve sequential execution speeds comparable to FORTRAN, and automatically exploit conventional shared memory multiprocessors. 25 refs., 4 figs., 1 tab.

50243 (UCRL-JC–103573) **What do you do when the network is 1 to 2 orders of magnitude faster than the backplane bus?.** Abrahams, S. Lawrence Livermore National Lab., CA (USA). Apr 1990. 9p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-901121–2: Association for Computing Machinery/Institute of Electrical and Electronics Engineers supercomputing conference, New York, NY (USA), 12-16 Nov 1990). Order Number DE90011231. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The prototype High Performance Switching System will connect several different types of machines with widely varying clock and internal bus speeds. At one end of the range we have a CRAY YMP and a CRAY XMP whose HPPI interface will operate at the 1 gigabaud rate. At the other end there are SUN 3/260 VMEbus machines (we are connecting to these machines simply because we own so many of them). In between there are various flavors of MAC IIs. This presents a real speed matching problem. The SUN VMEbus speed is approximately I megabyte per second with bursts to 13 megabytes, the MAC II NU-BUS obtains about the same speed. Compared to the switch speed of 100 megabytes per second these guys are standing still! So what do you do when the network is 1 to 2 orders of magnitude faster than the internal bus? This paper describes the approach LLNL and Ancor Communications took in the case of the SUN VMEbus machine.

50244 (UCRL-JC–104493) **IGES efficiency evaluation.** Christensen, M.; Farrell, J.; Green, S. Lawrence Livermore National Lab., CA (USA). Jul 1990. 28p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-901179–1: CUBE: computer use by engineers symposium, Santa Fe, NM (USA), 27-30 Nov 1990). Order Number DE90015192. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This report describes the Initial Graphics Exchange Specifications (IGES) Efficiency Study, a joint effort of Weapons Engineering Division (WED) and Materials Fabrication Division (MFD). The goal of the study was to quantify the impact of accurate geometry in design, manufacturing and inspection of mechanical parts. Two parts were designed, manufactured and inspected; a hemispherical and non-hemispherical part. Each part was designed in WED using CAD. Then three sources of numerical control (NC) tool paths and inspection probe paths were received in MFD: (1) an unchecked CAD/IGES database, (2) a guaranteed CAD/IGES database, (3) an electronic Hewlett-Packard Graphics Language (HPGL) file presenting the CAD drawing. 4 tabs.

50245 The single-chip FASTBUS slave interface. Nelson, R.O.; Machen, D.R.; Downing, R.W. *IEEE Transactions on Nuclear Science (Institute of Electrical and Electronics Engineers) (USA)*, 37(2): 310-314 (Apr 1990). (CONF-900143–: Institute for Electronic and Electrical Engineers (IEEE) nuclear science symposium, San Francisco, CA (USA), 15-19 Jan 1990).

This paper reports a single-chip implementation of the general-purpose FASTBUS slave interface (FSI) developed in ECL gate-array technology. The FSI will occupy on 1.6% of the available circuit board space while providing a complete 32-bit interface to the FASTBUS. All mandatory slave-interface requirements of IEEE 960 are supported, in addition to several non-mandatory requirements and the optional, extended MS code features. Geographic, logical, and broadcast addressing are implemented using on-chip registers. An optional multiple-module addressing technique is included that allows participating modules residing on a common crate or cable segment to respond as if individually addressed in sequence.

50246 Ultra-fast voltage comparators for transient waveform analysis. Smith, R.C. (Los Alamos National Lab., NM (USA)); Turko, B.T.; Kolbe, W.F. *IEEE Transactions on Nuclear Science (Institute of Electrical and Electronics Engineers) (USA)*, 37(2): 424-429 (Apr 1990). DOE Contract AC03-76SF00098 ;W-7405-ENG-36. (CONF-900143–: Institute for Electronic and Electrical Engineers (IEEE) nuclear science symposium, San Francisco, CA (USA), 15-19 Jan 1990).

The time at which an input signal crosses the reference level of a voltage comparator can be used in the analog-to-digital conversion of fast single waveform transients. In such a converter, an array of identical comparators, properly biased, provides stop inputs to a picosecond resolution multistop time digitizer. Each stop represents a point in the voltage-time reconstruction of the measured waveform. A number of state-of-the-art comparators, bipolar and GaAs, have been evaluated for this application to determine the differences in their time propagation as a function of the input signal overdrive and risetime. Normalized data is presented to assist in the correction of a digitizer's measurement errors. A picosecond time resolution measurement system used in the tests is also described.

50247 Dynamic processor self-scheduling for general parallel nested loops. Fang, Z. (Convex Computer Corp., Richardson TX (US)); Tang, P.; Yew, P.C.; Zhu, C.Q. *IEEE Transactions on Computers (Institute of Electrical and Electronics Engineers) (USA)*, 39(7): 919-929 (Jul 1990). Grant MIP-8410110.

This paper proposes a processor self-scheduling scheme for general parallel nested loops in multiprocessor systems. Parallel loops usually constitute most of the execution time in scientific application programs. In a general parallel loop structure, parallel loops, serial loops, and If-Then-Else constructs are nested in an arbitrary order, and the execution time of the loop body may vary substantially from iteration to iteration. In the proposed scheme, programs are instrumented to allow processors to schedule loop iterations among themselves dynamically at run time without the involvement of the operating system.

50248 The role of model based control in robotics. Harrigan, R.W. (Sandia National Labs., Albuquerque, NM (USA)). *IEEE Transactions on Nuclear Science (Institute of Electrical and Electronics Engineers) (USA)*, 37(3): 1426-1431 (Jun 1990). DOE Contract AC04-76DP00789. (CONF-900143–: Institute for Electronic and Electrical Engineers (IEEE) nuclear science symposium, San Francisco, CA (USA), 15-19 Jan 1990).

This paper discusses the use of model based control of industrial robots. Computer models of the robots and their operating environments are complemented with environmental sensing. This allows automatic programming of robot trajectories, hybrid force/position control and computer assist during manual operation. In addition, sensors detect error situations which may require operator attention prior to continued system operation.Computer models are also used to verify the validity of sensor data before the robotic system executes operations based upon those data.

50249 (ETDE/PUB–2) **International Energy: Subject Thesaurus.** Raridon, M.H. (ed.). Energy Technology Data Exchange, Oak Ridge, TN (USA). 1990. 1068p. Sponsored by Energy Technology Data Exchange. Order Number DE90008750. Source: NTIS, PC A99/MF A01 - OSTI.

The International Energy Subject Thesaurus contains the standard vocabulary to indexing terms (descriptors) developed and structured to build and maintain energy information databases. Involved in this cooperative task are (1) the technical staff of the USDOE Office of Scientific and Technical Information (OSTI) in cooperation with the member countries of the Energy Technology Data Exchange (ETDE) and (2) the International Nuclear Information System (INIS) staff representing the more than ninety countries and organizations recording and indexing information for the international nuclear information community. ETDE member countries are also members of the International Nuclear Information System (INIS). Nuclear information indexed and recorded for INIS by these ETDE member countries is also included in the ETDE Energy Data Base, and indexing terminology is therefore cooperatively standardized for use in both information systems. This structured vocabulary reflects the scope of international energy research, development, and technological programs and encompasses terminology derived not only from the basic sciences but also from the areas of energy resources, conservation, safety, environmental impact, and regulation.

50250 (IAEA-NDS–0(Rev.90/1)) **Index to the IAEA-NDS-Documentation Series.** Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Jan 1990. 16p. Order Number DE91602680. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

This index lists the current versions of the IAEA-NDS-documents which summarize contents and formats of nuclear data libraries available from the IAEA Nuclear Data Section. (author).

50251 (IAEA-NDS–7(Rev.90/1)) **Index of data libraries available on magnetic tape from the IAEA Nuclear Data Section.** Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Jan 1990. 23p. Order Number DE91602682. Source: NTIS (US Sales Only), PC A03/MF A01; OSTI; INIS.

This document lists more than 80 nuclear data libraries and some atomic data libraries together with references that give more detailed information about these libraries. All data and documentation references are available upon request from the IAEA Nuclear Data Section, free of charge. (author).

50252 (IAEA-NDS–23(Rev.3)) **ENDF/B-4: General purpose file 1974. Summary of contents and documentation.** Schwerer, O. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Dec 1989. 10p. Order Number DE91602681. Source: NTIS (US Sales Only), PC A02/MF A01; OSTI; INIS.

This document summarizes contents and documentation of the 1974 version of the General Purpose File of the ENDF/B Library maintained by the National Nuclear Data Centre (NNDC) at the Brookhaven National Laboratory, USA. The Library contains numerical neutron reaction data for 90 isotopes or elements. The entire

Library or selective retrievals from it can be obtained on magnetic tape from the IAEA Nuclear Data Section. (author). 3 tabs.

50253 (KEK–89-26, pp. 84-99) **Data taking system for the FANCY.** Manabe, A. (Tsukuba Univ., Ibaraki (Japan). Inst. of Physics). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Mar 1990. (CONF-8903226–: Symposium on data acquisition and processing for next generation experiments, Tsukuba (Japan), 9-10 Mar 1989). In *Proceedings of symposium on data acquisition and processing for next generation experiments.* Order Number DE90508151. Source: NTIS (US Sales Only), PC A11/MF A01.

This paper describes a data taking system of the FANCY spectrometer used in the experiments of πAC collaboration (E90, E132, E133, E157, E173 and E187) at the 12 GeV PS.A readout system for a jet-chamber-type cylindrical drift chamber (CDC) in the FANCY is a multiprocessor system (10 CPU) with use of VME bus (VERSA Bus) and 680x0 microprocessors for fast data handling and for effective communication with a host computer. (author).

50254 (LA-UR–90-2637) **International english.** Amador, M. Los Alamos National Lab., NM (USA). [1990]. 26p. Sponsored by U.S. DOE Office of Administration and Human Resource Management. DOE Contract W-7405-ENG-36. (CONF-9009154–2: IEEE international professional communication conference, London (UK), 12-14 Sep 1990). Order Number DE90016719. Source: NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper is a presentation to the International Professional Communication Conference on International English. Presidence is taken from the Royal Society of London in 1667 to purify and simplify the English language. Because English has become the most spoken language in the world, the case in herein made to make it plainer and more easily learned. Technical communications is stressed. (FSD).

50255 (PNL-SA–17925) **Managing technical information in a multi-contractor environment.** Anderson, E.N. Pacific Northwest Lab., Richland, WA (USA). Jun 1990. 6p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC06-76RL01830. (CONF-9006168–1: INFOTECH '90: DOE technical meeting, Oak Ridge, TN (USA), 20-21 Jun 1990). Order Number DE90016337. Source: NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Expanded efforts to transfer federally-funded technology and the public's growing interest in the DOE's activities present challenges to managers of technical information (TI). The multi-contractor environment of the Hanford Site further complicates the picture. In an effort to strengthen the Site's TI program, representatives of the DOE's Richland Operations Office and its four Hanford contractors formed a Hanford Technical Information Council. Other TI managers may benefit from hearing how the council is dealing with the issues before it.

Corporate Author Index

This index lists the corporate authors responsible for issuing the documents in this publication which are identified primarily by report number. The corporate names are entered in standardized forms as defined in *DOE Energy Data Base: Corporate Author Entries* (DOE/TIC-4585). Each entry under a corporate name includes the document title and citation number. Three items of information may appear in parentheses: (1) an abbreviation to identify the document type, such as a report; (2) the country of publication, also abbreviated; and (3) the language of the document if non-English (R;US;In French). Author affiliations are not listed in this index.

Department of the Environment, London (UK)
VANDAL technical overview: VANDAL version 1.1, 15:48267 (R;GB)
VANDAL user guide. V. 1.1: Input and execution (VANDAL version 1.1), 15:48264 (R;GB)
VANDAL user guide. V. 1.2: Input and execution appendices (VANDAL version 1.1), 15:48265 (R;GB)
VANDAL user guide. V. 2.1: Output and error messages (VANDAL version 1.1), 15:48266 (R;GB)

Deutsche Forschungsanstalt fuer Luft- und Raumfahrt e.V. (DLR), Koeln (Germany, F.R.)
A computer program system for the analysis of 3-d steady flows in turbomachinery components, 15:49178 (R;DE;In German)

Deutsche Forschungsanstalt fuer Luft- und Raumfahrt e.V. (DLR), Koeln (Germany, F.R.). Bereich fuer Projekttraegerschaften
Metal-matrix composites - a promising alternative to conventional alloys, 15:48908 (R;DE)

DG Engineering, Inc., Livermore, CA (USA)
BWR [Boiling Water Reactor] Owners Group Intergranular Stress Corrosion Cracking Research Program: Executive summary: Phase 2 (1984–1988): Final report, 15:48528 (R;US)

Dijon Univ., 21 (France)
Modelization of the energy demand. Application to the OECD countries, 15:48697 (R;FR;In French)

Dillon (M.M.) Ltd., Ottawa, ON (Canada)
Report of the PCB Working Group, 15:49576 (R;CA)

E

Earth Resources Associates, Helena, MT (USA)
Alluvial valley floor identification and study guidelines. Final report, 15:48103 (R;US)

Ecole Nationale Superieure des Mines, 75 - Paris (France)
Development of an operating aid device for ground water heat pump system, 15:48768 (R;FR;In French)

Ecole Nationale Superieure du Petrole et des Moteurs (ENSPM), 92 - Rueil-Malmaison (France)
Modelization of the energy demand. Application to the OECD countries, 15:48697 (R;FR;In French)

EG and G Idaho, Inc., Idaho Falls, ID (USA)
A microprocessor based charge control system for the simultaneous charging of several batteries with one charge controller: Final report for 1989, 15:48839 (R;US)
Development of a detailed core flow analysis code for prismatic fuel reactors, 15:48572 (R;US)
Effect of calcium sulfate on pool boiling of enhanced heat transfer surfaces, 15:49180 (R;US)
Quantitative analysis of potential performance improvements for the dry PWR [pressurized water reactor] containment, 15:48667 (R;US)
Residual stress at fluid interfaces, 15:48870 (R;US)
Three-dimensional fluid flow in JFTOT [Jet Fuel Thermal Oxidation Tester], 15:49154 (R;US)

EG and G Mound Applied Technologies, Miamisburg, OH (USA)
Interfacing a personal computer to an analog scanning electron microscopy for storing images on optical disks, 15:50235 (R;US)

EG and G Rocky Flats, Inc., Golden, CO (USA)
Statistical calibration and periodic performance checks for segmented gamma scanning, 15:48393 (R;US)

EG and G Rocky Flats, Inc., Golden, CO (USA). Rocky Flats Plant
Anecdotal history of acoustic emission from wood, 15:50104 (R;US)

Electric Power Research Inst., Palo Alto, CA (USA)
BWR [Boiling Water Reactor] Owners Group Intergranular Stress Corrosion Cracking Research Program: Executive summary: Phase 2 (1984–1988): Final report, 15:48528 (R;US)
Cogeneration and independent power production: Market insight and outlook: Final report, 15:48750 (R;US)
DSM [Demand-Side-Management]: Transmission and distribution impacts: Volume 2, Application on spatial frequency analysis: Final report, 15:48749 (R;US)
Fabrication of axial stress corrosion cracks in Alloy 182 weld materials: Final report, 15:48529 (R;US)
Field evaluation of grillage foundation uplift capacity: Final report, 15:48674 (R;US)
Flue gas desulfurization (FGD) chemistry and analytical methods handbook: Volume 1, Process chemistry - Sampling, measurement, laboratory and process performance guidelines (Revision 1): Final report, 15:48514 (R;US)
Geothermal ground-loop preinstallation project at Walden Pond: Final report, 15:48780 (R;US)
Guide for the application and use of valves in power plant systems: Final report, 15:48602 (R;US)
Hydrogen water chemistry fuel surveillance at Dresden-2, 15:48530 (R;US)
International cooling-tower and spray pond symposium: Proceedings, 15:48601 (R;US)
Multiloop Integral System Test (MIST): Final report: MIST phase 4 tests: Volume 11, 15:48665 (R;US)
Multiloop Integral System Test (MIST): Final report: MIST Phase 4 tests, 15:48666 (R;US)
NUHOMS modular spent-fuel storage system: Design, licensing and construction, 15:48233 (R;US)
Solidification in cement of ion-exchange resins from LOMI [Low Oxidation State Metal Ion] decontamination: Final report, 15:48269 (R;US)
The effect of dissolved zinc on the transport of corrosion products in PWRs: Final report, 15:48544 (R;US)

Electricite de France (EDF), 75 - Paris (France)
DER 89: main facts, 15:48736 (R;FR;In French)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii
Analysis of inhomogeneities of reactor fuel assemblies using statistics criteria, 15:48596 (R;SU;In Russian)
Cosmic ray production in plasma z pinches, 15:49809 (R;SU;In Russian)
Diagnostics of impurity and neutral components of tokamak plasma by the resonance fluorescence method, 15:50130 (R;SU;In Russian)
Dissociative recombination of molecular ions H_2^+, 15:49875 (R;SU;In Russian)
Electron distribution function and rate constants of elementary processes in a tokamak near-wall plasma, 15:50128 (R;SU;In Russian)
Equilibrium of plasma filament with inhomogeneous field along on axis and without of longitudinal current, 15:50129 (R;SU;In Russian)
Filamentation in quark plasma at finite temperatures, 15:49925 (R;SU;In Russian)
FORTUN-88 physical module for calculation by Monte-Carlo method with microconstants on the estimated data file basis, 15:50054 (R;SU;In Russian)
Gas jet magnetic compression dynamics, 15:50124 (R;SU;In Russian)
Kinetic limitations on sausage compression of Z-pinches, 15:50122 (R;SU;In Russian)
Low-energy conversion electrons from primary fragments of uranium 235 fission by thermal neutrons, 15:50016 (R;SU;In Russian)
Methods of superchronous processing of signals in high-temperature plasma diagnostics, 15:50127 (R;SU;In Russian)
Nonlinear development of two-dimensional axial-symmetric MGD instability in a Z-pinch, 15:50123 (R;SU;In Russian)
Optimization of kinematically complete experiments in four-particle nuclear reactions by simulation method, 15:50027 (R;SU;In Russian)
Plane channeling and radiation of ultrarelativistic electrons in thick crystals, 15:50070 (R;SU;In Russian)
Possibility of using first collision probability method for solution of the problem of photon transport, 15:50125 (R;SU;In Russian)
Quasiequilibrium evolution of compact torus with toroidal field, 15:50176 (R;SU;In Russian)
Resonating-group method in calculations of low-energy reactions and n^4He scattering with realistic NN interactions, 15:50026 (R;SU;In Russian)
Statistical simulation of Coulomb collisions in a plasma, 15:50131 (R;SU;In Russian)
Strength function of xenon 127 and cross section of $^{127}I(\nu_e, e^-)^{127}Xe$ reaction, 15:50028 (R;SU;In Russian)
Study on centrifugal acceleration of hydrogen pellets, 15:50175 (R;SU;In Russian)
Study on the effect of main performance of Si-surface-barrier detectors of different area on the noise and timing parameters of a charged particle spectrometer, 15:49294 (R;SU;In Russian)
Study on the main performance of charged particle multichannel spectrometers at high input counting rates, 15:49295 (R;SU;In Russian)
Synthesis of oneparticle excitation from two giant quantum monopoles, 15:50093 (R;SU;In Russian)
Technique for calculation of electrostatic fields of high-current accelerator elements, 15:50174 (R;SU;In Russian)
TEMP-8 module. Calculation of reactor point kinetics with increased accuracy, 15:48595 (R;SU;In Russian)
Thermodynamics of steam-turbine cycle with minimum coolant flow rate, 15:48603 (R;SU;In Russian)
Thomson scattering equipment for investigation of plasma filament scrape-off layer at the T-10 tokamak, 15:50126 (R;SU;In Russian)
Unified geometric theory of gravitation and electromagnetism: 5. Gravitational collapse and scalar radiation, 15:49810 (R;SU;In Russian)
Vacuum polarization of electromagnetic field and electrodynamic processes on nucleus, 15:49897 (R;SU;In Russian)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki
Analysis of the reaction p-barp→Λ-barΛ near the threshold, 15:49940 (R;SU)
Cumulative K^--meson production by protons with energy of 10 GeV, 15:49988 (R;SU;In Russian)
Cumulative nucleon production in ^3Hep- and ^3Hp interactions at momenta of colliding nuclei 5 GeV/c, 15:49997 (R;SU;In Russian)
Experimental studying the altitude distribution of the $^{63}Cu(n,\gamma)$ reaction rates in the model of the TVR-M reactor core, 15:48627 (R;SU;In Russian)
Experimental studying the azimuthal-radial distributions of the $^{63}Cu(n,\gamma)$ reaction rates in the model of the TVR-M reactor core, 15:48628 (R;SU;In Russian)
Experimental studying the effects of horizontal experimental channels on the neutron field in the model of the TVR-M research reactor core, 15:48629 (R;SU;In Russian)
Floquet functions in accelerating-focusing channel with an arbitrary structure of a period, 15:49233 (R;SU;In Russian)
GITTAM code for numerical simulation of one-dimensional targets for heavy ion fusion. Part 1: Pt.1 System of equations, 15:50177 (R;SU;In Russian)
GITTAM program for numerical simulation of one-dimensional targets TIS. Part 2: 2. Description of algorithm and program, 15:50219 (R;SU;In Russian)
GITTAM program for numerical simulation of one-dimensional targets TIS. Part 3: 3. Testing calculations, 15:50178 (R;SU;In Russian)
Increase of strip beam emittance in linear focusing systems, 15:49234 (R;SU;In Russian)
Maximum compression of Z-pinch in a gas with high atomic number, 15:50150 (R;SU;In Russian)
Photoemulsion vertex detector at the SKIF installation, 15:49304 (R;SU;In Russian)
Possibility of experiments using radiation counters for test electron stability and Pauli principle violation in atoms, 15:49303 (R;SU;In Russian)
Production of high energy nuclei ^4He,^3He,^3H,^2H in interaction 10.1 GeV/c protons with Be,Al,Cu,Ta, 15:50032 (R;SU)
Quantization with acount of barrier permeability, 15:50098 (R;SU;In Russian)
Quantum chromodynamics with infinite number of vector mesons, 15:49941 (R;SU)
Sparking limit of the accelerating gap of the heavy ion accelerator, 15:49258 (R;SU)
Study on charge exchange and radiation resistance of carbon targets in the I-2 proton linear accelerator, 15:49257 (R;SU;In Russian)
Topics in low-energy p-barp interactions, 15:49942 (R;SU)
TRECD program for three-dimensional calculation of a heterogeneous reactor in dipole approximation, 15:48597 (R;SU;In Russian)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst.
Collective bands in actinide nuclei and rare-earth elements in the SU(3) scheme, 15:50025 (R;SU;In Russian)
FEhl pulse spectrometric neutron generator, 15:49228 (R;SU;In Russian)

Nuclear reaction cross sections recommended as the standards for neutron measurements, 15:49981 (R;SU;In Russian)
Study on beam injection systems of the EhGP-10M charge-exchange electrostatic accelerator, 15:49249 (R;SU;In Russian)
To the problem of optimization of external and integral iteration algorithm in diffusion calculation of nuclear reactor, 15:48594 (R;SU;In Russian)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij
Amplitude detector, 15:49255 (R;SU;In Russian)
Application of the high-current wire photodetector for Cherenkov radiation ring detecting: Recent progress and future development, 15:49297 (R;SU;In Russian)
Computer calculation of the powerful tube generator for accelerator HF power supply system, 15:49254 (R;SU;In Russian)
Determination of value of the $\sigma(\nu\text{-barn}\rightarrow\mu^{\pm}X)\sigma(\nu\text{-barp}\rightarrow\mu^{\pm}X)$ cross section ratio at neutrino energies up to 30 GeV, 15:49928 (R;SU;In Russian)
Digital Hall magnetometer, 15:49383 (R;SU;In Russian)
Distributed computer system based on local area network ALISA in experimental investigations, 15:50217 (R;SU;In Russian)
Excited quark production at ep and γp colliders, 15:49933 (R;SU)
Fast-cycling minidrift chamber with freon-14 (80%) and isobutan (20%) mixture, 15:49299 (R;SU;In Russian)
Fiber-optical systems in physical experiment technique. Part 1: Part 1: Concepts and components, 15:49378 (R;SU;In Russian)
Investigation of radiation stability of low-noise transistors, 15:49365 (R;SU;In Russian)
Massive straight-line string as a model of heavy quarkonium, 15:49932 (R;SU;In Russian)
Mathematical model and program for superconducting magnet mechanics study, 15:49256 (R;SU;In Russian)
Measurement of the longitudinal thermal conductivity for spiral tube-fin heat exchanger structure for helium facilities, 15:49181 (R;SU;In Russian)
Minidrift chambers. Operation with different gas mixtures, 15:49296 (R;SU;In Russian)
Model of chromoelectric charges confinement, 15:49930 (R;SU)
Numerical study of equation for gluonic cascade with recombination, 15:49936 (R;SU)
On energy dependence of the width and shape of the rapidity distribution of negatively charged particles, 15:49927 (R;SU;In Russian)
On integrating of a singular integro-differential equation, 15:50096 (R;SU;In Russian)
On interpreting the results of personnel dosimeter intercomparison, 15:49301 (R;SU;In Russian)
On mixing of states in relativistic-invariant theory, 15:49937 (R;SU;In Russian)
On POLEX experiment at UNK, 15:49278 (R;SU;In Russian)
One-gluon exchange approximation for quasipotential of two-quark interaction in quantum chromodynamics, 15:49929 (R;SU)
Perspectives of experimental study of electromagnetic form factors of unstable particles at UNK, 15:49911 (R;SU;In Russian)
Processing of the information from gamma detector at SIGMA-AJAX setup, 15:49307 (R;SU;In Russian)
Relativistic massive particle with higher curvatures as a model for description of bosons and fermions, 15:49935 (R;SU)
Single-time reduction of bethe-salpeter formalism for two-fermion system, 15:49966 (R;SU)
Spatial resolution of electromagnetic liquid krypton calorimeter: Monte-Carlo simulation, 15:49300 (R;SU;In Russian)
Specialized processor for particle momentum selection in the experiment to study of central hadron collisions, 15:49298 (R;SU;In Russian)
Strange meson mass spectrum in relativistic model for quasi-independent quarks, 15:49934 (R;SU)
Study on the $\pi^+\rightarrow\eta$ and $\pi^+\rightarrow\pi^0\pi^0$ exclusive processes on nuclei at 10.5 GeV/c, 15:49910 (R;SU;In Russian)
Supersymmetric version of horizontal gauge interactions, 15:49931 (R;SU)
The development and tests of high-power Y-circulator of the metre-wave range, 15:49253 (R;SU;In Russian)

Grambling State Univ., LA (USA). Dept. of Industrial and Engineering Technology
Redesigning local transportation service for improved suburban mobility: The problem of accessibility for the elderly and low-income residents. Final report, 1 January 1989-31 May 1990, 15:48803 (R;US)

Cogeneration and independent power production: Market insight and outlook: Final report, 15:48750 (R;US)

Ridgetown Coll. of Agricultural Technology, ON (Canada)
Growth room temperature control with water-source heat pumps, 15:48787 (R;CA)

Rijksinstituut voor Volksgezondheid en Milieuhygiene, Bilthoven (Netherlands)
Appendix to Report No. 758474011. Integrated criteria document PAH: Republication of Addendum to Report No. 758474007, March 1989. Effects of 10 selected compounds, 15:49725 (R;NL)
In-situ biorestoration of a subsoil contaminated with gasoline. Interim report, 15:48156 (R;NL)
Integrated criteria document: Asbestos effects, 15:49537 (R;NL)
Integrated criteria document: Asbestos effects. Appendix, 15:49722 (R;NL)
Integrated criteria document: PAHs, 15:49724 (R;NL)

RM Consultants, Abingdon (UK)
VANDAL technical overview: VANDAL version 1.1, 15:48267 (R;GB)

RMA Aerospace, Inc., Mountain View, CA (USA)
Development of a comprehensive magnetohydrodynamic model of solar-terrestrial interaction. Final report, 1 March 1986-30 September 1988, 15:49854 (R;US)

Royal Norwegian Council for Scientific and Industrial Research, Kjeller (Norway)
Stability of RMS Lg measurements and their potential for accurate estimation of the yields of Soviet underground nuclear explosions. Technical report, November 1989-31 January 1990, 15:49402 (R;NO)

Rutherford Appleton Lab., Chilton (UK)
Amplitude analysis of $\gamma\gamma \rightarrow \pi\pi$ from threshold to 1.4 GeV, 15:49957 (R;GB)
Muon spin relaxation study of protonic superionic conductor $CsHSO_4$, 15:50079 (R;SU)
Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989, 15:50182 (R;GB)

S

S-Cubed, San Diego, CA (USA)
Regional discrimination of quarry blasts, earthquakes and underground nuclear explosions. Final report, 23 March 1987-22 March 1989, 15:49403 (R;US)

Sairaalalitto, Helsinki (Finland)
Energy conservation and hospital hygiene, 15:48785 (R;FI;In Finnish)

San Jose State Univ., CA (USA)
Thin-film composite materials, Phase 2. Final report, 1 April-31 December 1986, 15:48948 (R;US)

Sandia National Labs., Albuquerque, NM (USA)
A Nuisance Alarm Data System for evaluation of intrusion detectors, 15:49379 (R;US)
A numerical study of convection in a layered porous medium heated from below, 15:48478 (R;US)
A program to qualify ductile cast iron for use as a containment material for Type B transport cask, 15:49165 (R;US)
A radiation hardened SONOS/CMOS EEPROM family, 15:49367 (R;US)
An adaptive finite element technique using element equilibrium and paving, 15:50241 (R;US)
An expert system for automated robotic grasping, 15:49164 (R;US)
An infrared imaging area sensor for tactical and physical security applications, 15:48394 (R;US)
Bench-scale testing of a heat-pipe receiver for solar thermal electric applications, 15:48470 (R;US)
Computer modeling of 12-inch actuator shock test performance, 15:49190 (R;US)
Development and test case application of a waste minimization project evaluation method, 15:48726 (R;US)
Development of hermetic microminiature connectors, 15:49217 (R;US)
Electric-field dependent electroreflectance and photocurrent spectroscopy in InGaAs/InAlAs strained-layer superlattices, 15:48974 (R;US)
Evolution of surface area during the controlled growth of silica spheres, 15:48973 (R;US)
Formation and stability of As-H bonds in H-implanted GaAs, 15:49083 (R;US)
Generic quality assurance/quality control guide for photovoltaic concentrator design, development and system installation, 15:48460 (R;US)
Implementation of a QML (Qualified Manufacturer's List) methodology for discrete semiconductors, 15:48977 (R;US)
Improved tracking for bilateral teleoperators with time delay, 15:49166 (R;US)
Intense ion beam transport in neutral gas, 15:50202 (R;US)
Light-heavy-hole-mixing-induced selection rules for magnetoluminescence and valence-band energy dispersion in semiconductor quantum wells, 15:49892 (R;US)
Nonparabolic conduction bands and masses in strained-single-quantum wells, 15:48975 (R;US)
Optical characterization of CdZnTe/CdTe strained quantum wells, 15:48978 (R;US)
Photoluminescence studies of $In_xGa_{1-x}As/Al_yGa_{1-y}As$ strained-layer structures: Effects of annealing, 15:48976 (R;US)
Preliminary model of repository chemistry for the Waste Isolation Pilot Plant, 15:48288 (R;US)
Recent field trials of directional boring equipment for emplacing a borehole grid around and beneath a simulated waste site, 15:49742 (R;US)
Reference concepts for a space-based hydrogen-oxygen combustion, turboalternator, burst power system, 15:49406 (R;US)
Short and long loop manufacturing feedback using a multi-sensor assembly test chip, 15:49191 (R;US)

SICADS: Site Independent Configurable Alarm Display System, 15:50240 (R;US)
Solderability of environmentally exposed Sn-plated surfaces, 15:48897 (R;US)
Stochastic electron beams in the ion-focused regime, 15:49893 (R;US)
Stress accommodation in large-mismatch systems, 15:48979 (R;US)
Terrestrial nickel/hydrogen battery evaluation, 15:48468 (R;US)
Tethered rocket as a vehicle for penetration and impact testing: Development report, 15:49393 (R;US)
Thermal neutron absorption cross sections for igneous rocks: Newberry Caldera, Oregon, 15:48479 (R;US)
Thermal stresses in layered electrical assemblies bonded with solder, 15:49218 (R;US)

Sao Paulo Univ., SP (Brazil). Inst. de Fisica
BRST quantization of spinning relativistic particles with extended supersymmetries, 15:49959 (R;BR)
Double beta decay, neutrino physics, nuclear structure and isospin and spin-isospin symmetries, 15:49926 (R;BR)
Functionals Hartree-Fock equations in the Schrodinger representation of quantum field theory, 15:50094 (R;BR)
Gauge structure, anomalies and mass generation in a three dimensional thirring model, 15:49965 (R;BR)
Luminescence study of spodumene, 15:50071 (R;BR)
Manual for target thickness measurement by alpha particle irradiation, 15:50055 (R;BR;In Portuguese)
Quantum mechanics of relativistic particles in multiply connected spaces and the Aharonov-Bohm effect, 15:50095 (R;BR)
Selection of collective degrees of freedom in the boson space, 15:49964 (R;BR)
Symmetries of Chern-Simons theory in Landau gauge, 15:49958 (R;BR)

Saskatchewan Air and Land Protection Branch, Regina, SK (Canada)
Chemical use and distribution in the Regina aquifer region. Volume I: Executive Summary – Volume II: Report and appendices, 15:49602 (R;CA)

Saskatchewan Dept. of Energy and Mines, Regina, SK (Canada)
Saskatchewan Energy and Mines annual report, 1988-89, 15:48728 (R;CA)

Saskatchewan District, Regina (Canada). Water Resources Branch
Response to recommendation No. 80, Beaufort Sea environmental assessment and review panel: Final report, 1984-89, 15:48171 (R;CA)

Saskatchewan Research Council, Saskatoon, SK (Canada)
Effects of produced sand on short distance pipeline transportation of heavy oil in water emulsions: SRC [Saskatchewan Research Council] pipeloop test results: Final report, 15:48172 (R;CA)

Saskoil-Saskatchewan Oil and Gas Corp., Regina, SK (Canada)
Saskoil annual report 1988, 15:48144 (R;CA)

Science Applications International Corp., Norristown, PA (USA)
Assessment of physical coal-cleaning practices for sulfur removal. Final report, April 1986-January 1990, 15:48073 (R;US)

Science Applications International Corp., San Diego, CA (USA)
Overview and comparison of US commercial nuclear power plants: Nuclear power plant system sourcebook, 15:48539 (R;US)

Second Wind, Inc., Somerville, MA (USA)
Low-cost cogeneration system controller development. Final report, May 1988-July 1989, 15:48823 (R;US)

Siemens AG Unternehmensbereich KWU, Erlangen (Germany, F.R.). Bereich Energieerzeugung
Retention capacity of rock salt. Final report, 15:48289 (R;DE;In German)

Soils Systems, Inc., Marietta, GA (USA)
Ecological characterization atlas of coastal Alabama: Map narrative, 15:49571 (R;US)

Solar Energy Research Inst., Golden, CO (USA)
Assessment of municipal solid waste for energy production in the western United States, 15:48833 (R;US)
Atmospheric performance of the special-purpose Solar Energy Research Institute (SERI) thin-airfoil family: Final results, 15:48484 (R;US)
Conceptual design of an open-cycle ocean thermal energy conversion net power-producing experiment (OC-OTEC NPPE), 15:48471 (R;US)
Evaluation of a high-temperature burner-duct-recuperator system: A technical case study, 15:48806 (R;US)
Performance and cost projections for advanced wind turbines, 15:48483 (R;US)
Research on high-efficiency, large area amorphous silicon based solar cells: Final subcontract report, February 1, 1989–February 28, 1990, 15:48462 (R;US)
Research on high-efficiency, multiple-gap, multi-junction amorphous silicon-based alloy thin-film solar cells: Final subcontract report, March 1, 1987–February 28, 1990, 15:48464 (R;US)
SERI workshop on the role of point defects/defect complexes in silicon device fabrication: Book of abstracts, 15:48461 (R;US)
Structure of amorphous-silicon and germanium alloy films: Annual subcontract report, January 15, 1989–January 14, 1990, 15:48463 (R;US)

Solarex Corp., Newtown, PA (USA). Thin Film Div.
Research on high-efficiency, large area amorphous silicon based solar cells: Final subcontract report, February 1, 1989–February 28, 1990, 15:48462 (R;US)

South African Astronomical Observatory, Cape Town (South Africa)
The South African Astronomical Observatory, 15:49826 (R;ZA)

South Carolina Univ., Columbia, SC (USA). Dept. of Electrical and Computer Engineering
Compact representation of radiation patterns using spherical mode expansions: Final report, 15:49219 (R;US)

Southern Co. Services, Inc., Birmingham, AL (USA)
Innovative Clean Coal Technology (ICCT): 180 MW demonstration of advanced wall-fired combustion techniques for the reduction of nitrogen oxides (NOx) emissions from coal-fired boilers: Quarterly technical progress report, first quarter 1990, 15:48513 (R;US)

Southern Research Inst., Birmingham, AL (USA)
User-friendly data entry routine for the ESP model. Final report, June 1988-September 1989, 15:49545 (R;US)

SRI International, Menlo Park, CA (USA)
Exploratory coprocessing research: Quarterly report No. 7, March 1, 1990–May 31, 1990, 15:48077 (R;US)
Improved Fischer-Tropsch Synthesis catalysts for indirect coal liquefaction: Quarterly technical progress report No. 8, 1 July–30 September 1987, 15:48075 (R;US)
Laboratory particle-velocity experiments on rock from a USSR underground nuclear test site. Technical report, 15:49396 (R;US)

Stanford Univ., CA (USA). Dept. of Geology
Organic chemistry of mantle-derived xenoliths: Assessing the possibilities for deep sources of natural gas. Biennial report, November 1987-November 1989, 15:48179 (R;US)

Stone and Webster Engineering Corp., Boston, MA (USA)
Guide for the application and use of valves in power plant systems: Final report, 15:48602 (R;US)

Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires
Experimental study of the single electron response of the DELPHI Barrel RICH MWPC's, 15:49287 (R;FR)
The main aspects of the Vivitron mechanical structure, 15:49242 (R;FR)

Stuttgart Univ. (Germany, F.R.). Inst. fuer Kernenergetik und Energiesysteme
Investigations of defined oxides for improving the determination of emissivity of high temperatures. Pt. 1 and 2. Pt. 1: Determination of emissivity and optical constants. - Pt. 2: Preparation and analysis of probes, 15:48874 (R;DE;In German)

Suomen Akatemja, Helsinki (Finland)
Particle emissions, 15:49549 (R;FI)

Sussex Univ., Brighton (UK)
Baryogenesis in extended inflation. Part 1: Baryogenesis via production and decay of supermassive bosons, 15:49818 (R;GB)
Classical theory of radiating strings, 15:49823 (R;GB)

Syracuse Univ., NY (USA)
Research program in elementary particle theory: Task A: Progress report ending December 31, 1990, 15:49899 (R;US)

T

Teagasc Agriculture and Food Development Authority, Dublin (Ireland). Rural Economy Research Centre
Impact of renewable derived fuels on energy and agriculture sectors: Final report, 15:48411 (R;LU)

V

Versar, Inc., Springfield, VA (USA)

Amendment to best demonstrated available technology (BDAT) background document for K037. Final report, 15:49511 (R;US)

Amendment to the best demonstrated available technology (BDAT) background document for wastes from the petroleum refining industry K048, K049, K050, K051, K052. Final report, 15:48146 (R;US)

Amendment to the final best demonstrated available technology (BDAT) background document for wastes from the production of 1,1,1-trichloroethane K028, K029, K095, and K096. Final report, 15:49502 (R;US)

Amendment to the final best demonstrated available technology (BDAT) background document for distillation bottom tars from the production of phenol/acetone from cumene K022. Final report, 15:49506 (R;US)

Amendment to the final best demonstrated available technology (BDAT) background document for wastes from the production of chlorinated aliphatic hydrocarbons F024. Final report, 15:49513 (R;US)

Best demonstrated and available technology (BDAT) background document for wastes from the production of epichlorohydrin K017. Final report, 15:49606 (R;US)

Best demonstrated available technology (BDAT) background document. Final, May 1990, 15:49474 (R;US)

Best demonstrated available technology (BDAT) background document for wastes, 15:49498 (R;US)

Best demonstrated available technology (BDAT) background document for wastes from the production of chlorinated aliphatics F025. Volume 1. Final report, 15:49499 (R;US)

Best demonstrated available technology (BDAT) background document for U and P wastes and multisource leachates. Volume D. Reactive U and P waste waters and nonwaste waters. Final report, 15:49501 (R;US)

Best demonstrated available technology (BDAT) background document for U and P wastes and multi-source leachate (F039). Volume A. Wastewater forms of organic U and P wastes and multi-source leachate (F039) for which there are concentration-based treatment standards. Final report, 15:49503 (R;US)

Best demonstrated available technology (BDAT) background document for U and P wastes and multi-source leachate (F039). Volume B. U and P wastewaters and nonwaste waters with methods of treatment as treatment standards. Final report, 15:49504 (R;US)

Best demonstrated available technology (BDAT) background document for U and P wastes and multi-source leachate (F039). Volume C. Nonwastewater forms of organic U and P wastes and multi-source leachate (F039) for which there are concentration-based treatment standards. Final report, 15:49505 (R;US)

Best demonstrated available technology (BDAT) background document for distillation bottoms from the production of aniline K083. Final report, 15:49507 (R;US)

Best demonstrated available technology (BDAT) background document for distillation bottoms from the production of nitrobenzene by the nitration of benzene K025. Final report, 15:49508 (R;US)

Best demonstrated available technology (BDAT) background document for stripping still tails from the production of methyl ethyl pyridines K026. Final report, 15:49509 (R;US)

Best demonstrated available technology (BDAT) background document for waste-water treatment sludges generated in the production of creosote K035. Final report, 15:49510 (R;US)

Best demonstrated available technology (BDAT) background document for halogenated pesticide and chlorobenzene wastes K032-K034, K041, K042, K085, K097, K098, K105, D012-D017. Final report, 15:49512 (R;US)

Best demonstrated available technology (BDAT) background document for U and P wastes and multi-source leachate (F039). Volume E. Gaseous U and P wastes. Final report, 15:49514 (R;US)

Final best demonstrated available technology (BDAT) background document for K031, K084, K101, K102, characteristic arsenic wastes (D004), characteristic selenium wastes (D010), and P and U wastes containing arsenic and selenium listing constituents. Volume 1, 15:49475 (R;US)

Final best demonstrated available technology (BDAT) background document for characteristic ignitable wastes (D001), characteristic corrosive wastes (d002), characteristic reactive wastes (D003), and P and U wastes containing reactive listing constituents. Volume 2, 15:49476 (R;US)

Final best demonstrated available technology (BDAT) background document for K001 (addendum) and U051 (creosote). Volume 3, 15:49477 (R;US)

Final best demonstrated available technology (BDAT) background document addendum for K015. Volume 4, 15:49478 (R;US)

Final best demonstrated available technology (BDAT) background document for K073. Volume 5, 15:49479 (R;US)

Final best demonstrated available technology (BDAT) background document for K021. Volume 6, 15:49480 (R;US)

Final best demonstrated available technology (BDAT) background document for K086 (ink-formulation-equipment cleaning wastes). Volume 7, 15:49481 (R;US)

Final best demonstrated available technology (BDAT) background document for K060. Volume 8, 15:49482 (R;US)

Final best demonstrated available technology (BDAT) background document for K061 (Addendum). Volume 9, 15:49483 (R;US)
Final best demonstrated available technology (BDAT) background document for K046 (Addendum). Volume 10, 15:49484 (R;US)
Final best demonstrated available technology (BDAT) background document for F006 waste waters (Addendum). Volume 13, 15:49487 (R;US)
Final best demonstrated available technology (BDAT) background document addendum for cyanide wastes. Volume 14, 15:49488 (R;US)
Final best demonstrated available technology (BDAT) background document addendum for acrylonitrile wastes (K011, K013, and K014). Volume 15, 15:49489 (R;US)
Final best demonstrated available technology (BDAT) background document addendum for F002 (1,1,2-trichloroethane) and F005 (benzene, 2-ethoxyethanol, and 2-nitropropane). Volume 16, 15:49490 (R;US)
Final best demonstrated available technology (BDAT) background for mercury-containing wastes D009, K106, P065, P092, and U151. Volume 17, 15:49491 (R;US)
Final best demonstrated available technology (BDAT) background document for P and U thallium wastes. Volume 18, 15:49492 (R;US)
Final best demonstrated available technology (BDAT) background document for vanadium-containing wastes (P119 and P120). Volume 19, 15:49493 (R;US)
Final best demonstrated available technology (BDAT) background document for barium wastes (D005 and P013). Volume 20, 15:49494 (R;US)
Final best demonstrated available technology (BDAT) background document for D006 cadmium wastes. Volume 21, 15:49495 (R;US)
Final best demonstrated available technology (BDAT) background document for chromium wastes D007 and U032. Volume 22, 15:49496 (R;US)
Final best demonstrated available technology (BDAT) background document for D008 and P and U lead wastes. Volume 23, 15:49497 (R;US)
Final treatment standards for K069 nonwaste waters in the calcium sulfate/sodium subcategory and waste-water forms of K069. Volume 11. Memorandum report, 15:49485 (R;US)
Final treatment standards for nonwaste-water and waste-water forms of K100. Volume 12. Memorandum report, 15:49486 (R;US)
Treatment standards for nonwaste-water and waste-water forms of K044, K045, and K047. Volume 2. Final report, 15:49500 (R;US)
Waste-minimization opportunity assessment, Fort Riley, Kansas. Summary report, April 1989-December 1989, 15:49613 (R;US)

Virginia Center for Coal and Minerals Processing, Blacksburg, VA (USA)
In-plant testing of microbubble column flotation: Technical progress report second quarter, January 1, 1990–March 31, 1990, 15:48072 (R;US)

Virginia Univ., Charlottesville, VA (USA)
Corrosion fatigue crack propagation in metals, 15:48893 (R;US)

Virginia Univ., Charlottesville, VA (USA). Dept. of Materials Science
Investigation of thermo-mechanical effects in silicon carbide whisker/Al alloy composites. Final report, 1 March 1985-31 August 1989, 15:48902 (R;US)

W

Washington Univ., Seattle, WA (USA)
Two and three dimensional magnetotelluric inversion: Annual progress report, 15:49733 (R;US)

Washington Univ., St. Louis, MO (USA). Dept. of Physics
Structure of amorphous-silicon and germanium alloy films: Annual subcontract report, January 15, 1989–January 14, 1990, 15:48463 (R;US)

West Virginia Univ., Morgantown, WV (USA). Dept. of Chemical Engineering
Reaction kinetics of the CaO-SO_2 system in absence of inter-grain pore diffusion: Annual report, 15:48108 (R;US)

West Virginia Univ., Morgantown, WV (USA). Dept. of Mechanical and Aerospace Engineering
Deposition, corrosion, erosion and sulfur emission studies related to coal combustion: Annual report, 15:48109 (R;US)

Western Research Inst., Laramie, WY (USA)
Distribution of a crystalline nickel (II) porphyrin in the Green River Formation, 15:48206 (R;US)
Formation of calcium and magnesium molybdate complexes in dilute aqueous solutions and evaluation of powellite solubility in spent oil shale, 15:48202 (R;US)

Westinghouse Electric Corp., Carlsbad, NM (USA). Waste Isolation Div.
Waste Isolation Pilot Plant site specific plan: Revision 2, 15:48260 (R;US)

Westinghouse Hanford Co., Richland, WA (USA)
Hanford Site radioactive solid waste acceptance criteria, 15:48292 (R;US)
Liquid effluent study project plan: Environmental and waste management: Revision 2, 15:48293 (R;US)
N reactor external events probabilistic risk assessment using NUREG-1150 methods, 15:48669 (R;US)
Simulation of alpha continuous air monitor alarm response in the presence of plutonium, 15:49557 (R;US)

Weston (Roy F.), Inc., West Chester, PA (USA)
Task Order 2 enhanced preliminary assessment, Fort Douglas, Salt Lake City, Utah. Final report, October-December 1989, 15:49416 (R;US)
Task order enhanced preliminary assessment, New Orleans Military Ocean Terminal, New Orleans, Louisiana. Final report, October-December 1989, 15:49417 (R;US)

Wimpey Labs. Ltd., Hayes (UK)
A passive solar heating facility for existing houses: Demonstration project: Final report, 15:48473 (R;LU)

Wisconsin Univ., Madison, WI (USA)
Computation of emissions from exhaust-gas composition measurements, 15:48148 (R;US)
Morphological analysis of ionomers: Progress report, April 1, 1989–March 31, 1990, 15:48954 (R;US)
Variable eigenmode excitation in the beach heating of two-ion-species mirror plasmas, 15:50120 (R;US)

Wisconsin Univ., Madison, WI (USA). Dept. of Horticulture
Mechanism for the selective conjugation of ubiquitin to phytochrome: Progress report for 1989, 15:49643 (R;US)

Wisconsin Univ., Madison, WI (USA). Plasma Physics Research
Confinement and fluctuations in the MST [Madison Symmetric Torus] reversed field pinch, 15:50115 (R;US)

Woods Hole Oceanographic Institution, MA (USA). Coastal Research Center
US Mussel Watch Program: Transuranic element data from Woods Hole Oceanographic Institution 1976-1983. Technical report, 15:49610 (R;US)

Y

Yale Univ., New Haven, CT (USA)
Differential seeding and regeneration in openings and beneath closed canopy in sub-tropical wet forest, 15:49568 (R;US)
Theoretical and numerical studies in magnetic mirror fusion: Progress report, 15:50116 (R;US)

Personal Author Index

Authors' surnames are indexed in the form appearing in the publication cited; given names generally have been reduced to initials. For documents with multiple authors, each author name is indexed. The entry for a primary author (first author listed on an abstracted document) includes the full document title and citation number. Entries for other authors provide a cross-reference to the primary author. Also included is information on the document type, country of publication, and the document language listed in parentheses in the format (J;FR;In French and English). Accent marks are not input because of computer alphabetization. Spelling and transliteration follow standard conventions.

Subject Index

This index is arranged by subject descriptors selected from those assigned to each citation in this publication. Subject descriptors are selected from a controlled thesaurus of terms, *International Energy: Subject Thesaurus* (ETDE/PUB-2). In order to enhance indexing, subject descriptor entries generally consist of a pair of descriptors: a main term and a qualifier term. Each entry includes the full title (which may be followed by supplementary descriptive information in parentheses) and the citation number. Additional information given in parentheses indicates the document type (an abbreviation such as B for book), the country of publication (such as DE for Federal Republic of Germany), and the language if non-English.

See references guide users from synonymous terms to the descriptors selected for the concept. *See also* references indicate subject concepts that are more specific than a particular descriptor. To gain complete subject coverage, all such terms should be reviewed.

An ionic system with critical point at 44°C, 15:49042 (RA;US)
Work in progress, 15:49142 (RA;US)
ANALOG-TO-DIGITAL CONVERTERS
Information plates TP, δT and T2A for the KLYuKVA data collection system, 15:49207 (R;SU;In Russian)
ANALYSIS (GAS)
See GAS ANALYSIS
ANGARA-5 DEVICE
Technique for calculation of electrostatic fields of high-current accelerator elements, 15:50174 (R;SU;In Russian)
ANGIOGRAPHY
See BIOMEDICAL RADIOGRAPHY
ANGRA-1 REACTOR
Simplified model of a PWR primary circuit, 15:48561 (R;BR;In Portuguese)
ANHARMONIC OSCILLATORS
Two new types of solvability of the one-dimensional anharmonic oscillators, 15:49971 (R;SU)
ANILINE
Best demonstrated available technology (BDAT) background document for distillation bottoms from the production of aniline K083. Final report, 15:49507 (R;US)
ANIMAL BREEDING
Partial room brooding for poultry, 15:48788 (R;CA)
ANIMAL SHELTERS
Growth room temperature control with water-source heat pumps, 15:48787 (R;CA)
Heat exchangers reduce costs, provide better livestock environment, 15:48815 (R;CA)
ANIMALS
Ecological characterization atlas of coastal Alabama: Map narrative, 15:49571 (R;US)
Texas Barrier Islands Region ecological characterization atlas: Biological resources narrative, 15:49570 (R;US)
ANL
Isotope geochemistry: A critical component of energy research, 15:49739 (R;US)
Nuclear Technology Programs semiannual progress report, October 1987–March 1988, 15:48729 (R;US)
ANNEALING
Refining of crystal structures of macromolecules with molecular dynamics, 15:49863 (RA;BR;In Portuguese)
ANODES
Corrosion and arc erosion in MHD channels: Quarterly progress report, January–March 1990, 15:48757 (R;US)
The corrosion of carbon black anodes in alkaline electrolyte: IV. Current efficiencies for oxygen evolution from metal oxide-impregnated graphitized furnace blacks, 15:49104 (RA;US)
ANSTO
Environmental survey at Lucas Heights Research Laboratories, 1987, 15:48372 (R;AU)
ANTARCTIC OCEAN
See SEAS
ANTENNAS
Compact representation of radiation patterns using spherical mode expansions: Final report, 15:49219 (R;US)
ANTHRACENE
Enhanced photooxidation of anthracene on SiO_2, 15:49144 (BA;US)
ANTIFERROMAGNETIC MATERIALS
Magnetic properties of Hubbard-sigma model with three-dimensionality, 15:48917 (R;JP)
ANTILAMBDA PARTICLES
Analysis of the reaction p-barp→Λ-barΛ near the threshold, 15:49940 (R;SU)
ANTIMONY OXIDES
Superconducting and structural properties of the $(Ba_{0.6}K_{0.4})(Bi_{1-y}Sb_y)O_3$ system, 15:48910 (R;US)
ANTINEUTRINO-NEUTRON INTERACTIONS
Determination of value of the $\sigma(\nu\text{-barn}\rightarrow\mu^{\pm}X)\sigma(\nu\text{-barp}\rightarrow\mu^{\pm}X)$ cross section ratio at neutrino energies up to 30 GeV, 15:49928 (R;SU;In Russian)
ANTINEUTRINO-PROTON INTERACTIONS
Determination of value of the $\sigma(\nu\text{-barn}\rightarrow\mu^{\pm}X)\sigma(\nu\text{-barp}\rightarrow\mu^{\pm}X)$ cross section ratio at neutrino energies up to 30 GeV, 15:49928 (R;SU;In Russian)
ANTIPROTONS
Circulation ring and mass screening of unstable nucleus, 15:49280 (RA;JP;In Japanese)
APERTURES
Design of thick apertures for high-resolution neutron penumbral imaging, 15:49327 (J;US)
APPARATUS
See EQUIPMENT
AQUATIC ECOSYSTEMS
Species profiles: Life histories and environmental requirements of coastal fishes and invertebrates (South Atlantic): Striped bass, 15:49588 (R;US)
AQUATIC ORGANISMS
See also FISHES
Texas Barrier Islands Region ecological characterization atlas: Biological resources narrative, 15:49570 (R;US)
AQUEOUS SOLUTIONS
The chemistry of plutonium(VI) in aqueous carbonate solutions, 15:49033 (R;US)
AQUIFERS
Chemical use and distribution in the Regina aquifer region. Volume I: Executive Summary – Volume II: Report and appendices, 15:49602 (R;CA)
Results from a workshop on research needs for modeling aquifer thermal energy storage systems, 15:48690 (R;US)
ARAMIDS
Thin-film composite materials, Phase 2. Final report, 1 April-31 December 1986, 15:48948 (R;US)
ARC FURNACES
Recycling of electric-arc-furnace dust, 15:48824 (R;US)
ARCHITECTURE
Integration of simulation into building design: The need for a joint approach, 15:48783 (R;US)
ARCTIC REGIONS
Revegetation in the Canadian north. A 15 year perspective: Summary of findings, 15:48163 (RA;CA)
ARGON
Angle-resolved photoemission from the Ar 2p subshell, 15:49132 (RA;US)
Tunable far-infrared laser spectroscopy of van der Waals bonds: Vibration-rotation-tunneling spectra of Ar-H_2O, 15:49139 (RA;US)
ARGON 31
Search for β -^{2} He, β - p α and β - ^{3}p in the proton-rich nucleus ^{31}Ar, 15:50003 (R;FR)
ARGON 40 BEAMS
Isotopical separation of relativistic projectile fragments, first experiments at SATURNE, 15:50006 (RA;FR)
ARGON 40 REACTIONS
Central collisions at the fermi energy, 15:50012 (R;FR)
Charged pion production in nucleus-nucleus collisions at E/A between 400 and 800 mev, 15:50007 (R;FR;In French)
Study of the linear momentum transfer distribution in the ^{40} Ar + ^{12}C system at 27, 32, 36, 40, 44 and 60 MeV/A, 15:49998 (R;FR;In French)
ARGON CHLORIDES
Far-infrared laser Stark spectroscopy of the Σ bending vibration of ArHCl, 15:48999 (RA;US)

Tunable far-infrared laser spectroscopy of van der Waals bonds: Extended measurements on the lowest Σ bend of ArHCl, 15:49000 (RA;US)
Tunable far-infrared laser spectroscopy of van der Waals bonds: Extended measurements on the lowest Σ bend of ArHCl, 15:49136 (RA;US)

ARGON COMPOUNDS
See also ARGON CHLORIDES
ARGON HYDRIDES
ARGON IODIDES
Resonance ionization spectroscopy of molecular clusters using picosecond lasers, 15:48992 (R;US)
Tunable far-infrared laser spectroscopy of van der Waals bonds: Vibrational-rotation-tunneling spectra of Ar-H_2O, 15:49047 (RA;US)

ARGON HYDRIDES
Far-infrared laser Stark spectroscopy of the Σ bending vibration of ArHCl, 15:48999 (RA;US)
Tunable far-infrared laser spectroscopy of van der Waals bonds: Extended measurements on the lowest Σ bend of ArHCl, 15:49136 (RA;US)
Tunable far-infrared laser spectroscopy of van der Waals bonds: Extended measurements on the lowest Σ bend of ArHCl, 15:49000 (RA;US)

ARGON IODIDES
Resonance ionization spectroscopy of molecular clusters using picosecond lasers, 15:48992 (R;US)

ARGON IONS
Double and single electron capture in slow collisions of $Ar^{9,8+}$ ions with He atoms, 15:49889 (RA;US)

ARGONNE NATIONAL LABORATORY
See ANL

ARMOR
Dynamic properties of porous B_4C. Interim report, 15:49389 (R;US)

ARMS CONTROL
Intelligence support to arms control. Study project, 15:48850 (R;US)
Risk of disclosure of sensitive information during warhead dismantlement, 15:48851 (R;US)

ARRAY PROCESSORS
SISAL versus FORTRAN: A comparison using the Livermore Loops: Revision 2, 15:50242 (R;US)
The scalable coherent interface, IEEE P1596: Status and possible applications to data acquisition and physics, 15:49334 (J;US)

ARSENIC
Final best demonstrated available technology (BDAT) background document for K031, K084, K101, K102, characteristic arsenic wastes (D004), characteristic selenium wastes (D010), and P and U wastes containing arsenic and selenium listing constituents. Volume 1, 15:49475 (R;US)
Final response to BDAT related comments document. D004: Characteristic wastes for arsenic and K, P, and U wastes containing arsenic and D010: Characteristic wastes for selenium. Volume 1-E, 15:49520 (R;US)
Formation and stability of As-H bonds in H-implanted GaAs, 15:49083 (R;US)

ASBESTOS
Integrated criteria document: Asbestos effects, 15:49537 (R;NL)
Integrated criteria document: Asbestos effects. Appendix, 15:49722 (R;NL)
Task Order 2 enhanced preliminary assessment, Fort Douglas, Salt Lake City, Utah. Final report, October-December 1989, 15:49416 (R;US)
Task order enhanced preliminary assessment, New Orleans Military Ocean Terminal, New Orleans, Louisiana. Final report, October-December 1989, 15:49417 (R;US)

ASHES
See also FLY ASH
Reuse of incinerated soil residues in land reclamation, 15:49567 (R;US)

ASPHALTENES
A study of asphaltene flocculation in heavy oil and asphalt solutions: Final report, 15:48174 (R;CA)
Study of asphaltene flocculation in heavy oil and asphalt solutions, 15:48173 (R;CA)

ASPHALTS
See also ASPHALTENES
Catalytic hydrotreatment of refinery waste: Demonstration project: Final report, 15:48145 (R;LU)
Study of asphaltene flocculation in heavy oil and asphalt solutions, 15:48173 (R;CA)

ASSE SALT MINE
Hydrogeological investigations at the Asse salt mine, 15:48282 (RA;DE;In German)

ASTATINE 211
Introduction of astatine into monoclonal antibodies, 15:49150 (R;SU;In Russian)

ASTATINE COMPOUNDS
Introduction of astatine into monoclonal antibodies, 15:49150 (R;SU;In Russian)

ASTRONAUTS
Improved model for solar cosmic ray exposure in manned Earth orbital flights, 15:49716 (R;US)

ASTRONOMY
The 1973 x-ray outburst of 4U1145-61, 15:49842 (BA;US)
The South African Astronomical Observatory, 15:49826 (R;ZA)

ASTROPHYSICS
Stellar astrophysics, 15:49827 (RA;ZA)
The South African Astronomical Observatory, 15:49826 (R;ZA)

ATF TORSATRON
Edge turbulence and transport: Text and ATF modeling, 15:50112 (R;US)
Fluctuations and stability in the Advanced Toroidal Facility (ATF) torsatron, 15:50132 (R;US)

ATHABASCA DEPOSIT
Experiences with in situ monitoring instrumentation at AOSTRA's [Alberta Oil Sands Technology and Research Authority] underground test facility, 15:48197 (RA;CA)

ATMOSPHERIC CHEMISTRY
Problems in aircraft measurement of trace atmospheric species, 15:49559 (BA;US)

ATMOSPHERIC CIRCULATION
Use of excess carbon-14 data to test 2D stratospheric models, 15:49462 (RA;US)

ATMOSPHERIC EXPOSURE CHAMBERS
See EXPOSURE CHAMBERS

ATMOSPHERIC PRECIPITATIONS
Red Canyon wash infiltration studies, 15:49592 (R;US)

ATOM COLLISIONS
See also ATOM-ATOM COLLISIONS
ATOM-MOLECULE COLLISIONS
ELECTRON-ATOM COLLISIONS
ION-ATOM COLLISIONS
High-energy atomic physics, 15:49887 (RA;US)
Monte Carlo path integration for the real-time propagator, 15:50227 (RA;US)
The physics of electronic and atomic collisions, 15:49868 (B;US)
Theory of atomic and molecular collision processes, 15:50226 (RA;US)

ATOM-ATOM COLLISIONS
A diabatic reaction-path Hamiltonian, 15:50229 (RA;US)

ATOM-MOLECULE COLLISIONS
Crossed-molecular-beam studies of the reactions of methyl radicals with iodoalkanes, 15:49884 (RA;US)
Dynamics of endoergic substitution reactions. II. Br + (CH_2CCl_2) → Cl + (CH_2CClBr), 15:49883 (RA;US)
Dynamics of endoergic substitution reactions: I. Br + chlorinated aromatic compounds, 15:49882 (RA;US)
Polarization effects in reactive scattering of Na atoms in the 4D level, 15:49885 (RA;US)

ATOMIC BOMBS
See NUCLEAR WEAPONS

ATOMIC EXPLOSIONS
See NUCLEAR EXPLOSIONS

ATOMIC FLUORESCENCE SPECTROSCOPY

B

B MESONS
See also B NEUTRAL MESONS
μ particle detector, 15:49313 (RA;JP;In Japanese)
B meson physics on Y (4s), 15:49952 (RA;JP)
Comparison of B factories, 15:49953 (RA;JP;In Japanese)
Electromagnetic shower calorimeter, 15:49310 (RA;JP;In Japanese)
Measurement of Bs-Bs-bar mixing, 15:49914 (RA;JP;In Japanese)
Tracking, 15:49312 (RA;JP;In Japanese)
B NEUTRAL MESONS
A study on CP violation, 15:49961 (RA;JP;In Japanese)
CP violating decay of neutral B meson, 15:49960 (RA;JP;In Japanese)
Measurement of V_{ub}, 15:49913 (RA;JP;In Japanese)
Supersymmetric version of horizontal gauge interactions, 15:49931 (R;SU)
BACTERIA
See also SULFUR-OXIDIZING BACTERIA
Development of water purification technologies for intensive fish culture. 3.: Selection of marine denitrifying bacteria by their denitrification pattern, 15:49591 (R;JP;In Japanese)
Isolation and properties of plasmids from Deinococcus radiodurans Sark, 15:49714 (R;JP)
BACTERIOPHAGES
Control of microbiofouling using bacteriophage. 2.: Detection of phages and fundamental study of their lytie effect on fouling bacteria, 15:48487 (R;JP;In Japanese)
BAGHOUSES
Dry FGD [flue-gas desulfurization] at Argonne National Laboratory, 15:48500 (R;US)
BALLISTIC MISSILE DEFENSE
Reference concepts for a space-based hydrogen-oxygen combustion, turboalternator, burst power system, 15:49406 (R;US)
BANKS
See COMMERCIAL BUILDINGS
BARC
Radiochemistry Division: annual progress report: 1987, 15:49147 (R;IN)
BARIUM
Final best demonstrated available technology (BDAT) background document for barium wastes (D005 and P013). Volume 20, 15:49494 (R;US)
Final response to BDAT related comments document: D005: Characteristic wastes for barium, and P013 and D006: Characteristic wastes for cadmium. Volume 1-F, 15:49521 (R;US)
Retention of alkaline earth elements in man: Final report for the period 1 April 1986 - 14 May 1989, 15:49712 (R;XA)
BARIUM COMPOUNDS
See also BARIUM OXIDES
Dielectric properties of fluxed barium titanate ceramics with zirconia additions, 15:48945 (J;US)
BARIUM OXIDES
Development of high-Tc superconducting wire with high critical current density, 15:48935 (R;JP)
Fabrication of composite high temperature superconductor wires from $Ag/YBa_2Cu_3O_x$ power produced by $AgNO_3$ decomposition, 15:48901 (R;US)
In-situ transmission electron microscopy and computer simulation study of the kinetics of oxygen loss in $YBa_2Cu_3O_z$, 15:48932 (R;US)
International workshop on ion beam modification and processing of high-Tc superconductors: Physics and devices: Program and abstracts, 15:48905 (R;GB)
Processing of $YBA_2Cu_3O_7$ tapes from a molten salt precursor, 15:48924 (R;US)
Superconducting and structural properties of the $(Ba_{0.6}K_{0.4})(Bi_{1-y}Sb_y)O_3$ system, 15:48910 (R;US)
The upper critical field of $HoBa_2Cu_3O_{7-\delta}$ for H || c, 15:48918 (R;US)
Thermodynamic critical field of $Y_1Ba_2Cu_3O_7$, 15:48921 (R;US)
$YBa_2Cu_3O_x$ composites with improved toughness and strength, 15:48916 (R;US)
BARYON RESONANCES
See BARYONS
BARYONS

NUCLEONS
Baryogenesis in extended inflation. Part 1: Baryogenesis via production and decay of supermassive bosons, 15:49818 (R;GB)
Cosmological baryon and lepton number in the presence of electroweak fermion-number violation, 15:49820 (R;US)
BATTELLE PACIFIC NORTHWEST LABORATORIES
Isotope geochemistry: A critical component of energy research, 15:49739 (R;US)
BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES
BATTERY CHARGING
A microprocessor based charge control system for the simultaneous charging of several batteries with one charge controller: Final report for 1989, 15:48839 (R;US)
BEAM BENDING MAGNETS
Optimization of the shape of the bending magnets cross section for electron accelerators and storage rings, 15:49246 (R;SU)
BEAM BUNCHING
A very wide bandwidth Faraday cup suitable for measuring gigahertz structure on ion beams with velocities down to $\beta < 0.01$, 15:49241 (R;US)
BEAM EMITTANCE
Increase of strip beam emittance in linear focusing systems, 15:49234 (R;SU;In Russian)
BEAM PERVEANCE
See BEAM EMITTANCE

BEAM STRIPPERS
Study on charge exchange and radiation resistance of carbon targets in the I-2 proton linear accelerator, 15:49257 (R;SU;In Russian)
BEAM TRANSPORT
On the beam impedance of shallow tapered cavities, 15:49236 (R;US)
BEAM-PLASMA SYSTEMS
Excitation of regular oscillations and acceleration of charged particles by electron beam in a non-uniform plasma resonator, 15:50159 (R;UA;In Russian)
Forced scattering of a non-ordinary electromagnetic wave by an electron beam in a plasma in magnetic field, 15:50157 (R;UA;In Russian)
Stochastic electron beams in the ion-focused regime, 15:49893 (R;US)
BEAN PLANT
See PHASEOLUS
BEAUFORT SEA
Response to recommendation No. 80, Beaufort Sea environmental assessment and review panel: Final report, 1984-89, 15:48171 (R;CA)
BEAUTY PARTICLES
Measurement of the $e^+e^- \rightarrow b\bar{b}$ cross section and forward-backward charge asymmetry at a center-of-mass energy of 57.2 GeV, 15:49905 (R;US)
BELGIAN REACTOR 2
See BR-2 REACTOR
BENZENE
Observation of correlation effects in zero kinetic energy electron spectra near the N1s and C1s thresholds in N_2, CO, C_6H_6, and C_2H_4, 15:49131 (RA;US)
Resonant processes above the carbon 1s ionization threshold in benzene and ethylene, 15:49133 (RA;US)
BERKELEY BEVALAC
See BEVALAC
BERYLLIUM
Beryllium disease: A summary of the occupational health concern, 15:49718 (R;CA)
Microscopic integral cross section measurements in the Be(d,n) neutron spectrum for applications in neutron dosimetry, radiation damage and the production of long-lived radionuclides, 15:49980 (R;US)
BERYLLIUM 13
Neutron-rich isotopes of the lightest elements, 15:49991 (R;SU)
BERYLLIUM 6
Optimization of kinematically complete experiments in four-particle nuclear reactions by simulation method, 15:50027 (R;SU;In Russian)
BERYLLIUM 7
Comparison of theoretical and phenomenological phase shifts for $^3He(\alpha,\alpha)^3He$ scattering at ^7Be excitation range between 25 and 42 MeV, 15:50034 (R;UA)
BERYLLIUM MODERATORS

Phantoms
A phantom for quality control in mammography, 15:49677 (RA;GB)
Patient equivalent phantoms in chest radiography, 15:49674 (RA;GB)

Photographic Films
Speed and speed classes of film-screen systems: Determination and practical application, 15:49683 (RA;GB)

Photosensitivity
Speed and speed classes of film-screen systems: Determination and practical application, 15:49683 (RA;GB)

Quality Assurance
A protocol for the commissioning and routine testing of mammographic X-ray systems, 15:49675 (RA;GB)
A review of automatic exposure control of conventional and digital systems, 15:49672 (RA;GB)
An overview of the International Electrotechnical Commission's activities on quality assurance in diagnostic radiology, 15:49667 (RA;GB)
Film-screen characteristics, 15:49684 (RA;GB)
Mandatory quality assurance programmes for diagnostic radiology facilities in Ontario, Canada: Minimum requirements and limiting values, 15:49664 (RA;GB)
Procuring, maintaining and using equipment: the key issues in controlling exposure to patients, 15:49661 (RA;GB)
Proposed limiting values for performance criteria in acceptance testing of diagnostic X-ray equipment in the Federal Republic of Germany, 15:49662 (RA;GB)
Quality assurance and the World Health Organization initiative of 'Health for All' (Diagnostic radiology.), 15:49666 (RA;GB)
Radiological properties of an automatic exposure control system, 15:49671 (RA;GB)
Reduction of X-ray film processing variations, 15:49685 (RA;GB)
Screening with mammography - what quality is required and how is it checked?, 15:49676 (RA;GB)
The Northern Regional Programme for the acceptance testing of X-ray equipment, 15:49663 (RA;GB)
The relationship between medical diagnostic requirements and limiting values of technical and physical parameters for image production, 15:49658 (RA;GB)

Quality Control
A phantom for quality control in mammography, 15:49677 (RA;GB)
An electronic instrument for high-voltage measurements of an X-ray unit for mammography, 15:49678 (RA;GB)
Methods of measurement, accuracy and tolerable deviations, 15:49665 (RA;GB)
Organizing quality control programmes, 15:49660 (RA;GB)
Physical aspects of establishing tolerances and limiting values in diagnostic radiology, 15:49659 (RA;GB)
Practical aspects of uniformity and intercomparison of quality control tests, 15:49668 (RA;GB)
Quality control of dental X-ray units, 15:49679 (RA;GB)
Sensitometric and densitometric methods for quality control of medical X-ray images, 15:49686 (RA;GB)

Resolution
Methods of measurement, accuracy and tolerable deviations, 15:49665 (RA;GB)

Surface Barrier Detectors
The use of a silicon surface barrier detector for quality assurance in diagnostic radiology, 15:49657 (RA;GB)

United Kingdom
Procuring, maintaining and using equipment: the key issues in controlling exposure to patients, 15:49661 (RA;GB)
The Northern Regional Programme for the acceptance testing of X-ray equipment, 15:49663 (RA;GB)

Who
Quality assurance and the World Health Organization initiative of 'Health for All' (Diagnostic radiology.), 15:49666 (RA;GB)

X-Ray Equipment
An electronic instrument for high-voltage measurements of an X-ray unit for mammography, 15:49678 (RA;GB)
Assessment of a Shimadzu/medical X-ray supplies basic radiographic installation, 15:49694 (R;GB)
Assessment of a Siemens basic radiological installation, 15:49695 (R;GB)
Assessment of the Hitachi Sirius 125 B mobile X-ray Unit at three hospitals, 15:49696 (R;GB)
Field size and centring for conventional X-ray equipment, 15:49670 (RA;GB)
Report on the use of the Palomex Vision One (Alpha-III) mammographic unit for breast cancer screening, 15:49697 (R;GB)
Report on the use of the Senographe 600TS (SENIXHF) mammographic unit for breast cancer screening, 15:49698 (R;GB)

X-Ray Tubes
Determination of high voltage: Methods of measurement, practicality, accuracy and regulations concerning tolerances, 15:49673 (RA;GB)

BIOREACTORS
Anaerobic fluid-bed treatment of coal conversion wastewater: Tenth quarterly technical progress report, November 15, 1988–February 15, 1988, 15:48093 (R;US)

High pressure thermobalance device application to the gasification of char obtained from tropical wood, 15:48433 (RA;LU)
Molecular thermodynamics of aqueous two-phase systems for bioseparations, 15:49158 (RA;US)

BIOTECHNOLOGY
Annual report and summaries of FY 1990 activities, 15:48413 (R;US)
Molecular thermodynamics of aqueous two-phase systems for bioseparations, 15:49158 (RA;US)

BISMUTH GERMANATE DETECTORS
See BGO DETECTORS

BISMUTH OXIDES
Experimental studies of effect of high current pulse electron and carbon ion beams on high temperature Y-Ba-Cu-O, Bi-Ca-Sr-Cu-O superconductors, 15:50078 (R;SU;In Russian)
Microfilamentary $Bi_2Sr_2Ca_1Cu_2O_8$ fibers, 15:48922 (R;US)
Superconducting and structural properties of the $(Ba_{0.6}K_{0.4})(Bi_{1-y}Sb_y)O_3$ system, 15:48910 (R;US)

BLACK HOLES
Thermal Comptonization models for gamma-ray emission from black-hole sources, 15:49846 (BA;US)

BLANKETS (BREEDING)
See BREEDING BLANKETS

BLENDING
See MIXING

BNL
A many particle-tracking detector with drift planes and segmentel cathode readout, 15:49267 (J;US)

BOILERS
Comprehensive report to Congress, Clean Coal Technology Program: Full-scale demonstration of low-NOsub x cell burner retrofit, 15:48501 (R;US)

BOILING WATER COOLED AND MODERATED REACTOR
See BWR TYPE REACTORS

BOREHOLES
Building of a conceptual model at the UE25-c hole complex, 15:48339 (BA;US)

BORIDES
See also YTTRIUM BORIDES
An ionic system with critical point at 44°C, 15:49042 (RA;US)

BORON
Mechanical properties, fracture behavior, and grain-boundary chemistry of B-doped NiAl, 15:48867 (R;US)

BORON 10
Clinical possibilities of neutron capture therapy, 15:49689 (RA;FR)

BORON CARBIDES
Dynamic properties of porous B_4C. Interim report, 15:49389 (R;US)

BORON COMPOUNDS
See also BORIDES
BORON CARBIDES
BORON NITRIDES
Clinical possibilities of neutron capture therapy, 15:49689 (RA;FR)

BORON NITRIDES
Formation and pore structure of boron nitride aerogels, 15:48947 (J;US)
Properties of cubic BN under high pressure and temperature, 15:49079 (RA;US)

BOROSILICATE GLASS
Sintering of spherical glass powder under a uniaxial stress, 15:48984 (J;US)

BOROSILICATES
See BOROSILICATE GLASS

BOSONS
See also GLUONS
MESONS
Baryogenesis in extended inflation. Part 1: Baryogenesis via production and decay of supermassive bosons, 15:49818 (R;GB)
Relativistic massive particle with higher curvatures as a model for description of bosons and fermions, 15:49935 (R;SU)

BOTTOM PARTICLES
See BEAUTY PARTICLES

BOUNDARIES (GRAIN)
See GRAIN BOUNDARIES

BR-2 REACTOR
Radioisotopes production programmes for reactor radioisotopes, 15:48636 (RA;FR)

BRACKISH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS

BREAKWATERS
See DAMS

BREASTS
See MAMMARY GLANDS

BREEDING BLANKETS
Irradiation testing for fusion technology. Current programme and future plans of KfK, 15:50170 (RA;FR)

BREMSSTRAHLUNG (MAGNETIC)
See SYNCHROTRON RADIATION

BRINES
Preliminary model of repository chemistry for the Waste Isolation Pilot Plant, 15:48288 (R;US)
The effects of brine contamination on volume change behavior of fine grained soils, 15:48166 (RA;CA)

BRITISH COLUMBIA
A brief introduction to Revelstoke Project, 15:48444 (RA;CA)
A new Frontier Geoscience Project: Chilcotin-Nechako region, central British Columbia, 15:48128 (RA;CA)
Current research, part F. Frontier Geoscience Program. Cordilleran and offshore basins, British Columbia, 15:49735 (R;CA)
Petroleum source rock characteristics of the Tertiary Skonun Formation, Queen Charlotte Islands, Hecate Strait and Queen Charlotte Sound, British Columbia, 15:48126 (RA;CA)
Stratigraphy, organic maturation, and source rock potential of Cretaceous strata in the Chilcotin-Nechako region (Nazko Basin), British Columbia, 15:48127 (RA;CA)
Stratigraphy, sedimentology and petroleum source rock potential of the Georgia Basin, southwest British Columbia and northwest Washington State, 15:48129 (RA;CA)

BRONCHOGENIC CARCINOMA
See CARCINOMAS

BROOKHAVEN AGS
The BNL 200 MeV H^- linac: Performance and upgrades, 15:49239 (R;US)

BROOKHAVEN NATIONAL LABORATORY
See BNL

BROOKHAVEN RHIC
The new conceptual design of snakes and spin rotators in RHIC, 15:49230 (R;US)

BUILDING (MANUFACTURING)
See FABRICATION

BUILDING MATERIALS
See also CEMENTS
CONCRETES
Irradiation testing for fusion technology. Current programme and future plans of KfK, 15:50170 (RA;FR)
Prospects and future utilization, 15:48621 (R;FR;In EN, DE)

BUILDINGS

LAGUNA VERDE-1 REACTOR
PEACH BOTTOM-2 REACTOR

Atws
Contribution of Anticipated Transients Without Scram (ATWS) to core melt at United States nuclear power plants, 15:48647 (R;US)

Bibliographies
Overview and comparison of US commercial nuclear power plants: Nuclear power plant system sourcebook, 15:48539 (R;US)

Computerized Simulation
The GRS thermalhydraulic system code ATHLET, 15:48533 (RA;XA)

Containment Buildings
An analysis of containment venting as a severe accident mitigation strategy for the BWR Mark II containment, 15:48670 (J;US)

Corium
The MELTSPREAD-1 computer code for the analysis of transient spreading in containments, 15:48643 (R;US)

Eccs
An intermediate break BWR LOCA test (RUN 991) at ROSA-III: Simulation of ECCS line break LOCA phenomena, 15:48656 (R;JP)

Fuel Rods
Irradiation testing of SIEMENS/KWU LWR fuel in the HFR Petten, 15:48531 (RA;FR)

Gamma Dosimetry
[Reactor dosimetry]: Foreign trip report, August 24, 1990–September 4, 1990, 15:48668 (R;US)

Intergranular Corrosion
BWR [Boiling Water Reactor] Owners Group Intergranular Stress Corrosion Cracking Research Program: Executive summary: Phase 2 (1984–1988): Final report, 15:48528 (R;US)

Meltdown
The MELTSPREAD-1 computer code for the analysis of transient spreading in containments, 15:48643 (R;US)

Neutron Dosimetry
[Reactor dosimetry]: Foreign trip report, August 24, 1990–September 4, 1990, 15:48668 (R;US)

Pressure Vessels
Proceedings of the third International Atomic Energy Agency specialist's meeting on subcritical crack growth: Opening session and Technical session 1, 15:48537 (R;US)
Proceedings of the third International Atomic Energy Agency specialists' meeting on subcritical crack growth: Technical sessions 2, 3, and 4 and Recommendations and conclusions Session 5, 15:48538 (R;US)

Reactor Components
Overview and comparison of US commercial nuclear power plants: Nuclear power plant system sourcebook, 15:48539 (R;US)

Reactor Cooling Systems
Proceedings of the third International Atomic Energy Agency specialist's meeting on subcritical crack growth: Opening session and Technical session 1, 15:48537 (R;US)

Reactor Kinetics
Calculation of BWR [Boiling Water Reactor] limit cycle amplitude using Galerkin's method, 15:48527 (R;US)

Reactor Operation
Licensee Event Report (LER) compilation for month of August 1990: Volume 9, No. 8, 15:48592 (R;US)

Reactor Oscillators
Calculation of BWR [Boiling Water Reactor] limit cycle amplitude using Galerkin's method, 15:48527 (R;US)

Reactor Safety
Inherently safe characteristics of nuclear reactors, 15:48532 (R;FR)

Spent Fuels
Burnup credit feasibility for BWR spent fuel shipments, 15:48526 (R;US)

Stress Corrosion
BWR [Boiling Water Reactor] Owners Group Intergranular Stress Corrosion Cracking Research Program: Executive summary: Phase 2 (1984–1988): Final report, 15:48528 (R;US)

Welded Joints
Fabrication of axial stress corrosion cracks in Alloy 182 weld materials: Final report, 15:48529 (R;US)

C

C-1430 RESONANCES
See MESONS

CADMIUM
Final best demonstrated available technology (BDAT) background document for D006 cadmium wastes. Volume 21, 15:49495 (R;US)
Final response to BDAT related comments document: D005: Characteristic wastes for barium, and P013 and D006: Characteristic wastes for cadmium. Volume 1-F, 15:49521 (R;US)

CADMIUM ALLOYS
Physical metallurgy and magnetic behavior of Cd stabilized bcc (beta)Gd alloys, 15:48881 (R;US)

CADMIUM SULFIDES
Picosecond studies of the electron-hole pair dynamics in CdS_xSe_{1-x} graded semiconductors, 15:48961 (RA;US)

CADMIUM TELLURIDES
Optical characterization of CdZnTe/CdTe strained quantum wells, 15:48978 (R;US)

CAES
See COMPRESSED AIR ENERGY STORAGE

CALCIUM
Retention of alkaline earth elements in man: Final report for the period 1 April 1986 - 14 May 1989, 15:49712 (R;XA)

CALCIUM 40 TARGET
Complex fragment emission in binary and multifragment decay of very hot nuclear systems, 15:50001 (R;US)

CALCIUM COMPOUNDS
See also CALCIUM OXIDES
CALCIUM SULFATES
CALCIUM SULFIDES
Formation of calcium and magnesium molybdate complexes in dilute aqueous solutions and evaluation of powellite solubility in spent oil shale, 15:48202 (R;US)

CALCIUM FLUORIDES
See also FLUORITE
Stress versus temperature dependent activation energies in creep, 15:48852 (R;US)

CALCIUM OXIDES
Development of high-Tc superconducting wire with high critical current density, 15:48935 (R;JP)
Microfilamentary $Bi_2Sr_2Ca_1Cu_2O_8$ fibers, 15:48922 (R;US)
Preparation and structural characterization of Tl-Sr-Ca-Cu-O superconducting materials, 15:48934 (R;JP)
Reaction kinetics of the $CaO-SO_2$ system in absence of intergrain pore diffusion: Annual report, 15:48108 (R;US)

CALCIUM SULFATES
See also GYPSUM
Effect of calcium sulfate on pool boiling of enhanced heat transfer surfaces, 15:49180 (R;US)
Final treatment standards for K069 nonwaste waters in the calcium sulfate/sodium subcategory and waste-water forms of K069. Volume 11. Memorandum report, 15:49485 (R;US)

CALCIUM SULFIDES
A study of the thermoelectric properties of Ca, Sr and Hg substituted lanthanum sulfides, 15:48956 (R;US)

CALCULATIONS (COMPUTER)
See COMPUTER CALCULATIONS

CALIBRATION STANDARDS
Simulation of alpha continuous air monitor alarm response in the presence of plutonium, 15:49557 (R;US)
The preparation of synthetic fusion standards for use in the x-ray-fluorescence analysis of rocks and minerals, 15:49024 (R;ZA)

CALIFORNIA
Health assessment for GBF, Inc., Dump, Antioch, Contra Costa County, California, Region 9. CERCLIS No. CAD980498562. Preliminary report, 15:49620 (R;US)
Health assessment for Intersil, Inc./Siemens Components, Cupertino, Santa Clara County, California, Region 9. CERCLIS No. CAD041472341. Preliminary report, 15:49627 (R;US)

CALORIMETERS (PARTICLE)

CHELATING AGENTS
See also EDTA
Complexation of lanthanide(III) ions by catechol and similar ligands, 15:49059 (RA;US)
Kinetically inert lanthanide amine complexes, 15:49005 (RA;US)
CHEMICAL ANALYSIS
Spectrographic determination of impurities in high-purity tantalum oxide and niobium oxide, 15:49081 (R;ZA)
CHEMICAL BONDS
Formation and stability of As-H bonds in H-implanted GaAs, 15:49083 (R;US)
Tunable far-infrared laser spectroscopy of hydrogen bonds: The $K_a = O(u) \rightarrow 1$ (g) rotation-tunneling spectrum of the HCl dimer, 15:49048 (RA;US)
CHEMICAL ENGINEERING
Work in progress, 15:49072 (RA;US)
CHEMICAL INDUSTRY
Best demonstrated available technology (BDAT) background document for U and P wastes and multi-source leachate (F039). Volume E. Gaseous U and P wastes. Final report, 15:49514 (R;US)
CHEMICAL REACTIONS
See also DENITRIFICATION
DESULFURIZATION
SULFIDATION
Quantum mechanical and semiclassical studies of tunneling in hydrogen atom transfer reactions and processes involving hydrogen on metal surfaces, 15:49086 (BA;US)
CHEMICAL REACTORS
Consolidated fuel reprocessing program simulation of a continuous rotary dissolver, 15:48226 (BA;US)
Selective steam cracking for energy and raw materials savings: Final report, 15:48137 (R;LU)
Simultaneous particulates NO_x, SO_x removal from flue gas by all solid-state electrochemical technology: Technical progress report No. 2, October 1, 1987–December 31, 1987, 15:48504 (R;US)
Simultaneous particulates, NO_x, SO_x removal from flue gas by all solid-state electrochemical technology: Technical progress report No. 5, July 1, 1988–September 30, 1988, 15:48507 (R;US)
Simultaneous particulates, NO_x, SO_x removal from flue gas by all solid-state electrochemical technology: Technical progress report No. 6, October 1, 1988–December 31, 1988, 15:48508 (R;US)
Simultaneous particulates, NO_x, SO_x removal from flue gas by all solid-state electrochemcial technology: Technical progress report No. 7, January 1, 1989–March 31, 1989, 15:48509 (R;US)
CHEMICAL SPILLS
Calculating toxic corridors. Revision. Technical report, 15:49415 (R;US)
Emergency response notification system, 15:48158 (R;US)
CHEMICAL WARFARE AGENTS
Analysis of soil samples for chemical warfare agents: Canadian contribution to a multinational round-robin analytical exercise. Memorandum report, 15:49409 (R;US)
Application of high-frequency ventilation to treatment of chemical-warfare casualties: Animal and theoretical studies (application of high-frequency transtracheal jet ventilation to treatment of chemical-warfare casualties). Final report, March 1983-December 1986, 15:49410 (R;US)
Application of high-frequency ventilation to treatment of chemical-warfare casualties: Animal and theoretical studies. Annual report, 1 March 1984-28 February 1985, 15:49411 (R;US)
Chemical weapons proliferation in the Middle East: What is the proper response. Study project, 15:48849 (R;US)
Laser-induced IR fluorescence spectra of simulant chemical threat agent and exhaust vapors. Technical report, 15:49408 (R;US)

CHLORINE

CHLORINATED ALIPHATIC HYDROCARBONS
See also CARBON TETRACHLORIDE
CHLOROFORM
PVC
Amendment to the final best demonstrated available technology (BDAT) background document for wastes from the production of chlorinated aliphatic hydrocarbons F024. Final report, 15:49513 (R;US)
Amendment to the final best demonstrated available technology (BDAT) background document for wastes from the production of 1,1,1-trichloroethane K028, K029, K095, and K096. Final report, 15:49502 (R;US)
Best demonstrated available technology (BDAT) background document for wastes from the production of chlorinated aliphatics F025. Volume 1. Final report, 15:49499 (R;US)
Final response to BDAT related comments document. F025, K002-K008, K011, K013-15, K046, K061, K069. volume 1-k, 15:49526 (R;US)
Final response to BDAT related comments document. K017/K028-K029, K095-096, K022, K025, K035, K026, K083, K024. Volume 1-M, 15:49527 (R;US)
Gas-phase chemical reactivity of CFC-114 [Chloro-fluoro-carbons-114] and potential replacements: Part 1, CFC-114 reactivity with Fsub 2 and UFsub 6, 15:48216 (R;US)
Health assessment for Recticon/Allied Steel Corporation, Parkerford, Chester County, Pennsylvania, Region 3. CERCLIS No. PAD053302865. Preliminary report, 15:49533 (R;US)

CHLORINATED AROMATIC HYDROCARBONS
Best demonstrated available technology (BDAT) background document for halogenated pesticide and chlorobenzene wastes K032-K034, K041, K042, K085, K097, K098, K105, D012-D017. Final report, 15:49512 (R;US)
Dynamics of endoergic substitution reactions: I. Br + chlorinated aromatic compounds, 15:49882 (RA;US)
Report of the PCB Working Group, 15:49576 (R;CA)
Superfund Record of Decision (EPA Region 2): Roebling Steel, NJ. (First remedial action), March 1990, 15:49631 (R;US)
Task order enhanced preliminary assessment, New Orleans Military Ocean Terminal, New Orleans, Louisiana. Final report, October-December 1989, 15:49417 (R;US)

CHLORINE
Determination of non-metallic elements in actinide complexes by oxygen flask combustion (OFC): chlorine and fluorine, 15:48989 (R;IN)
Direct measurement of the absolute kinetics of chlorine atom in CCl_4, 15:49093 (BA;US)

CHLORINE CHLORIDES
See CHLORINE

CHLORINE COMPOUNDS
Evaluation of room-temperature chloroaluminate molten salts as electrolytes for high energy density batteries. Final report, June 1988-April 1990, 15:48691 (R;US)

CHLORINE LOGS
See NEUTRON-GAMMA LOGGING

CHLOROBUTADIENE

COAL
Cleaning
Open-gradient magnetic separation for physical coal cleaning: Results for Pittsburgh No. 8 and Upper Freeport coals, 15:48071 (R;US)

Cocombustion
Co-firing of natural gas and coal. Annual report, October 1988-September 1989, 15:48121 (R;US)
Testing of New Brunswick oil shale in R.P.C. test facility. Open File Report No. 90-2, 15:48199 (R;CA)

Combustion
Artificial intelligence in process control, 15:48110 (RA;US)
Atmospheric fates of air pollutants, 15:49551 (RA;FI)

Combustion Kinetics
Co-firing of natural gas and coal. Annual report, October 1988-September 1989, 15:48121 (R;US)

Combustion Products
Deposition, corrosion, erosion and sulfur emission studies related to coal combustion: Annual report, 15:48109 (R;US)

Coprocessing
Exploratory coprocessing research: Quarterly report No. 7, March 1, 1990–May 31, 1990, 15:48077 (R;US)
Stable carbon isotope analysis of coprocessing materials: Quarterly technical progress report, July 1–September 30, 1989, 15:48076 (R;US)

Desulfurization
Assessment of physical coal-cleaning practices for sulfur removal. Final report, April 1986-January 1990, 15:48073 (R;US)
Bioprocessing of coal. 1.: Microorganisms for coal processing, 15:48074 (R;JP;In Japanese)

Evaluation
Iowa State Mining and Mineral Resources Research Institute: Semi-annual report, July 1, 1989–December 31, 1989, 15:49738 (R;US)

Flotation
In-plant testing of microbubble column flotation: Technical progress report second quarter, January 1, 1990–March 31, 1990, 15:48072 (R;US)

Liquefaction
Bioprocessing of coal. 1.: Microorganisms for coal processing, 15:48074 (R;JP;In Japanese)

Materials Handling
Coal handleability: Addressing the concerns of the electric utility industry, 15:48104 (R;US)

Methanogenic Bacteria
Bioprocessing of coal. 1.: Microorganisms for coal processing, 15:48074 (R;JP;In Japanese)

Phase Studies
Microcharacterization of coal components for beneficiation: Fossil energy quarterly report, April 1, 1989–June 30, 1989, 15:48087 (R;US)

Slurries
Bioprocessing of coal. 1.: Microorganisms for coal processing, 15:48074 (R;JP;In Japanese)

Structural Chemical Analysis
^{31}P NMR analysis of coal moieties bearing -OH, -NH and -SH functions: Quarterly report, April 1, 1990–June 30, 1990, 15:48086 (R;US)

Sulfur
Bioprocessing of coal. 1.: Microorganisms for coal processing, 15:48074 (R;JP;In Japanese)

Sulfur-Oxidizing Bacteria
Bioprocessing of coal. 1.: Microorganisms for coal processing, 15:48074 (R;JP;In Japanese)

Surface Properties
Chemical characterization of the surface sites of coal: Technical progress report, April–June 1990, 15:48085 (R;US)
Chemical characterization of the surface sites of coal: Technical progress report, April–June 1989, 15:48084 (R;US)
Flotation and flocculation chemistry of coal and oxidized coals: Technical progress report, March 15, 1990–June 14, 1990, 15:48083 (R;US)
Measurement and control of coal hydrophobicity, 15:48088 (R;US)

COAL DEPOSITS
Geotechnical study of rock-mass classification parameters for Sydney coal field, Nova Scotia, 15:48100 (R;CA)

COAL GASIFICATION
Anaerobic fluid-bed treatment of coal conversion wastewater: Tenth quarterly technical progress report, November 15, 1988–February 15, 1988, 15:48093 (R;US)
Catalysis of carbon gasification: Influence of different modes of addition of catalysts. Annual report, January 1989-January 1990, 15:48081 (R;US)

COAL GASIFICATION PLANTS
Advanced wastewater treatment, 15:48092 (RA;US)

COAL LIQUEFACTION
Anaerobic fluid-bed treatment of coal conversion wastewater: Tenth quarterly technical progress report, November 15, 1988–February 15, 1988, 15:48093 (R;US)
Methods for producing liquid hydrocarbons from coal, 15:48080 (R;CA)

COAL LIQUEFACTION PLANTS
Advanced wastewater treatment, 15:48092 (RA;US)

COAL MINING
Alluvial valley floor identification and study guidelines. Final report, 15:48103 (R;US)
Plains hydrology and reclamation project: Spoil ground-water chemistry and its impacts on surface water, 15:48098 (R;CA)

COAL PREPARATION
Assessment of physical coal-cleaning practices for sulfur removal. Final report, April 1986-January 1990, 15:48073 (R;US)
High pressure NMR spectroscopy studies: The regioselective hydrogenation mechanism of polynuclear heteroaromatic nitrogen compounds with $Cp^*Rh(CH_3CN)_3^{2+}$ as a catalyst precursor, 15:48082 (BA;US)

COAL PREPARATION PLANTS
Experimental studies of the production of lightweight aggregate from fly ash/coal cleaning refuse mixtures, 15:48094 (R;US)
In-plant testing of microbubble column flotation: Technical progress report second quarter, January 1, 1990–March 31, 1990, 15:48072 (R;US)

COAL-OIL MIXTURES

Commercial sector gas cooling technology frontier and market share analysis, 15:48771 (R;US)

COOLING TOWERS
International cooling-tower and spray pond symposium: Proceedings, 15:48601 (R;US)

COPPER
Adsorption and surface reactions of H_2S and SO_2 on Cu(100) studied by electron-energy-loss spectroscopy, 15:49134 (RA;US)
Analysis of deformation characteristics of a heavily deformed Cu- 20%Nb composite, 15:48880 (R;US)
Application of ion beam sputtering for diffusion study in solids, 15:50065 (R;GB)
Calculation of energy release depth distributions for electrons with 5-100 MeV energy in thick targets, 15:50057 (RA;SU;In Russian)
Catalysis of carbon gasification: Influence of different modes of addition of catalysts. Annual report, January 1989-January 1990, 15:48081 (R;US)
Implementation and assessment of the mechanical-threshold-stress model using the EPIC2 and PINON computer codes, 15:48886 (R;US)
Laser Raman spectroscopy "for in-situ" analysis of corrosion films on metals, 15:48866 (R;US)
Stress versus temperature dependent activation energies in creep, 15:48852 (R;US)
Wear-metal analysis in engine oil by microwave digestion and atomic absorption spectroscopy. Final report, August 1987-January 1988, 15:48988 (R;US)
Work in progress, 15:49038 (RA;US)
Work in progress, 15:49100 (RA;US)

COPPER 64 TARGET
Investigation of anomalous pion production in the reaction Cu(p,π^+)X by 350 MeV protons, 15:50010 (RA;SU)

COPPER ALLOYS
Corrosion and arc erosion in MHD channels: Quarterly progress report, January–March 1990, 15:48757 (R;US)

COPPER OXIDES
Development of high-Tc superconducting wire with high critical current density, 15:48935 (R;JP)
Excess oxygen defects in layered cuprates, 15:48913 (R;US)
Fabrication of composite high temperature superconductor wires from Ag/$YBa_2Cu_3O_x$ power produced by $AgNO_3$ decomposition, 15:48901 (R;US)
Granular and superconducting-glass properties of the high-temperature superconductors, 15:48920 (R;US)
In-situ transmission electron microscopy and computer simulation study of the kinetics of oxygen loss in $YBa_2Cu_3O_z$, 15:48932 (R;US)
International workshop on ion beam modification and processing of high-Tc superconductors: Physics and devices: Program and abstracts, 15:48905 (R;GB)
Magnetic properties of Hubbard-sigma model with three-dimensionality, 15:48917 (R;JP)
Microfilamentary $Bi_2Sr_2Ca_1Cu_2O_8$ fibers, 15:48922 (R;US)
Nonlinear pressure dependence of T_c in single-crystal superconducting BiCaSrCuO, 15:48927 (RA;US)
Preparation and structural characterization of Tl-Sr-Ca-Cu-O superconducting materials, 15:48934 (R;JP)
Processing of $YBA_2Cu_3O_7$ tapes from a molten salt precursor, 15:48924 (R;US)
The upper critical field of $HoBa_2Cu_3O_{7-\delta}$ for H || c, 15:48918 (R;US)
Thermodynamic critical field of $Y_1Ba_2Cu_3O_7$, 15:48921 (R;US)
Work in progress, 15:48928 (RA;US)
$YBa_2Cu_3O_x$ composites with improved toughness and strength, 15:48916 (R;US)

CORES (REACTOR)
See REACTOR CORES

CORIUM
CORQUENCH: A model for gas sparging-enhanced melt-water, film boiling heat transfer, 15:48644 (R;US)
The MELTSPREAD-1 computer code for the analysis of transient spreading in containments, 15:48643 (R;US)

CORN (MAIZE)
See MAIZE

CORN STOVER
See AGRICULTURAL WASTES
MAIZE

CORONA (SOLAR)

CORROSION INHIBITORS
Laser Raman spectroscopy "for in-situ" analysis of corrosion films on metals, 15:48866 (R;US)

COSMIC DUST
An almost total disjunction between emission and absorption dust features - what does it tell us, 15:49766 (RA;FR)
Infrared spectroscopy of dust, 15:49759 (RA;FR)
Interstellar extinction in the infrared, 15:49760 (RA;FR)
Spectropolarimetry as a diagnostic of the interstellar medium, 15:49761 (RA;FR)

COSMIC GAMMA BURSTS
Distance limits for gamma-ray bursts from galactic neutron stars, 15:49843 (BA;US)

COSMIC GASES
Photodissociation regions: observations and theory, 15:49763 (RA;FR)
Statistical characteristics of turbulence in giant molecular clouds. Part 1: 1. Spectra in inertial range, 15:49814 (R;UA)
Statistical characteristics of turbulence in giant molecular clouds. Part 2: 2. Clump properties, 15:49815 (R;UA)
The excitation of molecular hydrogen and its significance, 15:49775 (RA;FR)

COSMIC PARTICLES
See COSMIC RADIATION

COSMIC RADIATION
Cosmic ray production in plasma z pinches, 15:49809 (R;SU;In Russian)
Improved model for solar cosmic ray exposure in manned Earth orbital flights, 15:49716 (R;US)

COSMIC X-RAY BURSTS
The 1973 x-ray outburst of 4U1145-61, 15:49842 (BA;US)

COSMIC X-RAY SOURCES
See also COSMIC X-RAY BURSTS

Ground-based observations of celestial x-ray sources, 15:49832 (RA;ZA)

COSMOGONY
See COSMOLOGY

COSMOLOGICAL MODELS
On the thermodynamics of one-fluid Szekeres'like cosmologies, 15:49746 (R;BR)

COSMOLOGY
Classical theory of radiating strings, 15:49823 (R;GB)
Cosmological baryon and lepton number in the presence of electroweak fermion-number violation, 15:49820 (R;US)
Evolution of light domain walls interacting with dark matter, part 1, 15:49821 (R;US)
The microwave background in steady-state cosmology, 15:49800 (RA;FR)
Thermal relics: Do we know their abundances, 15:49822 (R;US)

COSMOS
See UNIVERSE

COSTA RICA
The text of the Agreement of 12 July 1973 between Costa Rica and the Agency for the application of safeguards in connection with the Treaty for the Prohibition of Nuclear Weapons in Latin America and the Treaty on the Non-Proliferation of Nuclear Weapons, 15:48389 (R;XA)

COUNTERFLOW COOLING TOWERS
See COOLING TOWERS

COUNTERS (RADIATION)
See RADIATION DETECTORS

COUNTY BUILDINGS
See PUBLIC BUILDINGS

COUPLINGS (MACHINE PARTS)

COURT BUILDINGS
See PUBLIC BUILDINGS

CRACK GROWTH
See CRACK PROPAGATION

CRACK PROPAGATION
Crack-arrest behavior in SEN wide plates of low-upper-shelf base metal tested under nonisothermal conditions: WP-2 series, 15:48608 (R;US)

CRACKING
Selective steam cracking for energy and raw materials savings: Final report, 15:48137 (R;LU)

CRACKS
Fatigue crack characterization by ultrasonic inspection, 15:49189 (R;US)

CRAY COMPUTERS
What do you do when the network is 1 to 2 orders of magnitude faster than the backplane bus?, 15:50243 (R;US)

CREEP
Stress versus temperature dependent activation energies in creep, 15:48852 (R;US)

CREOSOTE
Best demonstrated available technology (BDAT) background document for waste-water treatment sludges generated in the production of creosote K035. Final report, 15:49510 (R;US)
Final best demonstrated available technology (BDAT) background document for K001 (addendum) and U051 (creosote). Volume 3, 15:49477 (R;US)
Final response to BDAT related comments document. K017/K028-K029, K095-096, K022, K025, K035, K026, K083, K024. Volume 1-M, 15:49527 (R;US)

CRESOLS
Anaerobic fluid-bed treatment of coal conversion wastewater: Tenth quarterly technical progress report, November 15, 1988–February 15, 1988, 15:48093 (R;US)

CRESYLIC ACID
See CRESOLS

CRITICAL HEAT FLUX
Present status of research on boiling critical heat flux at low flow velocity, 15:49183 (RA;JP;In Japanese)

CROPPING SYSTEMS
See CULTIVATION TECHNIQUES

CROPS
Methods to utilize tobacco kilns for curing (drying) and/or storage of alternate crops: Interim report. 1988 year, 15:48821 (R;CA)
Versatility of tobacco kilns eases shift to alternate crops, 15:48818 (R;CA)

CROSSFLOW COOLING TOWERS
See COOLING TOWERS

CRUDE CARRIERS

OXYGEN

DISTILLATION EQUIPMENT
Modelization and PC-based control of a distillation column - heat pump system, 15:48811 (R;FR;In French)

DISTRIBUTED DATA PROCESSING
The scalable coherent interface, IEEE P1596: Status and possible applications to data acquisition and physics, 15:49334 (J;US)

DISTRIBUTION
An information system for 20 kV electricity distribution networks integrated to telecontrol and automation, 15:50236 (R;FI;In Finnish)
Development of an energy management system, 15:48831 (R;FI;In Finnish)

DISTRICT HEATING
Development of an energy management system, 15:48831 (R;FI;In Finnish)
Vester Nebel combined collective heat supply system: Demonstration project: Final report, 15:48828 (R;LU)

DIVERTORS
KFA Neutron irradiation programme on materials for high heat load components of fusion devices, 15:50171 (RA;FR)

DNA REPAIR
[DNA repair and mutagenesis]: Foreign trip report, July 23, 1990–August 25, 1990, 15:49645 (R;US)

DNA SEQUENCING
Development of a small gantry robotic workcell for deoxyribonucleic acid (DNA) filter array construction, 15:49644 (R;US)
Stable isotope labels for DNA sequencing and mapping, 15:49647 (BA;US)
X-ray holography for sequencing DNA, 15:49652 (R;US)
DOCUMENTATION
List of publications 1989, 15:50208 (R;CS;In Czech, English)
DOEL-4 REACTOR
DOEL 4 - loss of external load transient: Simulation and analysis, 15:48556 (RA;XA)
DOGS
Application of high-frequency ventilation to treatment of chemical-warfare casualties: Animal and theoretical studies (application of high-frequency transtracheal jet ventilation to treatment of chemical-warfare casualties). Final report, March 1983-December 1986, 15:49410 (R;US)
Application of high-frequency ventilation to treatment of chemical-warfare casualties: Animal and theoretical studies. Annual report, 1 March 1984-28 February 1985, 15:49411 (R;US)
DOMAIN STRUCTURE
Chiral interface at the finite temperature transition point of QCD, 15:50048 (R;US)
Evolution of light domain walls interacting with dark matter, part 1, 15:49821 (R;US)
DOMESTIC WASTES
See MUNICIPAL WASTES
DORMITORIES
See RESIDENTIAL BUILDINGS
DOSE REDUCTION FACTOR
See RADIOPROTECTIVE SUBSTANCES
DOSE RELATIVE FACTOR
See RADIOPROTECTIVE SUBSTANCES
DOUBLE BETA DECAY
Double beta decay, neutrino physics, nuclear structure and isospin and spin-isospin symmetries, 15:49926 (R;BR)
DPA
See DISPLACEMENT RATES
DPO
See ORGANIC PHOSPHORUS COMPOUNDS
DRAINAGE
Predicted drainage at a semiarid site: Sensitivity to hydraulic property description and vapor flow, 15:48287 (R;US)
Red Canyon wash infiltration studies, 15:49592 (R;US)
DRAINAGE AREAS
See DRAINAGE
DRAINAGE SYSTEMS
See DRAINAGE
DREDGE SPOIL
General design memorandum, Gulfport Harbor, Mississippi. Design Memorandum Number 1. Appendix E. Thin-layer disposal. Final report, 15:49587 (R;US)
DRESDEN-2 REACTOR
Hydrogen water chemistry fuel surveillance at Dresden-2, 15:48530 (R;US)
DRF
See RADIOPROTECTIVE SUBSTANCES
DRIFT CHAMBERS
Development of second level trigger system based on a microprocessor array in the TRISTAN VENUS experiment, 15:49314 (RA;JP)
Fast-cycling minidrift chamber with freon-14 (80%) and isobutan (20%) mixture, 15:49299 (R;SU;In Russian)
High pressure gas scintillation drift chambers with wave-shifter fiber readout, 15:49345 (J;US)
Minidrift chambers. Operation with different gas mixtures, 15:49296 (R;SU;In Russian)
Upgrade of the AMY trigger system, 15:49315 (RA;JP)
DRILL HOLES
See BOREHOLES
DRILL SHIPS
See OFFSHORE PLATFORMS
DRILLING EQUIPMENT
Recent field trials of directional boring equipment for emplacing a borehole grid around and beneath a simulated waste site, 15:49742 (R;US)
DRILLING PLATFORMS
See OFFSHORE PLATFORMS
DROPLETS
Summary of the NAPAP state of science report on deposition monitoring in North America, 1979–1987, 15:49457 (R;US)
DRY DEPOSITION
See DEPOSITION
DRY-TYPE COOLING TOWERS
See COOLING TOWERS
DTO
See HEAVY WATER
DUAL-PURPOSE POWER PLANTS
Low-cost cogeneration system controller development. Final report, May 1988-July 1989, 15:48823 (R;US)
DUSTS
See also COSMIC DUST
Fabric filters: Filtermedia, 15:49553 (RA;FI)
Recycling of electric-arc-furnace dust, 15:48824 (R;US)
Results of the radiological survey at the Granite City Steel faciltiy, Granite City, Illinois, 15:49575 (R;US)
The theory and technics of particle measuring methods: Controlling measurements. Dust, 15:49556 (RA;FI)
DYE LASERS
High-pulse-energy flashlamp pumpable laser dyes. Interim technical report, 1 October 1989-31 March 1990, 15:49204 (R;US)
Ultranarrow-bandwidth vacuum ultraviolet (VUV)-XUV laser system, 15:49140 (RA;US)
DYES
Chemistry of anomalous-dispersion phase-matched second harmonic generation, 15:49084 (BA;US)
High-pulse-energy flashlamp pumpable laser dyes. Interim technical report, 1 October 1989-31 March 1990, 15:49204 (R;US)
DYMAC SYSTEM
See NUCLEAR MATERIALS MANAGEMENT
PLUTONIUM
DYNAMIC MATERIALS ACCOUNTABILITY SYSTEM
See NUCLEAR MATERIALS MANAGEMENT
PLUTONIUM
DYSPROSIUM 152
Population of superdeformed bands, the competition with fission, and the barrier between normal and superdeformed states, 15:50011 (R;US)
DYSPROSIUM COMPLEXES
On the stability and bonding in bis(η_7-arene)lanthanide complexes, 15:49063 (RA;US)
DYSPROSIUM OXIDES
Excess oxygen defects in layered cuprates, 15:48913 (R;US)

E

E CODES
Software for the ODRA and ODRENOK computers; programs for text file processing, 15:50220 (R;SU;In Russian)
EARTH ATMOSPHERE
See also EARTH MAGNETOSPHERE
IONOSPHERE
THERMOSPHERE
Deposition of airborne particles from fractured spent fuel or high-level waste, 15:48374 (BA;US)
Discussion paper on environmental hazards on the Moon, in low Earth orbit, and in low Mars orbit, 15:49817 (R;US)
Survey for impacts of global environmental issues on utilizations of alternative energies for oil, 15:49469 (R;JP;In Japanese)
EARTH MAGNETOSPHERE
See also MAGNETOTAIL
PLASMASPHERE
Development of a comprehensive magnetohydrodynamic model of solar-terrestrial interaction. Final report, 1 March 1986-30 September 1988, 15:49854 (R;US)

Viking data analysis. Final technical report, August 1986-March 1990, 15:49853 (R;US)

EARTH PLANET
Geometrical and dynamical characteristics of the Earth, the Moon and Terrestrial planets. Part 1: 1.Topographic surfaces and Gravitational fields, 15:49812 (R;UA;In Russian)

EBIC
See SCANNING ELECTRON MICROSCOPY

EBR-2 REACTOR
Command validation of secondary EM [electro-magnetic] pump system in the EBR-II [Experimental Breeder Reactor-II], 15:48611 (R;US)
Sensor validation for power plants using adaptive backpropagation neural network, 15:48616 (J;US)

ECCS
Bias in peak clad temperature predictions due to uncertainties in modeling of ECC bypass and dissolved non-condensable gas phenomena, 15:48664 (R;US)

ECOLOGICAL COMMUNITIES
See ECOSYSTEMS

ECOLOGICAL SUCCESSION
The use of cover crops for the maintenance of rights-of-way vegetation: A survey of the literature on succession, cover crops competition and trees, 15:48677 (R;CA)

ECOLOGY
[International meeting of ecology]: Foreign trip report, August 20, 1990–August 30, 1990, 15:49574 (R;US)
[Modeling of ecosystems]: Foreign trip report, August 21, 1990–September 4, 1990, 15:49412 (R;US)

ECOSYSTEMS
See also AQUATIC ECOSYSTEMS
[Modeling of ecosystems]: Foreign trip report, August 21, 1990–September 4, 1990, 15:49412 (R;US)

ECR HEATING
Diagnosis of superthermal electrons using cyclotron radiation, 15:50121 (R;FR)

EDDINGTON THEORY
General relativistic hydrodynamics and radiation transport, 15:50106 (BA;US)
Self-sustained mechanism of mass transfer and evolution of very low mass x-ray binaries, 15:49841 (BA;US)

EDTA
Strategies for utilizing ferrous*EDTA chelate as an additive in combined SO_2/NO_x aqueous scrubbing systems, 15:48499 (R;US)

EDUCATION
US Nuclear Engineering Education: Status and prospects, 15:48835 (R;US)

EFFLUENTS (LIQUID)
See LIQUID WASTES

EFFLUENTS (RADIOACTIVE)
See RADIOACTIVE EFFLUENTS

EIGENVALUES
Solution of eigenvalue problem for one class of hypersingular quasipotential integral equations, 15:50101 (R;SU;In Russian)

EINSTEIN GRAVITATION THEORY
See GENERAL RELATIVITY THEORY

EINSTEIN-DE SITTER MODEL
See COSMOLOGICAL MODELS

EKU
See EREVAN SYNCHROTRON

ELASTIC SCATTERING
See also COMPTON EFFECT
Neutron scattering in solid state physics and materials science, 15:48625 (RA;FR)

ELECTRIC BATTERIES
See also LEAD-ACID BATTERIES
METAL-NONMETAL BATTERIES
Shipping, use, and disposal/recycle considerations for sodium/beta batteries in electric vehicle (EV) applications, 15:48838 (R;US)

ELECTRIC CONDENSERS
See CAPACITORS

ELECTRIC FIELDS
Electric and magnetic fields and your health: A report of the Working Group on Electric and Magnetic ELP Fields, 15:49727 (R;CA)
The role of elf field dosimetry and bioeffects mechanisms in relating in vitro to in vivo exposures, 15:49730 (R;US)

ELECTRIC MOTORS
Japanese power electronics inverter technology and its impact on the American air conditioning industry, 15:48793 (R;US)

ELECTRIC POTENTIAL
An automated linearity test for direct voltage calibrators, 15:49386 (R;US)

ELECTRIC POWER
See also HYDROELECTRIC POWER
An information system for 20 kV electricity distribution networks integrated to telecontrol and automation, 15:50236 (R;FI;In Finnish)
Development of an energy management system, 15:48831 (R;FI;In Finnish)
Electricity: Getting more with less, 15:48802 (J;US)
Utilization of resources of the wood pulping industry - a holistic view, 15:48826 (RA;FI)

ELECTRIC POWER INDUSTRY
Guide for the application and use of valves in power plant systems: Final report, 15:48602 (R;US)
Manitoba Hydro application for an order requesting a general rate review and approval of certain rate adjustments effective April 1, 1990, 15:48753 (R;CA)
Survey of utility real-time pricing programs in the U.S, 15:48683 (R;JP;In Japanese)

ELECTRIC UTILITIES
Alberta electric industry annual statistics 1987, 15:48754 (R;CA)
Cogeneration and independent power production: Market insight and outlook: Final report, 15:48750 (R;US)
Commercial sector gas cooling technology frontier and market share analysis, 15:48771 (R;US)
DSM [Demand-Side-Management]: Transmission and distribution impacts: Volume 2, Application on spatial frequency analysis: Final report, 15:48749 (R;US)
Electric utility benefits of superconducting magnetic energy storage, 15:48497 (R;US)
Geothermal ground-loop preinstallation project at Walden Pond: Final report, 15:48780 (R;US)
Least-cost planning for Pacific Gas and Electric: Stage 1: Load Management Strategy Testing Model (LMSTM) calibration, 15:48751 (R;US)
Physical vulnerability of electric systems to natural disasters and sabotage, 15:48517 (R;US)
Program experience and its regulatory implications: A case study of utility lighting efficiency programs, 15:48784 (R;US)

ELECTRIC-POWERED VEHICLES
A microprocessor based charge control system for the simultaneous charging of several batteries with one charge controller: Final report for 1989, 15:48839 (R;US)
Shipping, use, and disposal/recycle considerations for sodium/beta batteries in electric vehicle (EV) applications, 15:48838 (R;US)

ELECTRICITE DE FRANCE
DER 89: main facts, 15:48736 (R;FR;In French)

ELECTROCATALYSTS
Electrocatalyst surfaces. Final report, December 1986-November 1989, 15:48762 (R;US)
Simultaneous particulates NO_x, SO_x removal from flue gas by all solid-state electrochemical technology: Technical progress report No. 2, October 1, 1987–December 31, 1987, 15:48504 (R;US)
Simultaneous particulates, NO_x, SO_x removal from flue gas by all solid-state electrochemical technology: Technical progress report No. 3, January 1, 1988–March 31, 1988, 15:48505 (R;US)
Simultaneous particulates, NO_x, SO_x removal from flue gas by all solid-state electrochemical technology: Technical progress report No. 4, April 1, 1988–June 30, 1988, 15:48506 (R;US)

Simultaneous particulates, NO_x, SO_x removal from flue gas by all solid-state electrochemical technology: Technical progress report No. 1, July 15, 1987–October 1, 1987, 15:48503 (R;US)
Simultaneous particulates, NO_x, SO_x removal from flue gas by all solid-state electrochemical technology: Technical progress report No. 6, October 1, 1988–December 31, 1988, 15:48508 (R;US)
Simultaneous particulates, NO_x, SO_x removal from flue gas by all solid-state electrochemical technology: Technical progress report No. 5, July 1, 1988–September 30, 1988, 15:48507 (R;US)
Work in progress, 15:49105 (RA;US)

ELECTROCHEMICAL CELLS
See also ELECTRIC BATTERIES
FUEL CELLS
Analysis and simulation of electrochemical systems, 15:49115 (RA;US)
High performance electrochemical generators, 15:48764 (R;FR;In French)
In situ laser Raman spectroscopy of copper anodization in alkaline media, 15:48694 (RA;US)
In situ scanning tunneling microscopy of Pb multilayer deposits on Ag, 15:48695 (RA;US)
Structural changes of oxide films during anodization of p-doped silicon in aqueous ammonium fluoride, 15:48696 (RA;US)
Surface layers on battery materials, 15:48693 (RA;US)
Work in progress, 15:49103 (RA;US)

ELECTROCHEMISTRY
Engineering analysis of electrolytic gas evolution, 15:49101 (RA;US)
Work in progress, 15:50234 (RA;US)

ELECTRODEPOSITION
Application of video microscopy to in situ studies of electrodeposition, 15:48692 (RA;US)

ELECTRODES
See also ANODES
CATHODES
Chemical stability of sodium beta″-alumina electrolyte in sulfur/sodium polysulfide melts, 15:49111 (RA;US)
Current distribution near an electrode edge as a primary distribution is approached, 15:49116 (RA;US)
Electrode kinetics and electrocatalysis, 15:48840 (RA;US)
Microscopic resolution of mass-transfer enhancement at vertical gas-evolving electrodes, 15:49102 (RA;US)
Simultaneous particulates NO_x, SO_x removal from flue gas by all solid-state electrochemical technology: Technical progress report No. 2, October 1, 1987–December 31, 1987, 15:48504 (R;US)
Simultaneous particulates, NO_x, SO_x removal from flue gas by all solid-state electrochemcial technology: Technical progress report No. 7, January 1, 1989–March 31, 1989, 15:48509 (R;US)
Surface-enhanced Raman spectroscopic (SERS) measurements in the liquid phase, 15:49027 (BA;US)
The effect of Schmidt number on the Faradaic impedance, 15:49120 (RA;US)
Work in progress, 15:49103 (RA;US)

ELECTROLYTE TILES
See MATRIX MATERIALS

ELECTROLYTES
See also SOLID ELECTROLYTES
Determination of the diffusion coefficient from impedance data in the low-frequency range, 15:49118 (RA;US)
Evaluation of room-temperature chloroaluminate molten salts as electrolytes for high energy density batteries. Final report, June 1988-April 1990, 15:48691 (R;US)
Explicit approximations to the mean spherical approximation (MSA) for electrolyte systems with unequal ion sizes, 15:50232 (RA;US)
Thermodynamics of electrolyte mixtures. Activity and osmotic coefficients consistent with the higher-order limiting law for symmetrical mixing, 15:49044 (RA;US)
Transference number calculations for sodium polysulfides, 15:49119 (RA;US)

ELECTROMAGNETIC FIELDS
Modified-Yee field solutions in the AMOS wakefield code, 15:49237 (R;US)
The role of elf field dosimetry and bioeffects mechanisms in relating in vitro to in vivo exposures, 15:49730 (R;US)
Vacuum polarization of electromagnetic field and electrodynamic processes on nucleus, 15:49897 (R;SU;In Russian)

ELECTROMAGNETIC RADIATION
See also RADIOWAVE RADIATION
X RADIATION
Forced scattering of a non-ordinary electromagnetic wave by an electron beam in a plasma in magnetic field, 15:50157 (R;UA;In Russian)
Integral equations for elastic wave scattering on nonuniformities in anisotropic media, 15:49235 (R;UA;In Russian)
Integrated optical modulators for analog signal transmission, 15:49380 (R;US)

ELECTROMAGNETIC WAVES
See ELECTROMAGNETIC RADIATION

ELECTRON ACCEPTOR
See ELECTRONS

ELECTRON BEAM INDUCED CURRENT
See SCANNING ELECTRON MICROSCOPY

ELECTRON BEAMS
Characteristics of the electron beam extracted onto the Deuteron-2 installation in the low background room of the Erevan synchrotron, 15:49248 (R;SU;In Russian)
Initial performance of the wire imaging synchrotron radiation detector, 15:49268 (J;US)
MONT3E: A Monte Carlo electron heat transfer code, 15:50088 (R;US)
Stochastic electron beams in the ion-focused regime, 15:49893 (R;US)

ELECTRON CHANNELING
Plane channeling and radiation of ultrarelativistic electrons in thick crystals, 15:50070 (R;SU;In Russian)

ELECTRON COLLISIONS
See also ELECTRON-ATOM COLLISIONS
ELECTRON-MOLECULE COLLISIONS
MONT3E: A Monte Carlo electron heat transfer code, 15:50088 (R;US)
The physics of electronic and atomic collisions, 15:49868 (B;US)

ELECTRON CYCLOTRON-RESONANCE HEATING
See ECR HEATING

ELECTRON DETECTION
Neural networks for triggering, 15:49269 (J;US)

ELECTRON DONOR

FRAGMENTS (PARTICLES)
See PARTICLES
FRANCE
Development of charcoal making processes in France, 15:48424 (RA;LU)
FREE ELECTRON LASERS
Operational status of the Brookhaven National Laboratory Accelerator Test Facility, 15:49225 (R;US)
Review of free-electron lasers, 15:49216 (R;US)
Use of a FEL [free electron laser] as a buncher for a TBA [two-beam accelerator] scheme, 15:49238 (R;US)
FREE RADICALS
See RADICALS
FREONS
Final best demonstrated available technology (BDAT) background document for K021. Volume 6, 15:49480 (R;US)
FRESH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS
FUEL ASSEMBLIES
Experimental research of local hydrodynamic characteristics of fast reactor fuel assembly peripheral zone. 7: Results of measurement in entry section of model, 15:48586 (R;CS;In Russian)
Experimental research of local hydrodynamic characteristics of fast reactor fuel assembly peripheral zone. 5: Results of measurement at group displacement. SPOGVY variants, 15:48584 (R;CS;In Russian)
Experimental research of local hydrodynamic characteristics of fast reactor fuel assembly peripheral zone. 6: Turbulent flow microstructure at a group displacement of the rods, 15:48585 (R;CS;In Russian)
ICARE, a computer code for severe fuel damage analysis - General description of the second version, ICARE2, 15:48534 (RA;XA)
FUEL CANS
Bias in peak clad temperature predictions due to uncertainties in modeling of ECC bypass and dissolved non-condensable gas phenomena, 15:48664 (R;US)
The MERLIN programme: Pt. 2, A description of the MERLIN rig, 15:48662 (R;GB)
FUEL CELL CATALYSTS
See ELECTROCATALYSTS
FUEL CELL POWER PLANTS
Molten carbonate fuel cell power plant systems studies, 15:48490 (R;US)
FUEL CELLS
See also ALCOHOL FUEL CELLS
ALKALINE ELECTROLYTE FUEL CELLS
HYDROCARBON FUEL CELLS
SOLID ELECTROLYTE FUEL CELLS
Proceedings of the second annual fuel cells contractors review meeting, 15:48760 (R;US)
FUEL COOLING INSTALLATIONS

Enrichment and fuel cycle developments, 15:48250 (RA;XA)
Low enriched uranium fuel in CANDU reactors, 15:48252 (RA;XA)
The nuclear fuel cycle: review on R and D policies in the Member States of the European Communities, 15:48215 (R;FR)
FUEL ELEMENTS
See also FUEL PINS
FUEL RODS
The Neutron Radiography Reactor (NRAD), 15:48620 (R;US)
FUEL GAS
See also NATURAL GAS
Assessment of modular IGCC plants based on entrained flow coal gasification supplemental studies, 15:48489 (R;US)
FUEL MANAGEMENT
Prospects for the French nuclear fuel management, 15:48247 (RA;XA)
FUEL PELLETS
Study on centrifugal acceleration of hydrogen pellets, 15:50175 (R;SU;In Russian)
FUEL PENCILS
See FUEL PINS
FUEL PINS
Reactor transients tests for SNR fuel elements in HFR reactor, 15:48635 (RA;FR;In German)
Thermal-hydraulic impact of failure of highly irradiated fuel pins on LMR passive safety, 15:48641 (R;US)
FUEL REPROCESSING PLANTS
Consolidated fuel reprocessing program simulation of a continuous rotary dissolver, 15:48226 (BA;US)
Development of remote disassembly technology for liquid-metal reactor (LMR) fuel, 15:48579 (R;US)
Estimate of the source term for a repository surface facility from the routine processing of spent fuel, 15:48228 (BA;US)
Reprocessing input data validation, 15:48388 (R;US)
The search for advanced remote technology in fast reactor reprocessing, 15:48224 (R;US)
FUEL ROD CONSOLIDATION
See FUEL RODS
FUEL RODS
Experimental research of local hydrodynamic characteristics of fast reactor fuel assembly peripheral zone. 7: Results of measurement in entry section of model, 15:48586 (R;CS;In Russian)
Irradiation testing of SIEMENS/KWU LWR fuel in the HFR Petten, 15:48531 (RA;FR)
FUEL SHEATHS
See FUEL CANS
FUEL SLUGS

Report of working group A: Priorities for research in sea-level rise, 15:49440 (RA;US)
Report of working group B: Priorities for research in agriculture and forestry, 15:49436 (RA;US)
Report of working group C: Priorities for research in energy policies, 15:49431 (RA;US)
Report of working group D: Priorities for research in risk management, 15:49424 (RA;US)
Responding to the threat of global warming: Options for the Pacific and Asia, 15:49454 (RA;US)
Reversing the atmospheric temperature warming in Taiwan, 15:49452 (RA;US)
Sea-level rise: Assessing the scientific debate, 15:49437 (RA;US)
The Japanese response to global warming - background, policy and research work, 15:49444 (RA;US)
The effects of a rapid global warming: Garden of eden or global impoverishment?, 15:49432 (RA;US)
US energy use: New technologies and policies in response to global warming, 15:49429 (RA;US)

Risk Assessment
Priority setting of strategies for limiting global warming, 15:49423 (RA;US)

GREENHOUSES
Evaluation of dehumidifiers in a rose greenhouse, 15:48789 (R;CA)

GREENLAND
A new field experiment in the Greenland ice cap to test Newton's inverse square law, 15:50107 (BA;US)

GROUND COVER
Soil erosion rates from mixed soil and gravel surfaces in a wind tunnel, 15:49584 (R;US)

GROUND SOURCE HEAT PUMPS
Engineering manual for the design and installation of ground and water source heat pump systems: Volume 1, 15:48769 (R;CA)
Geothermal ground-loop preinstallation project at Walden Pond: Final report, 15:48780 (R;US)
Installer's manual for the design and installation of ground and water source heat pump systems: Volume 2, 15:48770 (R;CA)

GROUND WATER
Contamination
Delegation of remedy selection to regions. Directive (Final), 15:49580 (R;US)
Health assessment for Cinnaminson Township (Block 702) Ground-Water Contamination, Cinnaminson, Burlington County, New Jersey, Region 2. CERCLIS No. NJD980785638. Final report, 15:49621 (R;US)
Health assessment for Elizabethtown Landfill, Elizabethtown, Lancaster County, Pennsylvania, Region 3. CERCLIS No. PAD980539712. Final report, 15:49614 (R;US)
Health assessment for Ewan Property, Shamong Township, Burlington County, New Jersey, Region 2. CERCLIS No. NJD980761365. Final report, 15:49626 (R;US)
Health assessment for Fletcher's Paint Works and Storage Facility Hazardous Waste Material, Milford, Hillsborough County, New Hampshire, Region 1. CERCLIS No. NHD981067614. Preliminary report, 15:49615 (R;US)
Health assessment for GBF, Inc., Dump, Antioch, Contra Costa County, California, Region 9. CERCLIS No. CAD980498562. Preliminary report, 15:49620 (R;US)
Health assessment for Gautier Oil Co., Inc., Gautier, Mississippi, Region 4. CERCLIS No.MSD098596489. Preliminary report, 15:49534 (R;US)
Health assessment for Imperial Oil Co., Inc./Champion Chemicals, Marlboro Township, Monmouth County, New Jersey, Region 2. CERCLIS No. NJD980654099. Final report, 15:49624 (R;US)
Health assessment for Intersil, Inc./Siemens Components, Cupertino, Santa Clara County, California, Region 9. CERCLIS No. CAD041472341. Preliminary report, 15:49627 (R;US)
Health assessment for Kent County Landfill (Houston), Houston, Kent County, Delaware, Region 3. CERCLIS No. DED980705727. Preliminary report, 15:49535 (R;US)
Health assessment for Landfill and Development Company, Mount Holly, New Jersey, Region 2. CERCLIS No. NJD048044325. Final report, 15:49611 (R;US)
Health assessment for Occidental Chemical Corporation Site, Lower Pottsgrove Township, Montgomery County, Pennsylvania, Region 3. CERCLIS No. PAD980229298. Preliminary report, 15:49623 (R;US)
Health assessment for Radiation Technology, Inc., Rockaway, Morris County, New Jersey, Region 2. CERCLIS No. NJD047684451. Final report, 15:49625 (R;US)
Health assessment for Recticon/Allied Steel Corporation, Parkerford, Chester County, Pennsylvania, Region 3. CERCLIS No. PAD053302865. Preliminary report, 15:49533 (R;US)
Health assessment for Rose Hill Regional Landfill, South Kingstown, Rhode Island, Region 1. CERCLIS No. RID980521025. Preliminary report, 15:49622 (R;US)
Health assessment for South Municipal Water Supply Well, Hillsborough County, Peterborough, Cheshire County, New Hampshire, Region 1. CERCLIS No. NHD980671069. Final report, 15:49616 (R;US)
Health assessment for Tex Tin Corporation, National Priorities List Site, Texas City, Texas, Region 6. CERCLIS No. TXD062113329. Preliminary report, 15:49617 (R;US)
Health assessment for Tri-City Industrial Disposal Site, Brooks, Kentucky, Region 4. CERCLIS No. KYD981028350. Preliminary report, 15:49619 (R;US)

Health assessment for Union Carbide Disposal/Red Oak Landfill Site, Red Oak, Iowa, Region 7. CERCLIS No. IAD980643509. Preliminary report, 15:49539 (R;US)
Plains hydrology and reclamation project: Spoil ground-water chemistry and its impacts on surface water, 15:48098 (R;CA)
Superfund Record of Decision (EPA Region 3): C and R Battery, VA. (First remedial action), March 1990. Final report, 15:49629 (R;US)

Monitoring
Liquid effluent study project plan: Environmental and waste management: Revision 2, 15:48293 (R;US)

Radionuclide Migration
Determination of diffusion coefficients in cohesive and sandy sediment from the area of Gorleben, 15:49597 (RA;DE;In German)
Influence of humic acids on the solubility and sorption characteristics of inorganic cations as exemplified by Cs, Sr, Zr and Nb, 15:49596 (RA;DE;In German)
Natural radionuclides in groundwater from J-13 well at the Nevada test site, 15:48310 (BA;US)
Red Canyon wash infiltration studies, 15:49592 (R;US)

Sampling
Performance evaluation of a groundwater and soil gas remedial action, 15:49566 (R;US)

Tritium
Hydrogeological investigations at the Asse salt mine, 15:48282 (RA;DE;In German)
Low-level tritium measurements in groundwater samples from Stripa-Pluton (Sweden), 15:49598 (RA;DE;In German)

Water Chemistry
Canada Brick Quarry Ground Water Survey 8th annual report, 1988-1989, 15:49605 (R;CA)

Water Pollution
Annual report 1988 of the GSF Institute of Hydrology, 15:49594 (R;DE;In German)

GROUND-WATER RESERVES
See AQUIFERS

GROUNDNUTS
See PEANUTS

GULF OF MEXICO
Gulf of Mexico Sales 131, 135, and 137: Central, western and eastern planning areas: Final environmental impact statement: Volume 1, Sections I through IV.C, 15:48705 (R;US)

GYPSUM
Investigations on the diffusion of inorganic pollutants in selected sediments from the Asse cap rock and in clay samples from the Niederwallach landfill, 15:49459 (RA;DE;In German)

H

H1 REGIONS
An implication of the IR identification of PAHs: the heating of the diffuse is gas, 15:49774 (RA;FR)

H2 REGIONS
Molecular hydrogen in the HII region G333.6-0.2, 15:49769 (RA;FR)
Polycyclic aromatic hydrocarbons in the infrared spectra of IRAS sources, 15:49765 (RA;FR)

HADRON REACTIONS
Generalized radiative corrections for hadronic targets, 15:49922 (R;FR;In French)
Partial inelasticity coefficients in hadron-nucleus interactions, 15:50045 (RA;SU;In Russian)

HADRON-HADRON INTERACTIONS
See also MESON-MESON INTERACTIONS
An off-energy description of hadron-hadron interaction within the P-matrix approach, 15:49945 (R;UA)

HADRONS
See also BARYONS
MESONS
Effective methods in QCD and the phenomenology of hadrons, 15:49920 (R;FR)
Measurement of α_s from energy-energy correlations in e^+e^- annihilation at 29 GeV, 15:49912 (R;US)

HAFNIUM 178
Description of low-lying vibrational $K^\pi \neq 0^+$ states of deformed nuclei in the quasiparticle-phonon nuclear model, 15:50041 (R;SU)

HALOGENATED ALIPHATIC HYDROCARBONS
See also CHLORINATED ALIPHATIC HYDROCARBONS
FLUORINATED ALIPHATIC HYDROCARBONS
FREONS
Final response to BDAT related comments document. Mixed radioactive hazardous wastes, polynuclear aromatic u wastes, halogenated aliphatic U wastes, non-halogenated aromatic U wastes, F002-f006, F019. Volume 1-J, 15:49525 (R;US)

HANDLING (WASTES)
See WASTE MANAGEMENT

HANFORD RESERVATION
An overview of the vitrification of defense high-level waste at the Hanford site, 15:48340 (BA;US)
Diffusion coefficients and hydraulic conductivity in unsaturated Hanford soils and sediments, 15:48336 (BA;US)
Liquid effluent study project plan: Environmental and waste management: Revision 2, 15:48293 (R;US)
State of Washington Department of Health, radioactive air emissions Permit FF01: Supplemental information, 15:48618 (R;US)

HARDNESS
Indentation testing of thin films and hard materials, 15:48912 (R;US)

HARTREE APPROXIMATION
See HARTREE-FOCK METHOD

HARTREE-FOCK METHOD
Functionals Hartree-Fock equations in the Schrodinger representation of quantum field theory, 15:50094 (R;BR)
Hartree-Fock integral method, 15:49862 (RA;BR;In Portuguese)

HAZARDOUS MATERIALS

Biodegradation
Use of Office of Research and Development's bioremediation expertise in Superfund removal program. Directive (Final), 15:48159 (R;US)

Chemical Analysis
Fiber optic spectrochemical emission sensor: A detector for chlorinated and fluorinated compounds, 15:49638 (BA;US)

Combustion
Reuse of incinerated soil residues in land reclamation, 15:49567 (R;US)

Ecological Concentration
Chemical use and distribution in the Regina aquifer region. Volume I: Executive Summary – Volume II: Report and appendices, 15:49602 (R;CA)

Environmental Exposure Pathway
Multimedia Environmental Pollutant Assessment System (MEPAS) application guidance: Volume 1, User's guide, 15:49548 (R;US)

Ground Disposal
Nonradioactive dangerous waste landfill closure/postclosure plan, 15:48263 (R;US)

Health Hazards
Multimedia Environmental Pollutant Assessment System (MEPAS) application guidance: Volume 2, Guidelines for evaluating MEPAS input parameters, 15:49583 (R;US)
Supplemental mathematical formulations: The Multimedia Environmental Pollutant Assessment System (MEPAS), 15:49547 (R;US)

Standards
Best demonstrated available technology (BDAT) background document for U and P wastes and multisource leachates. Volume D. Reactive U and P waste waters and nonwaste waters. Final report, 15:49501 (R;US)
Best demonstrated available technology (BDAT) background document for wastes, 15:49498 (R;US)
Best demonstrated available technology (BDAT) background document. Final, May 1990, 15:49474 (R;US)
Final best demonstrated available technology (BDAT) background document for K073. Volume 5, 15:49479 (R;US)

Final best demonstrated available technology (BDAT) background document for K086 (ink-formulation-equipment cleaning wastes). Volume 7, 15:49481 (R;US)
Final best demonstrated available technology (BDAT) background document for characteristic ignitable wastes (D001), characteristic corrosive wastes (d002), characteristic reactive wastes (D003), and P and U wastes containing reactive listing constituents. Volume 2, 15:49476 (R;US)
Final response to BDAT related comments document, 15:49515 (R;US)
Final response to BDAT related comments document. Volume 1A-1. General BDAT issues, 15:49577 (R;US)
Final response to BDAT related comments document: D001. Volume 1-B, 15:49607 (R;US)
Final response to BDAT related comments document: D002. Volume 1-C, 15:49518 (R;US)

Waste Management
Background document for Third Third wastes to support 40 CFR part 268 land-disposal restrictions. Final rule. Third Third waste volumes, characteristics, and required and available treatment capacity. Volume 1. Executive summary. Chapter 1 and Chapter 2, 15:49578 (R;US)
Background document for Third Third wastes to support 40 CFR part 268 land-disposal restrictions. Final rule. Third Third waste volumes, characteristics, and required and available treatment capacity. Volume 2. Chapter 3, 15:49579 (R;US)
Background document for Third Third wastes to support 40 CFR part 268 land-disposal restrictions. Final rule. Third Third waste volumes, characteristics, and required and available treatment capacity. Volume 3. Chapter 4. Appendix A-Appendix I, 15:49609 (R;US)
RI/FS improvements follow-up. Final report, 15:48709 (R;US)

HCLWR TYPE REACTORS
Present status and subjects of research on heat removal in high conversion light water reactors, 15:48570 (RA;JP;In Japanese)

KRYPTON 84 REACTIONS
NEON 20 REACTIONS
NICKEL 58 REACTIONS
NITROGEN 14 REACTIONS
XENON 132 REACTIONS
Charged pion production in nucleus-nucleus collisions AT E/A between 400 and 800 MeV, 15:49982 (R;FR;In French)
Determination of number of interacting nucleons in the nuclear pionization model, 15:50047 (R;SU;In Russian)
Filamentation in quark plasma at finite temperatures, 15:49925 (R;SU;In Russian)
Heavy ion transfer reactions: Status and prospects, 15:50024 (R;US)
K^--meson production in relativistic nuclear collisions and nuclear pionization model, 15:50044 (RA;SU;In Russian)
On the strange particle production in the nuclear pionization model, 15:50043 (R;SU;In Russian)
Proceedings of the workshop on heavy ion physics at the Alternating Gradient Synchrotron (AGS), 15:49978 (R;US)
Simulation of angle interval distribution in collisions of relativistic nuclei and comparison with experiment, 15:50046 (RA;SU;In Russian)
Towards high-density matter with relativistic heavy-ion collisions, 15:50030 (R;JP)

HEAVY ION SPECTROMETERS
High dynamic range discriminator for measurements with fragmented heavy ions, 15:49341 (J;US)

HEAVY IONS
A large-area, scintillation telescope for heavy ions, 15:49328 (J;US)
A many particle-tracking detector with drift planes and segmentel cathode readout, 15:49267 (J;US)
A study of wire chambers with highly segmented cathode pad readout for high multiplicity charged particle detection, 15:49323 (J;US)

HEAVY OILS
See PETROLEUM

HEAVY WATER
Analysis of the published calorimetric evidence for electrochemical fusion of deuterium in palladium. Technical report, 15:50108 (R;US)

High-resolution photoionization spectrum of water molecules in a supersonic beam, 15:49135 (RA;US)

HEAVY WATER COOLANT
See HEAVY WATER

HEAVY WATER COOLED REACTORS
See also JRR-3 REACTOR
SPERT-2 REACTOR
Practical application of passive safety features for the advanced neutron source cooling system, 15:48642 (R;US)

HEAVY WATER MODERATOR
See HEAVY WATER

HELIOTRON
Loss cone region in toroidal helical systems, 15:50181 (R;JP)

HELIUM
Development of a detailed core flow analysis code for prismatic fuel reactors, 15:48572 (R;US)

HELIUM 3
Low temperature susceptibility of large molar volume bcc solid ^{3}He, 15:49867 (R;FR)
Production of high energy nuclei ^{4}He,^{3}He,^{3}H,^{2}H in interaction 10.1 GeV/c protons with Be,Al,Cu,Ta, 15:50032 (R;SU)
Vacancies in BCC solid ^{3}He, 15:49866 (R;FR)

HELIUM 3 TARGET
Comparison of theoretical and phenomenological phase shifts for $^{3}He(\alpha,\alpha)^{3}He$ scattering at ^{7}Be excitation range between 25 and 42 MeV, 15:50034 (R;UA)

HELIUM 4 TARGET
Resonating-group method in calculations of low-energy reactions and $n^{4}He$ scattering with realistic NN interactions, 15:50026 (R;SU;In Russian)

HELIUM 7
Neutron-rich isotopes of the lightest elements, 15:49991 (R;SU)

HELIUM 9
Neutron-rich isotopes of the lightest elements, 15:49991 (R;SU)

HEMOGLOBIN
EPR studies of photolysis of HbNO at low temperatures, 15:50067 (R;BR)
Fluorescence line-narrowing spectral analysis of in vivo human hemoglobin-benzo[a]pyrene adducts: Comparison to synthetic analogues, 15:49646 (BA;US)

HEREDITY
See GENETICS

HETEROJUNCTIONS
Quasiparticle calculation of valence-band offset of AlAs-GaAs(001), 15:50085 (RA;US)

HEXENES
Dissociation of cyclohexene and 1,4-cyclohexadiene in a molecular beam, 15:49141 (RA;US)

HFR REACTOR
Application of reactor neutrons for activation analysis, 15:48626 (RA;FR)
High flux reactor Petten present and future programme, 15:48622 (RA;FR)
Irradiation program of the transuranium European institute in the HFR reactor, 15:48633 (RA;FR;In French)

HIGH-LEVEL RADIOACTIVE WASTES

Containers
An innovative cask for transporting defense high-level waste, 15:49171 (BA;US)
Fabrication and closure development of nuclear waste containers for storage at the Yucca Mountain, Nevada repository, 15:48369 (BA;US)
The use of performance assessments in Yucca Mountain repository waste package design activities, 15:48354 (BA;US)

Decontamination
Soluble high-level waste decontamination and disposal at the Savannah River Site, 15:48352 (BA;US)

Emission
Deposition of airborne particles from fractured spent fuel or high-level waste, 15:48374 (BA;US)

Ground Disposal
High-level radwaste plans in nine countries, 15:48371 (J;US)

Monitored Retrievable Storage
Current social systems issues in the U.S. high level waste management program, 15:48322 (BA;US)
Preliminary conceptual design description of the proposed DOE store-only monitored retrievable storage (MRS) facility, 15:48357 (BA;US)

Radioactive Waste Disposal
Linkage between site characterization program and performance and design data needs, 15:48359 (BA;US)
Social issues and challenges in the disposal of nuclear waste, 15:48363 (BA;US)

Radioactive Waste Processing
High level radioactive waste management at the Savannah River Site, 15:48329 (BA;US)
The technical review group: An application of the quality assurance program descriptions for defense high-level waste processing, 15:48351 (BA;US)

Underground Disposal
A description and status of the Yucca Mountain Project repository sealing program, 15:48323 (BA;US)
A waste package strategy for regulatory compliance, 15:48321 (BA;US)
Environmental program overview for a high-level radioactive waste repository at Yucca Mountain (Yucca Mountain Project), 15:48268 (R;US)
Hydrologic characterization of faults and other potentially conductive geologic features in the unsaturated zone, 15:48348 (BA;US)
International safeguards relevant to geologic disposal of high-level wastes and spent fuels, 15:48302 (BA;US)
MITT; International in-situ testing of simulated HLW forms: Preliminary analysis of SRL 165/TDS waste glass and metal systems, 15:48319 (BA;US)
Preclosure safety analysis for a prospective Yucca Mountain conceptual design repository, 15:48317 (BA;US)

Simulation of radionuclide retardation at Yucca Mountain using a stochastic mineralogical/geochemical model, 15:48308 (BA;US)
The international Stripa project: Technology transfer from cooperation in scientific and technological research on nuclear waste disposal, 15:48334 (BA;US)

Vitrification

An overview of the vitrification of defense high-level waste at the Hanford site, 15:48340 (BA;US)
Vapor hydration and subsequent leaching of transuranic-containing SRL and WV glasses, 15:48981 (BA;US)
Vitrification of defense high level radioactive waste at Savannah River and Hanford, 15:48325 (BA;US)

Waste Forms

DOE-EM/producers strategy for wasteform and process startup acceptance, 15:48326 (BA;US)
The DWPF product and its qualification program, 15:48353 (BA;US)

HIGH-TC SUPERCONDUCTORS

μ^+SR studies on $Sr_2CuO_2Cl_2$, La_2CuO_4, and Nd_2CuO_4: 2-d magnetism, local fields and muon sites, 15:48923 (R;US)
Design and testing of a high temperature superconducting current lead, 15:49205 (R;US)
Granular and superconducting-glass properties of the high-temperature superconductors, 15:48920 (R;US)
High-temperature superconductivity applications for electronic warfare and microwave systems. Final report, March 1988-March 1990, 15:49390 (R;US)
International workshop on ion beam modification and processing of high-Tc superconductors: Physics and devices: Program and abstracts, 15:48905 (R;GB)
Laser applications for high-T_c superconductors, 15:49206 (R;US)
$YBa_2Cu_3O_x$ superconductor coil: Processing and properties, 15:48914 (R;US)
[19th international conference on low-temperature physics]: Foreign trip report, August 15–25, 1990, 15:50089 (R;US)

HIGH-VOLTAGE PULSE GENERATORS

A hybrid pulse forming technique, 15:49220 (R;US)

HILACS

ECR [electron cyclotron resonance] ion sources and applications with heavy-ion linacs, 15:49240 (R;US)

HOLMIUM COMPLEXES

On the stability and bonding in bis(η-arene)lanthanide complexes, 15:49063 (RA;US)

HOLMIUM OXIDES

The upper critical field of $HoBa_2Cu_3O_{7-\delta}$ for H || c, 15:48918 (R;US)

HORIZONTAL AXIS TURBINES

Atmospheric performance of the special-purpose Solar Energy Research Institute (SERI) thin-airfoil family: Final results, 15:48484 (R;US)

HOSPITALS

Energy conservation and hospital hygiene, 15:48785 (R;FI;In Finnish)

HOT PLASMA

Possibility of using first collision probability method for solution of the problem of photon transport, 15:50125 (R;SU;In Russian)

HOT WATER HEATERS

See WATER HEATERS

HOUSES

A passive solar heating facility for existing houses: Demonstration project: Final report, 15:48473 (R;LU)
Indoor air quality in New Brunswick homes: Radon and radon daughters, 15:49464 (R;CA)
Testing of indoor radon-reduction techniques in 19 Maryland houses. Final report, January 1987-June 1989, 15:49531 (R;US)

HTGR TYPE REACTORS

Atom Transport
Island structure growth and continuous film production criteria. 1. Weak atom sources, 15:48884 (R;UA;In Russian)
Chemical Reactions
Work in progress, 15:49058 (RA;US)
Coordination Valences
Formation of oxyacids of sulfur from SO_2, 15:49051 (RA;US)
Deposition
Surface morphology of metals in electrodeposition, 15:48684 (RA;US)
Dissolution
Surface morphology of metals in electrodeposition, 15:48684 (RA;US)
Emissivity
Investigations of defined oxides for improving the determination of emissivity of high temperatures. Pt. 1 and 2. Pt. 1: Determination of emissivity and optical constants. - Pt. 2: Preparation and analysis of probes, 15:48874 (R;DE;In German)
Energy Transfer
Energy transfer and structural studies of molecules on surfaces, 15:49125 (RA;US)
Films
Island structure growth and continuous film production criteria. 1. Weak atom sources, 15:48884 (R;UA;In Russian)
Molecular Models
Molecular mechanics study of the structure of lanthanide complexes, 15:49091 (BA;US)
Passivation
Laser Raman spectroscopy "for in-situ" analysis of corrosion films on metals, 15:48866 (R;US)
Point Defects
[Defects in close-packed metals and alloys]: Foreign trip report, August 9, 1990–August 22, 1990, 15:48896 (R;US)
Self-Diffusion
Application of ion beam sputtering for diffusion study in solids, 15:50065 (R;GB)
Stacking Faults
Determination of the stacking fault energies of face centured cubic metals and alloys by X-rays diffraction, 15:48875 (R;BR;In Portuguese)
Standards
Best demonstrated available technology (BDAT) background document for U and P wastes and multi-source leachate (F039). Volume C. Nonwastewater forms of organic U and P wastes and multi-source leachate (F039) for which there are concentration-based treatment standards. Final report, 15:49505 (R;US)
Final response to BDAT related comments document. K017/K028-K029, K095-096, K022, K025, K035, K026, K083, K024. Volume 1-M, 15:49527 (R;US)
Final response to BDAT related comments document: General BDAT issues. Volume 1-A-3, 15:49517 (R;US)
Final response to BDAT related comments document: General BDAT issues. Volume 1-A-2, 15:49516 (R;US)
Synthesis
Work in progress, 15:49058 (RA;US)
Thermal Conductivity
Thermal conductivity of metals, 15:48892 (RA;US)
Thin Films
Island structure growth and continuous film production criteria. 2. Strong atom sources, 15:48885 (R;UA;In Russian)
Wear Resistance
Wear-metal analysis in engine oil by microwave digestion and atomic absorption spectroscopy. Final report, August 1987-January 1988, 15:48988 (R;US)
X-Ray Diffraction
Determination of the stacking fault energies of face centured cubic metals and alloys by X-rays diffraction, 15:48875 (R;BR;In Portuguese)
METEOROLOGY
A Nuisance Alarm Data System for evaluation of intrusion detectors, 15:49379 (R;US)
Atmospheric processes over complex terrain: Volume 23, No. 45, 15:49458 (R;US)

MUNICIPAL WASTES
Assessment of municipal solid waste for energy production in the western United States, 15:48833 (R;US)

Municipal solid waste feasibility of gasification with plasma arc: Phase 2. Environmental analyses, 15:48436 (RA;CA)

MUON SPIN RELAXATION
Spin dynamics of the itinerant helimagnet MnSi studied by positive muon spin relaxation, 15:50029 (R;JP)

MUON SPIN RESONANCE
See MUON SPIN RELAXATION

MUON SPIN ROTATION
See MUON SPIN RELAXATION

MUON-CATALYZED FUSION
Deuterium
μCF studies in University of Tsukuba, 15:50193 (RA;GB)
Diffusion of muonic hydrogen atoms, 15:50189 (RA;GB)
Experimental investigation of muon-catalysed fusion in pure deuterium: current status and future possibilities, 15:50183 (RA;GB)
Phase space, meson exchange and the photon connection in sticking, 15:50195 (RA;GB)
Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989, 15:50182 (R;GB)
Resonances in muonic systems, 15:50194 (RA;GB)
Deuterium Tritide
Interpretation of recent LAMPF results on dtμ formation, 15:50185 (RA;GB)
Fusion Yield
Review of μCF and new LAMPF results, 15:50184 (RA;GB)
Hydrogen 1
μCF studies in University of Tsukuba, 15:50193 (RA;GB)
Meetings
Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989, 15:50182 (R;GB)
Muonic Atoms
Angular-momentum alignment effects under slowing-down of muonic helium ion in the μ CF, 15:50196 (RA;GB)
Muonic Molecules
Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989, 15:50182 (R;GB)
Nuclear Reaction Kinetics
New results in muon catalyzed pd fusion, 15:50187 (RA;GB)
Tritium
μCF studies in University of Tsukuba, 15:50193 (RA;GB)
Diffusion of muonic hydrogen atoms, 15:50189 (RA;GB)
Phase space, meson exchange and the photon connection in sticking, 15:50195 (RA;GB)
Proceedings of an international symposium on muon catalysed fusion μCF - 89, held at Keble College, Oxford, 11-13 September 1989, 15:50182 (R;GB)
Resonances in muonic systems, 15:50194 (RA;GB)
Very Low Temperature
Interpretation of recent LAMPF results on dtμ formation, 15:50185 (RA;GB)
New results in muon catalyzed pd fusion, 15:50187 (RA;GB)

MUONIC ATOMS
Angular-momentum alignment effects under slowing-down of muonic helium ion in the μ CF, 15:50196 (RA;GB)

MUONIC MOLECULES
μCF studies in University of Tsukuba, 15:50193 (RA;GB)
Diffusion of muonic hydrogen atoms, 15:50189 (RA;GB)
Emission of muonic hydrogen isotopes from solid hydrogen layers into vacuum, 15:50188 (RA;GB)
Experiment for direct measurement of final sticking ω_s in muon catalyzed dt fusion, 15:50186 (RA;GB)
New results in muon catalyzed pd fusion, 15:50187 (RA;GB)
Resonances in muonic systems, 15:50194 (RA;GB)

MUONS
See also MUONS MINUS
μ particle detector, 15:49313 (RA;JP;In Japanese)
Rotational and temperature effects on Coulomb capture of muons by hydrogen molecules, 15:50190 (RA;GB)
Supersymmetric version of horizontal gauge interactions, 15:49931 (R;SU)

MUONS MINUS
μCF studies in University of Tsukuba, 15:50193 (RA;GB)
Angular-momentum alignment effects under slowing-down of muonic helium ion in the μ CF, 15:50196 (RA;GB)
Experiment for direct measurement of final sticking ω_s in muon catalyzed dt fusion, 15:50186 (RA;GB)
Phase space, meson exchange and the photon connection in sticking, 15:50195 (RA;GB)
Resonances in muonic systems, 15:50194 (RA;GB)
Review of μCF and new LAMPF results, 15:50184 (RA;GB)

MUSSELS
US Mussel Watch Program: Transuranic element data from Woods Hole Oceanographic Institution 1976-1983. Technical report, 15:49610 (R;US)

MUTAGENESIS
[DNA repair and mutagenesis]: Foreign trip report, July 23, 1990–August 25, 1990, 15:49645 (R;US)

MWPC
See MULTIWIRE PROPORTIONAL CHAMBERS

N

N*BARYONS
Perspectives of experimental study of electromagnetic form factors of unstable particles at UNK, 15:49911 (R;SU;In Russian)

N*RESONANCES

N-REACTOR
N reactor external events probabilistic risk assessment using NUREG-1150 methods, 15:48669 (R;US)

NAI DETECTORS
Possibility of experiments using radiation counters for test electron stability and Pauli principle violation in atoms, 15:49303 (R;SU;In Russian)
The shuttle activation monitor: A system for direct comparison of gamma-ray detector materials in a space environment, 15:49362 (J;US)

NAL SYNCHROTRON
See FERMILAB ACCELERATOR

NAPHTHA
Upgrading Fischer-Tropsch naphtha, 15:48078 (R;US)

NARORA-1 REACTOR
Pre-operational external radiation monitoring in NAPP environs using TLDs (Jan 1987 - Mar 1989), 15:50061 (R;IN)

NARORA-2 REACTOR
Pre-operational external radiation monitoring in NAPP environs using TLDs (Jan 1987 - Mar 1989), 15:50061 (R;IN)

NATIONAL ACCELERATOR LABORATORY
See FERMILAB ACCELERATOR

NATIONAL DEFENSE
See also BALLISTIC MISSILE DEFENSE
Strategic Defense Initiative three reasons to stay the course. Individual study project, 15:49407 (R;US)

NATURAL ACTIVITY
See NATURAL RADIOACTIVITY

NATURAL GAS
See also LIQUEFIED NATURAL GAS
A handbook for management of oil and gas activities on lands in Alaska: Petroleum industry practices, environmental impacts and stipulations, 15:48149 (R;US)
Alberta oil and gas industry annual statistics, 1988, 15:48133 (R;CA)
Alberta's reserves of crude oil, oil sands, gas, natural gas liquids, and sulphur, 15:48131 (R;CA)
Co-firing of natural gas and coal. Annual report, October 1988-September 1989, 15:48121 (R;US)
Commercial sector gas cooling technology frontier and market share analysis, 15:48771 (R;US)
Gas Research Institute 1991-1995 research and development plan and 1991 research and development program, 15:48177 (R;US)

Gulf of Mexico sales 131, 135, and 137: Central, Western, and Eastern planning areas: Final environmental impact statement: Volume 2, Sections IV.D. and IX, 15:48154 (R;US)
Natural gas monthly, June 1990, 15:48180 (R;US)
Outlook for demand growth in Asian countries, 15:48698 (RA;CA)
Physical Sciences Program Area 1990 contract status report, 15:48178 (R;US)
Potential issues associated with shipping oil and gas through the Labrador Sea and Strait of Belle Isle, 15:48170 (R;CA)
US oil and gas reserves by year of field discovery, 15:48125 (R;US)

NATURAL GAS DEPOSITS
Geologic interpretation of gravity anomalies, 15:48124 (R;US)
Geology of the Stoney Creek oil and gas field, and its implications regarding the tectonic evolution of the eastern Moncton subbasin, New Brunswick. Geoscience report No. 89-1, 15:48130 (R;CA)
Organic chemistry of mantle-derived xenoliths: Assessing the possibilities for deep sources of natural gas. Biennial report, November 1987-November 1989, 15:48179 (R;US)

NATURAL GAS DISTRIBUTION SYSTEMS
Pressure history of a gas pipeline, 15:48189 (R;CA)
State-of-the-art interior-piping-systems application: On-site H_2S/O_2 removal technology. Final report, June 1988-March 1989, 15:48190 (R;US)
State-of-the-art interior-piping-systems applications: Commercial buildings. Final report, June 1987-June 1989, 15:48792 (R;US)

NATURAL GAS GATHERING SYSTEMS
See NATURAL GAS DISTRIBUTION SYSTEMS

NATURAL GAS INDUSTRY
Environmental Studies Research Funds annual report, 1989, 15:48747 (R;CA)
Gas Research Institute 1991-1995 research and development plan and 1991 research and development program, 15:48177 (R;US)
Natural gas monthly, June 1990, 15:48180 (R;US)
Physical Sciences Program Area 1990 contract status report, 15:48178 (R;US)
U.S. regulatory environment, 15:48738 (RA;CA)

NATURAL GAS PROCESSING PLANTS
A technical and economic evaluation of sulphur basepad recovery and reclamation, 15:49585 (RA;CA)

NATURAL GAS WELLS
Alberta oil and gas industry annual statistics, 1988, 15:48133 (R;CA)

NATURAL GASOLINE PLANTS
See NATURAL GAS PROCESSING PLANTS

NATURAL RADIOACTIVITY
A study of radon variation in dwelling during 1988, 15:50062 (R;IN)
Pre-operational external radiation monitoring in NAPP environs using TLDs (Jan 1987 - Mar 1989), 15:50061 (R;IN)

NATURAL URANIUM
A technical and economic comparison of the conversion of natural and oxide reactor reprocessed uranium, 15:48243 (RA;XA)

NATURE RESERVES
Texas Barrier Islands Region ecological characterization atlas: Socioeconomic and natural features narrative, 15:49569 (R;US)

NEBULAE
See also PLANETARY NEBULAE
A survey of PAH emission in HII regions, planetary and protoplanetary nebulae, 15:49784 (RA;FR)
Ice grains in the dust disk of the bipolar nebula M 1-92, 15:49782 (RA;FR)
Interpretation of the 10 μ m and 20 μ m absorption bands in comets, the ism and in an external galaxy, 15:49758 (RA;FR)
Mapping and spectroscopy of the 3.3 μm feature in Orion, 15:49773 (RA;FR)
Nebulous matter, 15:49828 (RA;ZA)
Polycyclic aromatic hydrocarbons in the infrared spectra of IRAS sources, 15:49765 (RA;FR)

NEGATONS
See ELECTRONS

NEGATRONS
See ELECTRONS

NEODYMIUM CHLORIDES
Structure of molten salts, 15:48949 (R;US)

NEODYMIUM COMPLEXES
On the stability and bonding in bis(η-arene)lanthanide complexes, 15:49063 (RA;US)

NEODYMIUM LASERS
Diode laser-pumped single-mode 1.3-microns Nd: YALO microlaser. Final report, 15:49203 (R;US)

NEON 20 REACTIONS
Charged pion production in nucleus-nucleus collisions at E/A between 400 and 800 mev, 15:50007 (R;FR;In French)

NEON 20 TARGET
Search for strangeness-abundant quark-gluon matter in nucleus-nucleus and antiproton-nucleus interactions, 15:50042 (R;SU;In Russian)

NEOPRENE
Thin-film composite materials, Phase 2. Final report, 1 April-31 December 1986, 15:48948 (R;US)

NERVE CELLS
Analysis of soil samples for chemical warfare agents: Canadian contribution to a multinational round-robin analytical exercise. Memorandum report, 15:49409 (R;US)

NERVOUS SYSTEM
See also CENTRAL NERVOUS SYSTEM
Oscillation onset in neural delayed feedback, 15:49704 (R;US)

NET TOKAMAK
Irradiation testing for fusion technology. Current programme and future plans of KfK, 15:50170 (RA;FR)
Joint research centre fusion materials irradiations in HFR: Present status and prospectives, 15:50173 (RA;FR)
KFA Neutron irradiation programme on materials for high heat load components of fusion devices, 15:50171 (RA;FR)
Prestudy of burn control in NET: Second intermediate report, February 1990, 15:50113 (R;SE)
The function of the HFR, Petten, in the development of plasma facing components for fusion reactors, 15:50172 (RA;FR)

NEURAL NETWORKS
A unified framework for credit assignment, 15:50214 (R;US)
Classification of acoustic emission waveforms for nondestructive evaluation using neural networks, 15:50239 (R;US)
Sensor validation for power plants using adaptive backpropagation neural network, 15:48616 (J;US)

NEURONS
See NERVE CELLS

NEUTRALIZATION (CHEMICAL)
See PH VALUE

NEUTRINO OSCILLATION
Study of neutrino oscillations in the frejus experiment, 15:49915 (R;FR)

NEUTRINOS
See also SOLAR NEUTRINOS
Cosmological baryon and lepton number in the presence of electroweak fermion-number violation, 15:49820 (R;US)

NEUTRON BEAMS
Application of reactor neutrons for activation analysis, 15:48626 (RA;FR)
Neutron scattering in solid state physics and materials science, 15:48625 (RA;FR)
Nuclear physics at the HFR, 15:48624 (RA;FR)
Prospects and future utilization, 15:48621 (R;FR;In EN, DE)

NEUTRON CAPTURE
See NEUTRON REACTIONS

NEUTRON CAPTURE THERAPY
Clinical possibilities of neutron capture therapy, 15:49689 (RA;FR)

NEUTRON DETECTION
Experiment for direct measurement of final sticking ω_s in muon catalyzed dt fusion, 15:50186 (RA;GB)

NEUTRON DETECTORS
Design of thick apertures for high-resolution neutron penumbral imaging, 15:49327 (J;US)

Multi-energy neutron detector for counting thermal neutrons, high-energy neutrons, and gamma photons separately, 15:49364 (J;US)

NEUTRON DIFFRACTION
Neutron scattering in solid state physics and materials science, 15:48625 (RA;FR)

NEUTRON DIFFUSION EQUATION
A nodal method for the solution of the static, few-group diffusion equations in hexagonal geometry, 15:48593 (R;US)
To the problem of optimization of external and integral iteration algorithm in diffusion calculation of nuclear reactor, 15:48594 (R;SU;In Russian)

NEUTRON DOSIMETRY
Neutron detection based on superheated materials, 15:49355 (J;US)

NEUTRON ECONOMY
See NEUTRON FLUX

NEUTRON FLUX
Rod drop in the LR-0 reactor core comprising 55 fuel assemblies: A comparison of theoretical and experimental data, 15:48599 (R;CS;In Russian)

NEUTRON FLUX DENSITY
See NEUTRON FLUX

NEUTRON GUIDES
The design and construction of the neutron guide tubes in JRR-3, 15:48631 (R;JP;In Japanese)

NEUTRON LEAKAGE
The neutron leakage spectrum for an iron sphere with a central 14 MeV neutron source, 15:50056 (R;XA)

NEUTRON MATTER
See NUCLEAR MATTER

NEUTRON RADIOGRAPHY
Neutron radiography, 15:48405 (RA;FR)

Updated excitation and ionization cross sections for electron impact on atomic oxygen. Quarterly report, 15:49891 (R;US)
OXYGEN 22
Beta decay of ^{22}O, 15:50002 (R;FR)
OXYGEN EFFECT (RADIOBIOLOGY)
See OXYGEN
OXYGEN HYDRIDES
See WATER
OXYGEN ISOTOPES
See also OXYGEN 22
Investigation of the particle stability of the isotope ^{26}O in the nuclear reactions 44 MeV/A ^{48}Ca+Ta, 15:50005 (RA;SU)
OXYGEN LOGS
See NEUTRON-GAMMA LOGGING
OXYMETHYLENE
See FORMALDEHYDE
OZONE
A study of Ontario Hydro's contribution to ozone levels in Ontario: Phase 1: Literature review, 15:48450 (R;CA)
Acid air pollutant mixtures: Respiratory system responses and effects of exercise, 15:49720 (R;US)

P

P CODES
Multi-dimensional modeling of unsaturated flow in the vicinity of exploration shafts and fault zones at Yucca Mountain, Nevada, 15:48347 (BA;US)
Software for the ODRA and ODRENOK computers; programs for text file processing, 15:50220 (R;SU;In Russian)
PACIFIC NORTHWEST LABORATORIES
See BATTELLE PACIFIC NORTHWEST LABORATORIES
PACIFIC NORTHWEST REGION
See FEDERAL REGION X
PACIFIC OCEAN
Report on the preparatory investigation of the Pacific energy information network system, 15:48741 (R;JP;In Japanese)
PACKAGING
Development of hermetic microminiature connectors, 15:49217 (R;US)
PAH
See POLYCYCLIC AROMATIC HYDROCARBONS
PALLADIUM
Analysis of the published calorimetric evidence for electrochemical fusion of deuterium in palladium. Technical report, 15:50108 (R;US)
Cold fusion in palladium: the experimental results from PSI, 15:50197 (RA;GB)
PAPER CHROMATOGRAPHY
See CHROMATOGRAPHY
PAPER INDUSTRY
Daishowa Canada Ltd., Peace River pulp mill industrial development permit to use gas as a supplementary fuel: Decision 90-7, 15:48185 (R;CA)
Non-waste technology - a challenge to biotechnology, 15:48827 (RA;FI)
PARAGENES
See PLASMIDS
PARALLEL PROCESSING
Language support for parallel computation. Final report, September 1988-September 1989, 15:50211 (R;US)
Parallel performance models for the nodal transport method on the hypercube, 15:50213 (R;US)
Superconcurrent processing: A dynamic approach to heterogeneous parallelism. Final report, 15:50210 (R;US)
Use of fiber-optics for real-time control and data acquisition, 15:49270 (J;US)
PARAMAGNETIC RESONANCE (NUCLEAR)
See NUCLEAR MAGNETIC RESONANCE
PARTICLE IDENTIFICATION
Particle identification in B-physics, 15:49311 (RA;JP;In Japanese)
PARTICLE PRODUCTION
See also ELECTROPRODUCTION
Charged pion production in nucleus-nucleus collisions at E/A between 400 and 800 mev, 15:50007 (R;FR;In French)
PARTICLES
See also DROPLETS
INTERSTELLAR GRAINS
PARTICULATES
Deposition, corrosion, erosion and sulfur emission studies related to coal combustion: Annual report, 15:48109 (R;US)
Fabric filters: Filtermedia, 15:49553 (RA;FI)
Optical measuring methods, 15:49554 (RA;FI)
Particle formation in combustion, 15:49552 (RA;FI)
Size distribution measurement of particles in flue gases, 15:49550 (RA;FI)
The theory and technics of particle measuring methods: Controlling measurements. Dust, 15:49556 (RA;FI)

PARTICULATES
Deposition of airborne particles from fractured spent fuel or high-level waste, 15:48374 (BA;US)
Determination of the levels of dinitropyrenes on diesel-exhaust particulate exhibiting excess mutagenic activity, 15:48123 (R;CA)
Inhalation toxicology of combined acid and soot particles. Final report, 15:49719 (R;US)
Mechanisms of surface enrichment and adhesion of coal combustion particulates: Eighth and ninth quarterly reports, June 16, 1988–December 15, 1988, 15:48113 (R;US)
Mechanisms of surface enrichment and adhesion of coal combustion particulates: Sixth and seventh quarterly reports, December 16, 1987–June 15, 1988, 15:48112 (R;US)
The determination of the levels of dinitropyrenes on diesel exhaust particulate exhibiting excess mutagenic activity: Final report, 15:48841 (R;CA)

PARTITION CHROMATOGRAPHY
See CHROMATOGRAPHY

PASSIVE SOLAR HEATING SYSTEMS
A passive solar heating facility for existing houses: Demonstration project: Final report, 15:48473 (R;LU)

PCB
See CHLORINATED AROMATIC HYDROCARBONS

PEACH BOTTOM-2 REACTOR
Radionuclide release calculations for selected severe accident scenarios: Supplemental calculations, 15:48663 (R;US)

PEAKING POWER PLANTS
Draft guidelines for an environmental impact assessment: N.B. Power, Millbank Generating Station, 15:48151 (R;CA)

PEANUTS
Handling and curing peanuts in modified tobacco bins, 15:48822 (R;CA)

PELLETS (FUEL)
See FUEL PELLETS

PENETRATORS
Tethered rocket as a vehicle for penetration and impact testing: Development report, 15:49393 (R;US)

PENNSYLVANIA
Health assessment for Elizabethtown Landfill, Elizabethtown, Lancaster County, Pennsylvania, Region 3. CERCLIS No. PAD980539712. Final report, 15:49614 (R;US)
Health assessment for Occidental Chemical Corporation Site, Lower Pottsgrove Township, Montgomery County, Pennsylvania, Region 3. CERCLIS No. PAD980229298. Preliminary report, 15:49623 (R;US)
Health assessment for Recticon/Allied Steel Corporation, Parkerford, Chester County, Pennsylvania, Region 3. CERCLIS No. PAD053302865. Preliminary report, 15:49533 (R;US)
Superfund Record of Decision (EPA Region 3): Westline, PA. (First remedial action) (amendment), March 1990, 15:49630 (R;US)

PENTADIENES
On the way to ligating oligocyclopentadienyls: Synthesis and preliminary reactivity of the two isomeric tercyclopentadienyls and their transition-metal complexes, 15:49053 (RA;US)

PEOPLE
See HUMAN POPULATIONS

PERMANENT MAGNETS
Metallurgical processes in multi-component rare earth-transition metal permanent magnet alloys. Final report, 15 May 1987-14 May 1990, 15:48854 (R;US)

PERMEABILITY COEFFICIENT (FLUID MECHANICS)
See HYDRAULIC CONDUCTIVITY

PERSONNEL DOSIMETRY
Examples of robots and teleoperators at the Savannah River Site, 15:49175 (J;US)
Neutron detection based on superheated materials, 15:49355 (J;US)
X-ray spectrometry in vivo a Si(Li)-NaI(T1) detector, 15:49352 (J;US)

PERSONNEL FILM DOSIMETRY
See PERSONNEL DOSIMETRY

PETROCHEMISTRY
Vanadyl model compounds in size exclusion-inductively coupled plasma-atomic emission (SEC-ICP-AES) studies of metal complexes in heavy crude oils and residua, 15:48175 (BA;US)
X-ray absorption spectroscopic study of vanadium sites in fossil fuels and model compounds, 15:48090 (BA;US)

PETROLEUM
Biodegradation
Use of Office of Research and Development's bioremediation expertise in Superfund removal program. Directive (Final), 15:48159 (R;US)
Compatibility
Study of asphaltene flocculation in heavy oil and asphalt solutions, 15:48173 (R;CA)
Continental Shelf
An econometric analysis of exploration and extraction of oil on the U.K. continental shelf, 15:48142 (R;GB)
Coprocessing
Stable carbon isotope analysis of coprocessing materials: Quarterly technical progress report, July 1–September 30, 1989, 15:48076 (R;US)
Demulsification
The CANMET [Canada Centre for Mineral and Energy Technology] emulsion upgrading process, 15:48195 (RA;CA)
Econometrics
An econometric analysis of exploration and extraction of oil on the U.K. continental shelf, 15:48142 (R;GB)
Energy Source Development
A handbook for management of oil and gas activities on lands in Alaska: Petroleum industry practices, environmental impacts and stipulations, 15:48149 (R;US)
Energy Substitution
Survey for impacts of global environmental issues on utilizations of alternative energies for oil, 15:49469 (R;JP;In Japanese)
Exploration
An econometric analysis of exploration and extraction of oil on the U.K. continental shelf, 15:48142 (R;GB)
Extraction
An econometric analysis of exploration and extraction of oil on the U.K. continental shelf, 15:48142 (R;GB)
Hydraulic Transport
Effects of produced sand on short distance pipeline transportation of heavy oil in water emulsions: SRC [Saskatchewan Research Council] pipeloop test results: Final report, 15:48172 (R;CA)
Hydrogenation
The CANMET [Canada Centre for Mineral and Energy Technology] emulsion upgrading process, 15:48195 (RA;CA)
Maritime Transport
Potential issues associated with shipping oil and gas through the Labrador Sea and Strait of Belle Isle, 15:48170 (R;CA)
Response to recommendation No. 80, Beaufort Sea environmental assessment and review panel: Final report, 1984-89, 15:48171 (R;CA)
Market
World oil market projections, 1990-2005. Study No. 34, 15:48141 (R;CA)
Meetings
Challenges and innovations 1990. Seventh annual heavy oil and oil sands technical symposium, 15:48192 (R;CA)
Prices
World oil market projections, 1990-2005, 15:48139 (R;CA)
Recovery
Gulf of Mexico sales 131, 135, and 137: Central, Western, and Eastern planning areas: Final environmental impact statement: Volume 2, Sections IV.D. and IX, 15:48154 (R;US)
Reserves
Alberta's reserves of crude oil, oil sands, gas, natural gas liquids, and sulphur, 15:48131 (R;CA)
US oil and gas reserves by year of field discovery, 15:48125 (R;US)
Standards
Amendment to the best demonstrated available technology (BDAT) background document for wastes from the petroleum

refining industry K048, K049, K050, K051, K052. Final report, 15:48146 (R;US)
Final response to BDAT related comments document. K043-K052, K036, K037. Volume 1-O, 15:48147 (R;US)

Supply and Demand
Alberta oil and gas industry annual statistics, 1988, 15:48133 (R;CA)
Outlook for demand growth in Asian countries, 15:48698 (RA;CA)
World oil market projections, 1990-2005, 15:48139 (R;CA)

United Kingdom
An econometric analysis of exploration and extraction of oil on the U.K. continental shelf, 15:48142 (R;GB)

Water Pollution Control
Delegations of authority under the Federal Water Pollution Control Act (FWPCA) which are applicable to the Superfund program. Directive (Final), 15:48157 (R;US)

PETROLEUM COKE
See PETROLEUM PRODUCTS

PETROLEUM DEPOSITS
See also OIL FIELDS
Evaluation of unrecovered mobile oil in Texas, Oklahoma, and New Mexico, 15:48136 (BA;US)
Geologic interpretation of gravity anomalies, 15:48124 (R;US)
Geology of the Stoney Creek oil and gas field, and its implications regarding the tectonic evolution of the eastern Moncton subbasin, New Brunswick. Geoscience report No. 89-1, 15:48130 (R;CA)
Response to recommendation No. 80, Beaufort Sea environmental assessment and review panel: Final report, 1984-89, 15:48171 (R;CA)

PETROLEUM INDUSTRY
Environmental Studies Research Funds annual report, 1989, 15:48747 (R;CA)
Oil-spill preparedness in the upstream petroleum industry, 15:48152 (R;CA)

PETROLEUM PRODUCTS
See also GASOLINE
LIQUEFIED PETROLEUM GASES
LUBRICATING OILS
UNFINISHED OILS
An overview of hydrodesulfurization (HDS), hydrodenitrification (HDN), and hydrodemetalation (HDM) in petroleum chemistry, 15:48138 (BA;US)

PETROLEUM REFINERIES
Amendment to the best demonstrated available technology (BDAT) background document for wastes from the petroleum refining industry K048, K049, K050, K051, K052. Final report, 15:48146 (R;US)
Assessment of the organics containment plume at Ville-Mercier, Quebec, Canada, 15:49586 (RA;CA)
Catalytic hydrotreatment of refinery waste: Demonstration project: Final report, 15:48145 (R;LU)
Final response to BDAT related comments document. K043-K052, K036, K037. Volume 1-O, 15:48147 (R;US)

PETROLEUM RESIDUES
Exploratory coprocessing research: Quarterly report No. 7, March 1, 1990–May 31, 1990, 15:48077 (R;US)
Recent developments in donor solvent upgrading (DRB), 15:48198 (RA;CA)

PETT
See POSITRON COMPUTED TOMOGRAPHY

PETTEN HIGH FLUX REACTOR
See HFR REACTOR

PH VALUE
Determination of the acid level of weakly mineralized waters, 15:49634 (R;CA)

PHAEDRUS MIRROR DEVICES
Variable eigenmode excitation in the beach heating of two-ion-species mirror plasmas, 15:50120 (R;US)

PHAGES
See BACTERIOPHAGES

PHANTOMS
3-D phantom to simulate cerebral blood flow and metabolic images for PET, 15:49701 (J;US)
A high-resolution SPECT system based on a microchannel-plate imager, 15:49346 (J;US)
A phantom for quality control in mammography, 15:49677 (RA;GB)
Application of mathematical removal of positron range blurring in positron emission tomography, 15:49360 (J;US)
Measuring PET scanner sensitivity: Relating count rates to image signal-to-noise ratios using noise equivalent counts, 15:49350 (J;US)
Patient equivalent phantoms in chest radiography, 15:49674 (RA;GB)

PHASE STUDIES
High-pressure phase equilibria in hydrocarbon-water (brine) systems, 15:48491 (RA;US)

PHASEOLUS
Mild water stress effects on carbon-reduction-cycle intermediates, ribulose bisphosphate carboxylase activity, and spatial homogeneity of photosynthesis in intact leaves, 15:48465 (J;US)

PHENOL
Anaerobic fluid-bed treatment of coal conversion wastewater: Tenth quarterly technical progress report, November 15, 1988–February 15, 1988, 15:48093 (R;US)

PHENOLS
See also CRESOLS
PHENOL
Prediction of the environmental fate of pentachlorophenol as a function of pH using fugacity models, 15:49573 (R;CA)

PHENYLAMINE
See ANILINE

PHI4-FIELD THEORY
Quantum corrections to kink-type classical solution in one-dimensional phi 4 model, 15:49976 (RA;SU;In Russian)

PHONONS
Surface anharmonicity: Temperature dependence of phonon energies on Cu(110), 15:50068 (R;US)

PHOSPHATE GLASS
Raman spectra of molybdenum phosphate glasses and some crystalline analogues, 15:48946 (J;US)

PHOSPHORS
See also LIQUID SCINTILLATORS
PLASTIC SCINTILLATORS
A more rugged ZnS(Ag) alpha scintillation detector, 15:49564 (J;US)

PHOSPHORUS
Pollution load on the gulf of Finland in 1982-1984, 15:49636 (R;FI)

PHOTOCHEMISTRY
Light induced processes of MLCT [metal to ligand charge transfer] excited states attached to a soluble polymer, 15:49143 (BA;US)

PHOTOCHROMIC MATERIALS
Light induced processes of MLCT [metal to ligand charge transfer] excited states attached to a soluble polymer, 15:49143 (BA;US)

PHOTOELECTRON COUNTING
Experimental study of the single electron response of the DELPHI Barrel RICH MWPC's, 15:49287 (R;FR)

PHOTOGRAPHIC FILM DETECTORS
Photoemulsion vertex detector at the SKIF installation, 15:49304 (R;SU;In Russian)

PHOTOMAGNETOELECTRIC EFFECT
See MAGNETIC FIELDS

PHOTON COLLISIONS
The physics of electronic and atomic collisions, 15:49868 (B;US)

PHOTON DETECTION (GAMMA)
See GAMMA DETECTION

PHOTON DETECTION (X-RAY)
See X-RAY DETECTION

PHOTON TRANSPORT
Monte Carlo next-event estimates from thermal collisions, 15:50060 (R;US)

PHOTON-PROTON INTERACTIONS
Excited quark production at ep and γp colliders, 15:49933 (R;SU)

PHOTOVOLTAIC CELLS
Calibration of photovoltaic cells and modules used for terrestrial applications, 15:48457 (R;FR;In French)
Efficient photovoltaic devices for InP semiconductor/liquid junctions. Technical report, 15:48454 (R;US)
Field trial procedure to assess the behavior of photovoltaic modules under natural condition, 15:48458 (R;FR)
Resistance of solar modules to environment constraints, 15:48456 (R;FR;In French)
Solar energy photovoltaic conversion 1982-1985 research review, 15:48455 (R;FR;In French)
Structure of amorphous-silicon and germanium alloy films: Annual subcontract report, January 15, 1989–January 14, 1990, 15:48463 (R;US)

PHOTOVOLTAIC POWER PLANTS
Terrestrial nickel/hydrogen battery evaluation, 15:48468 (R;US)

PHOTOVOLTAIC POWER SUPPLIES
Diode laser satellite systems for beamed power transmission, 15:48467 (R;US)
Interchange of researchers on alternative energy of petroleum in EC countries, 15:48732 (R;JP;In Japanese)
Study of photovoltaic sites in the Alpes-de-Haute-Provence, 15:48466 (R;FR;In French)

PHYSICAL CHEMISTRY
Nuclear Technology Programs semiannual progress report, October 1987–March 1988, 15:48729 (R;US)

PHYSICS

EQUILIBRIUM PLASMA
HOT PLASMA
INHOMOGENEOUS PLASMA
LASER-PRODUCED PLASMA
Conditions for ion reflection in a large-amplitude magnetosonic wave, 15:50165 (R;JP)
Electromagnetic wave incoherent reflection by a plasma layer, 15:50153 (R;UA;In Russian)
Particle simulation of a two-dimensional electrostatic plasma, 15:50109 (R;IN)

PLASMA (QUARK)
See QUARK MATTER

PLASMA ACCELERATION
High-energy protons produced by a large-amplitude magnetosonic wave and associated gamma radiation through neutral pion decay, 15:49825 (R;JP)

PLASMA DIAGNOSTICS
Alpha Detection
Some problems of plasma diagnostics in an experimental thermonuclear reactor, 15:50145 (RA;CS;In Russian)
Atomic Beams
A 40 keV neutral lithium beam source for tokamak CASTOR, 15:49876 (RA;CS)
Data Acquisition Systems
Diagnostic system CAE T-15 and prospects of its development, 15:50136 (RA;CS;In Russian)
Data Processing
Methods of superchronous processing of signals in high-temperature plasma diagnostics, 15:50127 (R;SU;In Russian)
Doppler Broadening
Charge-exchange spectroscopy in the T-15 tokamak, 15:50141 (RA;CS;In Russian)
Emission Spectroscopy
Automated system of visible and ultraviolet spectroscopy for the T-15 tokamak, 15:50142 (RA;CS;In Russian)
Energy Levels
Satellite lines of neon-like resonance lines for 17<Z<48, 15:50110 (R;FR)
Fluorescence Spectroscopy
Diagnostics of impurity and neutral components of tokamak plasma by the resonance fluorescence method, 15:50130 (R;SU;In Russian)

Jippt-2 Device
Plasma diagnostics and atomic processes, 15:50162 (R;JP)
Langmuir Probe
A method for determination of the electron temperature from Langmuir probe data in a tokamak edge plasma, 15:50149 (RA;CS)
Investigation of edge plasma by means of Langmuir probes, 15:50148 (RA;CS;In Russian)
Neutron Spectrometers
Neutron spectrometers for the T-15 tokamak, 15:49302 (RA;CS;In Russian)
Plasma Scrape-Off Layer
Thomson scattering equipment for investigation of plasma filament scrape-off layer at the T-10 tokamak, 15:50126 (R;SU;In Russian)
Surface Barrier Detectors
Project of CFP plasma diagnostic system for the T-15 tokamak, 15:50144 (RA;CS;In Russian)
T-15 Tokamak
Technological start of T-15 tokamak. The start-up diagnostic complex, 15:50134 (RA;CS;In Russian)
Tftr Tokamak
Plasma diagnostics and atomic processes, 15:50162 (R;JP)
Thermonuclear Reactions
Diagnostics of a thermonuclear plasma, based on the use of nuclear reactions, 15:50146 (RA;CS;In Russian)
Thomson Scattering
Thomson scattering equipment for investigation of plasma filament scrape-off layer at the T-10 tokamak, 15:50126 (R;SU;In Russian)
Time-Of-Flight Method
A time-of-flight analyzer of low energy atoms (preliminary test on the CASTOR tokamak), 15:50143 (RA;CS)
Tokamak Devices
Methods of superchronous processing of signals in high-temperature plasma diagnostics, 15:50127 (R;SU;In Russian)
X-Ray Spectroscopy
Satellite lines of neon-like resonance lines for $17<Z<48$, 15:50110 (R;FR)
PLASMA FILAMENT
Equilibrium of plasma filament with inhomogeneous field along on axis and without of longitudinal current, 15:50129 (R;SU;In Russian)
PLASMA FOCUS DEVICES
Experimental study of the plasma-focus device as a charged-particle accelerator. Final report, October 1982-May 1985, 15:49223 (R;US)
PLASMA JETS
Gas jet magnetic compression dynamics, 15:50124 (R;SU;In Russian)
PLASMA OSCILLATIONS
See PLASMA WAVES
PLASMA SCRAPE-OFF LAYER
Effect of confinement of SoL plasma on core temperature profile, 15:50161 (R;JP)
PLASMA SIMULATION
Particle simulation of a two-dimensional electrostatic plasma, 15:50109 (R;IN)
PLASMA WAVES
Convergence of numerical schemes suitable for two dimensional nonlinear convection: application to the coupling of modes in a plasma, 15:50092 (R;FR;In French)
Parametric instabilities of electromagnetic waves in layer of plasma-molecular medium, 15:50152 (R;UA;In Russian)
PLASMASPHERE
Remote sensing of the thermosphere, plasmasphere, and exosphere, 15:49361 (J;US)
PLASMIDS
Isolation and properties of plasmids from Deinococcus radiodurans Sark, 15:49714 (R;JP)
PLASTIC SCINTILLATORS
A large-area, scintillation telescope for heavy ions, 15:49328 (J;US)
Studies in the radiation resistance of plastic scintillators: Review and prospects, 15:49373 (J;US)
PLATING SOLUTIONS
See PROCESS SOLUTIONS
PLATINUM
Corrosion and arc erosion in MHD channels: Quarterly progress report, January–March 1990, 15:48757 (R;US)
Structure of Au and Pt films on Pd(110): Deposition temperature and coverage dependent (1 times 2) and (1 times 3) reconstructions, 15:48878 (R;US)
PLATINUM ISOTOPES
Shape isomers at no spin, 15:50013 (R;FR)
PLESIOTHERAPY
See RADIOTHERAPY
PLUGGING AGENTS
Foams for effective gas blockage in the presence of crude oil, 15:48134 (BA;US)
PLUTONIUM
New method permits the detection of alpha emitters at a distance, 15:49563 (J;US)
Robotic requirements for plutonium handling automation, 15:49176 (J;US)
The chemistry of plutonium(VI) in aqueous carbonate solutions, 15:49033 (R;US)
PLUTONIUM 236
Detection of the radioactive decay of ^{236}Pu involving the emission of ^{28}Mg nuclei, 15:50017 (RA;SU;In Russian)
PLUTONIUM 238
Collective bands in actinide nuclei and rare-earth elements in the SU(3) scheme, 15:50025 (R;SU;In Russian)
PLUTONIUM 239
Reprocessing input data validation, 15:48388 (R;US)
US Mussel Watch Program: Transuranic element data from Woods Hole Oceanographic Institution 1976-1983. Technical report, 15:49610 (R;US)
X-ray spectrometry in vivo a Si(Li)-NaI(T1) detector, 15:49352 (J;US)
PLUTONIUM 240
Collective bands in actinide nuclei and rare-earth elements in the SU(3) scheme, 15:50025 (R;SU;In Russian)
US Mussel Watch Program: Transuranic element data from Woods Hole Oceanographic Institution 1976-1983. Technical report, 15:49610 (R;US)
PLUTONIUM COMPLEXES
Determination of non-metallic elements in actinide complexes by oxygen flask combustion (OFC): chlorine and fluorine, 15:48989 (R;IN)
PLUTONIUM COMPOUNDS
See also PLUTONIUM NITRIDES
Simulation of alpha continuous air monitor alarm response in the presence of plutonium, 15:49557 (R;US)
PLUTONIUM DIOXIDE
Thermophysical and thermochemical properties of fast reactor materials, 15:48872 (R;FR)
PLUTONIUM IONS
Optical study and analysis of Pu^{4+} in single crystals of $ZrSiO_4$, 15:49020 (RA;US)
PLUTONIUM NITRIDES
Design, construction and performance tests of atomic emission spectrograph with DCA and ICP excitation systems for plutonium bearing fuels, 15:48997 (R;JP;In Japanese)

Computerized Simulation

Simulation modeling of subsurface development, 15:48324 (BA;US)

Containment

Simulation of radionuclide retardation at Yucca Mountain using a stochastic mineralogical/geochemical model, 15:48308 (BA;US)
Status of integrated performance assessment of the waste packages and engineering barrier system, 15:48316 (BA;US)

Design

Preclosure safety analysis for a prospective Yucca Mountain conceptual design repository, 15:48317 (BA;US)
Preliminary conceptual design description of the proposed DOE store-only monitored retrievable storage (MRS) facility, 15:48357 (BA;US)
Vitrification of defense high level radioactive waste at Savannah River and Hanford, 15:48325 (BA;US)

Economic Impact

Hedonic price theory: Concept and applications, 15:48344 (BA;US)

Emission

Natural radionuclides in groundwater from J-13 well at the Nevada test site, 15:48310 (BA;US)
One-dimensional radionuclide transport under time-varying conditions, 15:48305 (BA;US)
Simulation on reactive chemical transport in varying thermal field with reaction-flow coupling, 15:48306 (BA;US)

Feasibility Studies

Defining the need for and functions of the monitored retrievable storage (MRS) facility, 15:48327 (BA;US)

Geophysics

Diffusion barrier transport properties of unsaturated paintbrush tuff rubble backfill, 15:48314 (BA;US)

Hazards

Basaltic volcanic episodes of the Yucca Mountain region, 15:48296 (BA;US)

Hydrology

Hydrologic characterization of faults and other potentially conductive geologic features in the unsaturated zone, 15:48348 (BA;US)
Multi-dimensional modeling of unsaturated flow in the vicinity of exploration shafts and fault zones at Yucca Mountain, Nevada, 15:48347 (BA;US)

Licensing

A proposed methodology for validating performance assessment models for the DOE Office of Civilian Radioactive Waste Management Program, 15:48318 (BA;US)

Performance

Overview of the U.S. Department of Energy's PACE-90 geologic repository performance assessment exercise activity, 15:48355 (BA;US)

Planning

High-level radwaste plans in nine countries, 15:48371 (J;US)

Program Management

On-site representation and oversight: A special role for the state of the Nevada and Nye County in the civilian radioactive waste management program, 15:48312 (BA;US)

Public Policy

Public communication and participation activities in siting controversial facilities in the United States and Western Europe: An examination of lessons learned, 15:48311 (BA;US)
Two citizen task forces and the challenge of the evolving nuclear waste siting process, 15:48341 (BA;US)

Quality Assurance

The use of performance assessments in Yucca Mountain repository waste package design activities, 15:48354 (BA;US)

Radiation Hazards

Risk perspective on potential releases of ^{14}C from the geologic repository at Yucca Mountain, 15:48384 (BA;US)

Radiation Monitoring

Environmental impact assessment for a radioactive waste facility: A case study, 15:48259 (R;US)

Risk Assessment

Initiating event identification and screening for nuclear waste repository preclosure risk assessment, 15:48378 (BA;US)

Rock Mechanics

Rock mechanics aspects of the ESF design, 15:48301 (BA;US)

Safeguards

International safeguards relevant to geologic disposal of high-level wastes and spent fuels, 15:48302 (BA;US)

Safety Engineering

Ventilation design for the Exploratory Shaft Facility Yucca Mountain Project, 15:48376 (BA;US)

Site Characterization

An investigation of the mechanical and hydrologic behavior of tuff fractures under saturated conditions, 15:48337 (BA;US)
Application of geophysical methods for fracture characterization, 15:48331 (BA;US)
Approach to developing a ground-motion design basis for facilities important to safety at Yucca Mountain, 15:48307 (BA;US)
Building of a conceptual model at the UE25-c hole complex, 15:48339 (BA;US)
Combined analytical/numerical approaches to solving fluid flow problems in the unsaturated zone at Yucca Mountain, 15:48338 (BA;US)
Concepts in prototype testing for in situ geomechanical investigations at Yucca Mountain, 15:48333 (BA;US)
Diffusion coefficients and hydraulic conductivity in unsaturated Hanford soils and sediments, 15:48336 (BA;US)
Linkage between site characterization program and performance and design data needs, 15:48359 (BA;US)
Modeling of coupled heat-mass stress effects in geologic media, 15:48342 (BA;US)
Prelimary methodology for design of stable drifts for the Yucca Mountain Project, 15:48297 (BA;US)
Prototype testing for the Yucca Mountain project, 15:48335 (BA;US)
Role of underground testing to determine suitability of Yucca Mountain as a potential repository site, 15:48299 (BA;US)
Seismic characterization of fracture properties, 15:48343 (BA;US)
Synthesis of studies for the potential of fault rupture at the proposed surface facilities, Yucca Mountain, Nevada, 15:48309 (BA;US)
The application of vertical seismic profiling and cross-hole tomographic imaging for fracture characterization at Yucca Mountain, 15:48330 (BA;US)
The international Stripa project: Technology transfer from cooperation in scientific and technological research on nuclear waste disposal, 15:48334 (BA;US)

Social Impact
Current social systems issues in the U.S. high level waste management program, 15:48322 (BA;US)
Socio-Economic Factors
Managing local socioeconomic impacts through project management policies concerning subsidized transportation, site access, and on-site housing, 15:48313 (BA;US)
Source Terms
A gas-flow source term from a nuclear waste container in an unsaturated medium, 15:48380 (BA;US)
Start-Up
DOE-EM/producers strategy for wasteform and process startup acceptance, 15:48326 (BA;US)
Thermodynamics
Evaluation of near-field thermal environment conditions for a spent fuel repository in tuff, 15:48320 (BA;US)
Waste Water
Computed distributions of residual shaft drilling and drift construction water in the exploratory facilities at Yucca Mountain, Nevada, 15:48349 (BA;US)

Parallelization of a radiation transport simulation code on the BBN TC2000™ parallel computer, 15:49285 (R;US)
SSC detector R&D at Brookhaven National Laboratory (BNL): April 1990 Status report, 15:49283 (R;US)
Spatial resolution of electromagnetic liquid krypton calorimeter: Monte-Carlo simulation, 15:49300 (R;SU;In Russian)
Technique for investigation of hadron groups in ionization calorimeter, 15:49288 (R;SU;In Russian)
[An experiment at GSI/SIS to study the 4π detector system]: Foreign trip report, June 9–September 5, 1990, 15:49316 (R;US)

SI SEMICONDUCTOR DETECTORS
A high rate FASTBUS silicon strip readout system, 15:49336 (J;US)
A high speed, high gain preamplifier system for silicon strip detectors, 15:49340 (J;US)
A high speed, low noise ASIC preamplifier for silicon strip detectors, 15:49343 (J;US)
A monolithically integrated detector-preamplifier on high-resistivity silicon, 15:49342 (J;US)
Assessment of TFT amplifiers for a-Si:H PIXEL particle detectors, 15:49356 (J;US)
Design and prototyping of the front end readout system for the CDF silicon vertex detector, 15:49273 (J;US)
Improved charge collection of the buried p-i-n- a-Si:H radiation, 15:49324 (J;US)
Radiation effects on the SVX silicon strip readout chip, 15:49371 (J;US)
Silicon microstrip electronics operating with 20 nsec FWHM signals, 15:49358 (J;US)
Study on the effect of main performance of Si-surface-barrier detectors of different area on the noise and timing parameters of a charged particle spectrometer, 15:49294 (R;SU;In Russian)

SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES

SILICA
Evolution of surface area during the controlled growth of silica spheres, 15:48973 (R;US)

SILICA GEL
Study of the silica aerogel densifications by SAXS and BET, 15:48909 (R;BR;In Portuguese)

SILICON
A theoretical investigation on structural, vibrational, and electronic properties of amorphous silicon, 15:48879 (R;US)
Application of ion beam sputtering for diffusion study in solids, 15:50065 (R;GB)
Currents caused by radiation-induced defects in p-n junctions, 15:50082 (RA;SU;In Russian)
Damped-core quantum Monte Carlo: An effective treatment for large-z systems, 15:50233 (RA;US)
Hydrogen passivation of radiation-induced defects in silicon, 15:50081 (RA;SU;In Russian)
Investigation of radiation-induced defects in p-Si by deep level nonstationary capacitance spectroscopy method, 15:50083 (RA;SU;In Russian)
Residual stress at fluid interfaces, 15:48870 (R;US)
SERI workshop on the role of point defects/defect complexes in silicon device fabrication: Book of abstracts, 15:48461 (R;US)

SILICON ALLOYS
Structure of amorphous-silicon and germanium alloy films: Annual subcontract report, January 15, 1989–January 14, 1990, 15:48463 (R;US)

SILICON CARBIDES
Characterization of short fatigue cracks at notches in SiC particulate aluminum composite, 15:48957 (R;US)
Corrosion protection of metal-matrix composites. Final report, October 1986-April 1990, 15:48855 (R;US)
Effect of hydrogen-water atmospheres on corrosion and flexural strength of sintered α-silicon carbide, 15:48944 (J;US)
Effect of interfacial characteristics on the mechanical performance of ceramic-ceramic composites. Final report, July 1986-December 1989, 15:48906 (R;US)
Fracture resistance behavior of silicon carbide whisker-reinforced alumina composites with different porosities, 15:48942 (J;US)
Investigation of thermo-mechanical effects in silicon carbide whisker/Al alloy composites. Final report, 1 March 1985-31 August 1989, 15:48902 (R;US)
Metal-matrix composites - a promising alternative to conventional alloys, 15:48908 (R;DE)
Short-fibre and particulate-reinforced metal-matrix composites, 15:48907 (R;US)
The chemical state of iron ions implanted into silicon carbide, 15:48950 (R;US)

SILICON NITRIDES
Bonding mechanisms in silicon nitride brazing, 15:48943 (J;US)
Effect of interfacial characteristics on the mechanical performance of ceramic-ceramic composites. Final report, July 1986-December 1989, 15:48906 (R;US)

SILICON OXIDES
See also SILICA
Optical study and analysis of Pu^{4+} in single crystals of $ZrSiO_4$, 15:49020 (RA;US)
Residual stress at fluid interfaces, 15:48870 (R;US)

SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS

SILICON SOLAR CELLS
Research on high-efficiency, large area amorphous silicon based solar cells: Final subcontract report, February 1, 1989–February 28, 1990, 15:48462 (R;US)
Research on high-efficiency, multiple-gap, multi-junction amorphous silicon-based alloy thin-film solar cells: Final subcontract report, March 1, 1987–February 28, 1990, 15:48464 (R;US)

SERI workshop on the role of point defects/defect complexes in silicon device fabrication: Book of abstracts, 15:48461 (R;US)

SILICONES
Thin-film composite materials, Phase 2. Final report, 1 April-31 December 1986, 15:48948 (R;US)

SILVER
Unenhanced surface Raman spectroscopy of nitrogen physisorbed on Ag(111), 15:49076 (RA;US)
Work in progress, 15:49078 (RA;US)
Work in progress, 15:49038 (RA;US)
$YBa_2Cu_3O_x$ composites with improved toughness and strength, 15:48916 (R;US)

SILVER 109
SDIO/1st ultrashort wavelength laser - novel experimental schemes for observing the Moessbauer Effect in long-lived nuclear levels and nuclear coherent states. Final technical report for period ending 26 May 1990, 15:49200 (R;US)

SILVER FLUORIDES
A general method for the synthesis of polymeric binary fluorides exemplified by AgF_3, NiF_4, RuF_4, and OsF_4, 15:49099 (RA;US)

SILVER NITRATES
Fabrication of composite high temperature superconductor wires from $Ag/YBa_2Cu_3O_x$ power produced by $AgNO_3$ decomposition, 15:48901 (R;US)

SIMS
See ION MICROPROBE ANALYSIS
MASS SPECTROSCOPY

SINE GENERATORS
See FUNCTION GENERATORS

SINGLE PHOTON EMISSION COMPUTED TOMOGRAPHY
A high-resolution SPECT system based on a microchannelplate imager, 15:49346 (J;US)
A new generation of SPECT and PET systems based on position sensitive photomultipliers, 15:49363 (J;US)
Constrained least squares filtering in high resolution PET and SPECT imaging, 15:49349 (J;US)
Nuclear medicine and quantitative imaging research (instrumentation and quantitative methods of evaluation): Progress report, January 15–September 1, 1990, 15:49687 (R;US)
Three-dimensional imaging utilizing energy discrimination, 15:49703 (J;US)

SINTERING
Co-researches with researchers of alternative energy of petroleum in EC countries, 15:48730 (R;JP;In Japanese)

SITE CHARACTERIZATION
Nonradioactive dangerous waste landfill closure/postclosure plan, 15:48263 (R;US)

SITE REHABILITATION
See REMEDIAL ACTION

SITE SELECTION
Electrical generating station proposal: Complete verbatim transcript, 15:48515 (R;CA)

SITES (REACTOR)
See REACTOR SITES

SKIN
Dermal penetration and systemic distribution of ^{14}C-labeled vitamin E human skin grafted athymic nude mice, 15:49656 (R;US)
Investigation of the permeation of radiocontrast agent into the experimentally irritated stratum corneum, 15:49692 (R;DE;In German)

SLC
See STANFORD LINEAR COLLIDER

SLC DETECTORS
Design of a wire imaging synchrotron radiation detector, 15:49322 (J;US)

SLIGHTLY ENRICHED URANIUM
Some economic aspects of the low enriched uranium production: Proceedings of a technical committee meeting held in Vienna, 11-14 October 1988, 15:48242 (R;XA)

SLUGS (FUEL)
See FUEL RODS

SMALL-SCALE HYDROELECTRIC POWER PLANTS
Operation of an isolated mini-hydro plant in northern Quebec, 15:48448 (RA;CA)
Small hydro-electric power stations, 15:48446 (R;FR;In FR, EN)

SMES
See SUPERCONDUCTING MAGNETIC ENERGY STORAGE

SNR REACTOR
Reactor transients tests for SNR fuel elements in HFR reactor, 15:48635 (RA;FR;In German)

SNR-1 REACTOR
See SNR REACTOR

SNR-300 REACTOR
See SNR REACTOR

SOCIAL SERVICES
Artificial intelligence for subject interviewing, 15:48699 (R;US)

SOCIO-ECONOMIC ASPECTS
See SOCIO-ECONOMIC FACTORS

SOCIO-ECONOMIC FACTORS
Ecological characterization atlas of coastal Alabama: Map narrative, 15:49571 (R;US)

SODIUM
Improved Fischer-Tropsch Synthesis catalysts for indirect coal liquefaction: Quarterly technical progress report No. 8, 1 July–30 September 1987, 15:48075 (R;US)
Polarization effects in reactive scattering of Na atoms in the 4D level, 15:49885 (RA;US)
SWAAM-code development and verification and application to steam generator designs, 15:48581 (R;US)
The reactions of ground- and excited-state sodium atoms with hydrogen halide molecules, 15:49138 (RA;US)
Thermophysical and thermochemical properties of fast reactor materials, 15:48872 (R;FR)

SODIUM CHLORIDES
Mechanisms of surface enrichment and adhesion of coal combustion particulates: Eighth and ninth quarterly reports, June 16, 1988–December 15, 1988, 15:48113 (R;US)
Near-critical $NaCl-H_2O$: An equation of state and discussion of anomalous properties, 15:49041 (RA;US)

SODIUM IODIDE DETECTORS
See NAI DETECTORS

SODIUM-SULFUR BATTERIES
Chemical stability of sodium beta″-alumina electrolyte in sulfur/sodium polysulfide melts, 15:49111 (RA;US)
Sodium/beta″-alumina/organosulfur batteries operating at intermediate temperatures, 15:49112 (RA;US)
Transference number calculations for sodium polysulfides, 15:49119 (RA;US)

SOFC
See SOLID ELECTROLYTE FUEL CELLS

SOIL MECHANICS
Materials: From theory to practice: Proceedings, 15:49744 (R;CA)

SOILING
See SURFACE CONTAMINATION

SOILS
Acidification
Current status of forest decline and its research activities in Europe, 15:48702 (R;JP;In Japanese)

Combustion
Reuse of incinerated soil residues in land reclamation, 15:49567 (R;US)

Contamination
Background document for Third Third wastes to support 40 CFR part 268 land-disposal restrictions. Final rule. Third Third waste volumes, characteristics, and required and available treatment capacity. Volume 1. Executive summary. Chapter 1 and Chapter 2, 15:49578 (R;US)
Delegation of remedy selection to regions. Directive (Final), 15:49580 (R;US)
Final response to BDAT related comments document. K071 and K106: Mercury cell process wastes K086: Residues from ink production wastes containing cyanide. Volume 1-L, 15:49608 (R;US)
Final response to BDAT related comments document: General BDAT issues. Volume 1-A-3, 15:49517 (R;US)

Health assessment for Abex Corporation, Portsmouth, Elizabeth County, Virginia, Region 3. CERCLIS No. VAD980551683. Preliminary report, 15:49582 (R;US)
Health assessment for Elizabethtown Landfill, Elizabethtown, Lancaster County, Pennsylvania, Region 3. CERCLIS No. PAD980539712. Final report, 15:49614 (R;US)
Health assessment for Ewan Property, Shamong Township, Burlington County, New Jersey, Region 2. CERCLIS No. NJD980761365. Final report, 15:49626 (R;US)
Health assessment for Fletcher's Paint Works and Storage Facility Hazardous Waste Material, Milford, Hillsborough County, New Hampshire, Region 1. CERCLIS No. NHD981067614. Preliminary report, 15:49615 (R;US)
Health assessment for GBF, Inc., Dump, Antioch, Contra Costa County, California, Region 9. CERCLIS No. CAD980498562. Preliminary report, 15:49620 (R;US)
Health assessment for Gautier Oil Co., Inc., Gautier, Mississippi, Region 4. CERCLIS No.MSD098596489. Preliminary report, 15:49534 (R;US)
Health assessment for Imperial Oil Co., Inc./Champion Chemicals, Marlboro Township, Monmouth County, New Jersey, Region 2. CERCLIS No. NJD980654099. Final report, 15:49624 (R;US)
Health assessment for Intersil, Inc./Siemens Components, Cupertino, Santa Clara County, California, Region 9. CERCLIS No. CAD041472341. Preliminary report, 15:49627 (R;US)
Health assessment for Kent County Landfill (Houston), Houston, Kent County, Delaware, Region 3. CERCLIS No. DED980705727. Preliminary report, 15:49535 (R;US)
Health assessment for Landfill and Development Company, Mount Holly, New Jersey, Region 2. CERCLIS No. NJD048044325. Final report, 15:49611 (R;US)
Health assessment for Radiation Technology, Inc., Rockaway, Morris County, New Jersey, Region 2. CERCLIS No. NJD047684451. Final report, 15:49625 (R;US)
Health assessment for South Municipal Water Supply Well, Hillsborough County, Peterborough, Cheshire County, New Hampshire, Region 1. CERCLIS No. NHD980671069. Final report, 15:49616 (R;US)
Health assessment for Tex Tin Corporation, National Priorities List Site, Texas City, Texas, Region 6. CERCLIS No. TXD062113329. Preliminary report, 15:49617 (R;US)
Health assessment for Tri-City Industrial Disposal Site, Brooks, Kentucky, Region 4. CERCLIS No. KYD981028350. Preliminary report, 15:49619 (R;US)
Health assessment for Union Carbide Disposal/Red Oak Landfill Site, Red Oak, Iowa, Region 7. CERCLIS No. IAD980643509. Preliminary report, 15:49539 (R;US)
Redelegation of authority under CERCLA and SARA. Directive (Final), 15:49581 (R;US)
Superfund Record of Decision (EPA Region 2): Roebling Steel, NJ. (First remedial action), March 1990, 15:49631 (R;US)
Superfund Record of Decision (EPA Region 3): C and R Battery, VA. (First remedial action), March 1990. Final report, 15:49629 (R;US)
Superfund Record of Decision (EPA Region 3): Westline, PA. (First remedial action) (amendment), March 1990, 15:49630 (R;US)

Decontamination
In-situ biorestoration of a subsoil contaminated with gasoline. Interim report, 15:48156 (R;NL)

Erosion
Soil erosion rates from mixed soil and gravel surfaces in a wind tunnel, 15:49584 (R;US)

Excavation
Air/Superfund national technical guidance study series. Development of example procedures for evaluating the air impacts of soil excavation associated with Superfund remedial actions. Final report, 15:49544 (R;US)

Field Tests
Field evaluation of grillage foundation uplift capacity: Final report, 15:48674 (R;US)

Hydraulic Conductivity
Diffusion coefficients and hydraulic conductivity in unsaturated Hanford soils and sediments, 15:48336 (BA;US)
Predicted drainage at a semiarid site: Sensitivity to hydraulic property description and vapor flow, 15:48287 (R;US)

Information
Ecological characterization atlas of coastal Alabama: Map narrative, 15:49571 (R;US)

Radionuclide Migration
Evaluation of water flow velocity, dispersion length and retardation factor in radionuclide migration test using undisturbed samples of aerated sandy soil layer, 15:49572 (R;JP;In Japanese)
Geochemical modelling of the Broubster natural analogue site Caithness, Scotland, 15:48275 (R;FR)
One-dimensional radionuclide transport under time-varying conditions, 15:48305 (BA;US)
Simulation on reactive chemical transport in varying thermal field with reaction-flow coupling, 15:48306 (BA;US)

Sampling
Performance evaluation of a groundwater and soil gas remedial action, 15:49566 (R;US)
Results of the radiological survey at the Granite City Steel faciltiy, Granite City, Illinois, 15:49575 (R;US)

X-Ray Spectroscopy
Synchrotron x-ray sources and new opportunities in the soil and environmental sciences: Workshop report, 15:49565 (R;US)

SOLAR CELL RECEIVERS
See SOLAR RECEIVERS

SOLAR COLLECTORS
Development of the Fresnel-lens-type solar collector, 15:48474 (R;JP)

SOLAR COOLING SYSTEMS
Colorado State University program for developing, testing, evaluating and optimizing solar heating and cooling systems: Project status report for the months of July and August 1990, 15:48472 (R;US)

SOLAR CORONA
Numerical study of compressible magnetoconvection with an open transitional boundary, 15:49748 (R;US)

SOLAR HEATING SYSTEMS
See also PASSIVE SOLAR HEATING SYSTEMS
Colorado State University program for developing, testing, evaluating and optimizing solar heating and cooling systems: Project status report for the months of July and August 1990, 15:48472 (R;US)

SOLAR NEUTRINOS
Status of solar neutrino observations and prospects for future experiments, 15:49845 (BA;US)
Strength function of xenon 127 and cross section of $^{127}I(\nu_e, e^-)^{127}Xe$ reaction, 15:50028 (R;SU;In Russian)

SOLAR RECEIVERS
Bench-scale testing of a heat-pipe receiver for solar thermal electric applications, 15:48470 (R;US)

SOLAR SEA POWER PLANTS
See OCEAN THERMAL POWER PLANTS

SOLAR SYSTEM
Infrared spectroscopy in astronomy: Proceedings of the 22 Eslab Symposium, 15:49750 (R;FR)

SOLAR THERMAL RECEIVERS
See SOLAR RECEIVERS

SOLAR WATER HEATERS
Colorado State University program for developing, testing, evaluating and optimizing solar heating and cooling systems: Project status report for the months of July and August 1990, 15:48472 (R;US)

SOLAR WIND
Development of a comprehensive magnetohydrodynamic model of solar-terrestrial interaction. Final report, 1 March 1986-30 September 1988, 15:49854 (R;US)

SOLDERED JOINTS
Solderability of environmentally exposed Sn-plated surfaces, 15:48897 (R;US)
Thermal stresses in layered electrical assemblies bonded with solder, 15:49218 (R;US)

SOLENOIDS
Characterization of field errors of layer wound short solenoids, 15:49266 (R;US)
SOLID CLUSTERS
Chemical identification of icosahedral structure for cobalt and nickel clusters, 15:48865 (R;US)
SOLID ELECTROLYTE FUEL CELLS
Lightweight solid-polymer electrolyte fuel cell with stack power density of 3 kW/lb (7kW/kg), 15:48759 (R;US)
SOLID ELECTROLYTES
Electrochemical properties of solid electrolytes, 15:49110 (RA;US)
Work in progress, 15:49114 (RA;US)
SOLID SCINTILLATION DETECTORS
See also BGO DETECTORS
NAI DETECTORS
A more rugged ZnS(Ag) alpha scintillation detector, 15:49564 (J;US)
High speed imaging with a tapped solid state sensor, 15:49333 (J;US)
Readout techniques and radiation damage of undoped cesium iodide, 15:48940 (J;US)
SOLID SOLUTIONS
Fundamental studies of bond breaking and forming on ultrafast timescales, 15:49036 (RA;US)
SOLID STATE PHYSICS
Photoelectron spectroscopy, 15:49130 (RA;US)
Proceedings of the seminar of young scientists HEPI AN Kaz SSR. Part 2: 2. Solid state physics and mass transfer simulation, 15:50080 (R;SU;In Russian)
SOLID WASTES
Assessment of municipal solid waste for energy production in the western United States, 15:48833 (R;US)
Hazardous waste characterization of solid wastes generated from clean coal technologies, 15:48091 (R;US)
The stabilization and utilization of coal solid wastes, 15:48095 (R;US)
SOLIDS FLOW
Determination of flow-regime boundaries for cohesive particles: Quarterly report, December 20, 1989–March 20, 1990, 15:48211 (R;US)
Determination of flow-regime boundaries for cohesive particles: Quarterly report, September 20–December 19, 1989, 15:48210 (R;US)
SOLUTIONS

THERMOPLASTICS
Potential for advanced thermoplastic composites in space systems, 15:49405 (R;US)

THERMOSPHERE
Neutral and ion composition changes in the F Region over Millstone Hill during the equinox transition study, 15:49856 (R;US)
Remote sensing of the thermosphere, plasmasphere, and exosphere, 15:49361 (J;US)
Thermosphere-ionosphere coupling: An experiment in interactive modeling, 15:49850 (R;US)

THIN FILMS
Determination of hydrogen (deuterium) density profiles in thin metal films and multilayers by neutron reflection, 15:48857 (R;US)
Indentation testing of thin films and hard materials, 15:48912 (R;US)
Low temperature organometallic chemical vapor deposition (OMCVD) of rhodium and iridium thin films, 15:48938 (BA;US)
Magnetic properties of ultrathin epitaxial films of iron, 15:48861 (R;US)
Theoretical calculations of the nonlinear dielectric function of inhomogeneous thin films, 15:48972 (R;US)

THIO COMPOUNDS
See ORGANIC SULFUR COMPOUNDS

THIOALCOHOLS
See THIOLS

THIOETHERS
See SULFIDES

THIOLS
Preparation of potential radioprotective agents derived from aminothiols. Annual report, 16 July 1985-15 July 1986, 15:49706 (R;US)

THIRRING MODEL
Gauge structure, anomalies and mass generation in a three dimensional thirring model, 15:49965 (R;BR)

THORIUM 230
Results of the radiological survey at the Granite City Steel faciltiy, Granite City, Illinois, 15:49575 (R;US)

THORIUM 231
Hyperdeformed pear-shaped nuclei, 15:50015 (R;FR)

THORIUM 232
Collective bands in actinide nuclei and rare-earth elements in the SU(3) scheme, 15:50025 (R;SU;In Russian)

Results of the radiological survey at the Granite City Steel facility, Granite City, Illinois, 15:49575 (R;US)

THORIUM 233
Hyperdeformed pear-shaped nuclei, 15:50015 (R;FR)

THORIUM BROMIDES
Analysis of the $5f^1 \rightarrow 6d^1$ transitions in PaX_6^{2-} (X = Cl, Br) and $Pa^{4+}/ThBr_4$, 15:49019 (RA;US)

THORIUM HYDRIDES
X-ray photoelectron studies of thorium oxide and thorium oxide hydrate, 15:48939 (BA;US)

THORIUM OXIDES
X-ray photoelectron studies of thorium oxide and thorium oxide hydrate, 15:48939 (BA;US)

THORON
See RADON 220

THREE-BODY PROBLEM
Some dynamical properties of the linear three-particle chain, 15:50102 (R;UA;In Russian)

THULIUM COMPLEXES
On the stability and bonding in bis(η-arene)lanthanide complexes, 15:49063 (RA;US)

TIME-OF-DAY PRICING
See TIME-OF-USE PRICING

TIME-OF-FLIGHT SPECTROMETERS
A fast large-area position-sensitive time-of-flight neutron detection system, 15:49320 (J;US)
A large-area, scintillation telescope for heavy ions, 15:49328 (J;US)

TIME-OF-SEASON PRICING
See TIME-OF-USE PRICING

TIME-OF-USE PRICING
Survey of utility real-time pricing programs in the U.S, 15:48683 (R;JP;In Japanese)

TIME-TO-AMPLITUDE CONVERTERS
Information plates TP, δT and T2A for the KLYuKVA data collection system, 15:49207 (R;SU;In Russian)

TIN
Solderability of environmentally exposed Sn-plated surfaces, 15:48897 (R;US)

TIN 110
Gamma ray from highly excited ^{190}Hg and ^{110}Sn, 15:50014 (RA;JP;In Japanese)

TITANATES
Assessment of modular IGCC plants based on entrained flow coal gasification supplemental studies, 15:48489 (R;US)
Dielectric properties of fluxed barium titanate ceramics with zirconia additions, 15:48945 (J;US)

TITANIUM
[Defects in close-packed metals and alloys]: Foreign trip report, August 9, 1990–August 22, 1990, 15:48896 (R;US)

Reactor reliability research in Hungary in 1988, 15:48563 (RA;XA)
Safety of the advanced WWER-1000 in condition of failure of the emergency protection system, 15:48554 (RA;XA)
Thermohydraulic analysis for supporting PSA of SB LOCA in WWER-440, 15:48551 (RA;XA)

X

X RADIATION
Performance studies of a multiwire chamber, with 1 mm anode wire spacing, to be used for 2-D position-sensitive detection of x-rays, 15:49326 (J;US)

X-2830 RESONANCES
See MESONS

X-RAY DETECTION
The HgI_2 energy dispersive x-ray array detectors and minaturized processing electronics project, 15:49325 (J;US)

X-RAY DIFFRACTOMETERS
Proposal of a crossed Bonse-Hart type camera at E.S.R.F. for very high resolution X-Ray diffraction and very low angle scattering, 15:49284 (R;FR;In French)

X-RAY EQUIPMENT
See also X-RAY SOURCES
X-RAY TUBES

Biomedical Radiography
A protocol for the commissioning and routine testing of mammographic X-ray systems, 15:49675 (RA;GB)
An electronic instrument for high-voltage measurements of an X-ray unit for mammography, 15:49678 (RA;GB)
Assessment of a Shimadzu/medical X-ray supplies basic radiographic installation, 15:49694 (R;GB)
Assessment of a Siemens basic radiological installation, 15:49695 (R;GB)
Assessment of the Hitachi Sirius 125 B mobile X-ray Unit at three hospitals, 15:49696 (R;GB)
Field size and centring for conventional X-ray equipment, 15:49670 (RA;GB)
Mandatory quality assurance programmes for diagnostic radiology facilities in Ontario, Canada: Minimum requirements and limiting values, 15:49664 (RA;GB)
Procuring, maintaining and using equipment: the key issues in controlling exposure to patients, 15:49661 (RA;GB)
Proposed limiting values for performance criteria in acceptance testing of diagnostic X-ray equipment in the Federal Republic of Germany, 15:49662 (RA;GB)
Quality assurance and the World Health Organization initiative of 'Health for All' (Diagnostic radiology.), 15:49666 (RA;GB)
Quality control of dental X-ray units, 15:49679 (RA;GB)
Report on the use of the Palomex Vision One (Alpha-III) mammographic unit for breast cancer screening, 15:49697 (R;GB)
Report on the use of the Senographe 600TS (SENIXHF) mammographic unit for breast cancer screening, 15:49698 (R;GB)
Screening with mammography - what quality is required and how is it checked?, 15:49676 (RA;GB)
The Northern Regional Programme for the acceptance testing of X-ray equipment, 15:49663 (RA;GB)

Comparative Evaluations
Assessment of the Hitachi Sirius 125 B mobile X-ray Unit at three hospitals, 15:49696 (R;GB)

Dentistry
Quality control of dental X-ray units, 15:49679 (RA;GB)

Evaluation
Assessment of a Shimadzu/medical X-ray supplies basic radiographic installation, 15:49694 (R;GB)
Assessment of a Siemens basic radiological installation, 15:49695 (R;GB)
Report on the use of the Palomex Vision One (Alpha-III) mammographic unit for breast cancer screening, 15:49697 (R;GB)
Report on the use of the Senographe 600TS (SENIXHF) mammographic unit for breast cancer screening, 15:49698 (R;GB)

Fluoroscopy
Image field size and beam collimation in fluoroscopic equipment, 15:49669 (RA;GB)

Mammary Glands
A protocol for the commissioning and routine testing of mammographic X-ray systems, 15:49675 (RA;GB)
An electronic instrument for high-voltage measurements of an X-ray unit for mammography, 15:49678 (RA;GB)
Report on the use of the Palomex Vision One (Alpha-III) mammographic unit for breast cancer screening, 15:49697 (R;GB)
Report on the use of the Senographe 600TS (SENIXHF) mammographic unit for breast cancer screening, 15:49698 (R;GB)
Screening with mammography - what quality is required and how is it checked?, 15:49676 (RA;GB)

Quality Assurance
A protocol for the commissioning and routine testing of mammographic X-ray systems, 15:49675 (RA;GB)
Field size and centring for conventional X-ray equipment, 15:49670 (RA;GB)
Mandatory quality assurance programmes for diagnostic radiology facilities in Ontario, Canada: Minimum requirements and limiting values, 15:49664 (RA;GB)
Procuring, maintaining and using equipment: the key issues in controlling exposure to patients, 15:49661 (RA;GB)
Proposed limiting values for performance criteria in acceptance testing of diagnostic X-ray equipment in the Federal Republic of Germany, 15:49662 (RA;GB)
Quality assurance and the World Health Organization initiative of 'Health for All' (Diagnostic radiology.), 15:49666 (RA;GB)
Screening with mammography - what quality is required and how is it checked?, 15:49676 (RA;GB)
The Northern Regional Programme for the acceptance testing of X-ray equipment, 15:49663 (RA;GB)

Quality Control
An electronic instrument for high-voltage measurements of an X-ray unit for mammography, 15:49678 (RA;GB)
Organizing quality control programmes, 15:49660 (RA;GB)
Quality control of dental X-ray units, 15:49679 (RA;GB)

Who
Quality assurance and the World Health Organization initiative of 'Health for All' (Diagnostic radiology.), 15:49666 (RA;GB)

X-RAY SOURCES
Superconducting x-ray lithography source Phase 1 (XLS) safety analysis report, 15:49276 (R;US)
The Brookhaven Superconducting X-Ray Lithography Source (SXLS), 15:49275 (R;US)

X-RAY SPECTROMETERS
An improved operating mode for a Si(Li) x-ray spectrometer, 15:49330 (J;US)
High-resolution spectrometer with a spherical crystal for the T-15 tokamak, 15:50137 (RA;CS;In Russian)
X-ray monochromator for ion temperature measurements in the T-15 tokamak, 15:50138 (RA;CS;In Russian)
X-ray spectrometer for the T-15 tokamak, 15:50139 (RA;CS;In Russian)
X-ray spectrometry in vivo a Si(Li)-NaI(T1) detector, 15:49352 (J;US)

X-RAY TUBES
Determination of high voltage: Methods of measurement, practicality, accuracy and regulations concerning tolerances, 15:49673 (RA;GB)

X-ZERO RESONANCES
See ETA PRIME-958 MESONS

XENON
Large collective lamb shifts in high pressure noble gases, 15:49871 (R;US)
XENON 132 REACTIONS
Central collisions at the fermi energy, 15:50012 (R;FR)
XYLANS
Synthesis of cell wall xylans and glucans by golgi membranes, 15:49649 (J;US)

Y

Y*RESONANCES
See BARYONS
Y-12 PLANT
A process monitoring strategy for a Precision Flexible Manufacturing System, 15:49169 (R;US)
YELLOW CAKE
See URANIUM OXIDES U3O8
YEREVAN SYNCHROTRON
See EREVAN SYNCHROTRON
YIELD (FISSION)
See FISSION YIELD
YTTERBIUM 172
Description of low-lying vibrational $K^{\pi} \neq 0^{+}$ states of deformed nuclei in the quasiparticle-phonon nuclear model, 15:50041 (R;SU)
YTTERBIUM COMPLEXES
On the stability and bonding in bis(η-arene)lanthanide complexes, 15:49063 (RA;US)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YTTRIUM BORIDES
$(Me_5C_5)_2Yb(\mu\text{-}H_3B)(PMe_3)$: A complex with a near-linear BH_3 bridging group, 15:49016 (RA;US)
YTTRIUM COMPLEXES
Electron-transfer chemistry of $(Me_5C_5)_2Yb$: Cleavage of diorganoperoxide and related chalcogenides to give $(Me_5C_5)_2Yb(ER)(L)$ where e is O, S, Se, or Te and L is a Lewis Base; crystal structure of $(Me_5C_5)_2Yb(TePh)(NH_3)$, 15:49018 (RA;US)
Reaction of $(Me_5C_5)_2Yb$ with fluorocarbons: Formation of $(Me_5C_5)_4Yb_2(\mu\text{-}F)$ by intermolecular C-F activation, 15:49017 (RA;US)
The electronic structure of organometallic complexes of the f elements - XXIII. Interpretation of the magnetochemical and optical data of a tetrahydrofuran adduct derived from tris(η^5 cyclopentadienyl)-ytterbium(III), 15:49064 (RA;US)
YTTRIUM FLUORIDES
Reaction of $(Me_5C_5)_2Yb$ with fluorocarbons: Formation of $(Me_5C_5)_4Yb_2(\mu\text{-}F)$ by intermolecular C-F activation, 15:49017 (RA;US)
YTTRIUM OXIDES
Development of high-Tc superconducting wire with high critical current density, 15:48935 (R;JP)
Experimental studies of effect of high current pulse electron and carbon ion beams on high temperature Y-Ba-Cu-O, Bi-Ca-Sr-Cu-O superconductors, 15:50078 (R;SU;In Russian)
Fabrication of composite high temperature superconductor wires from Ag/$YBa_2Cu_3O_x$ power produced by $AgNO_3$ decomposition, 15:48901 (R;US)
In-situ transmission electron microscopy and computer simulation study of the kinetics of oxygen loss in $YBa_2Cu_3O_z$, 15:48932 (R;US)
International workshop on ion beam modification and processing of high-Tc superconductors: Physics and devices: Program and abstracts, 15:48905 (R;GB)
On the electronic structure of high temperature superconductors: Nonalloyed CuOsub 2 plane, 15:50077 (R;SU;In Russian)
Processing of $YBa_2Cu_3O_7$ tapes from a molten salt precursor, 15:48924 (R;US)
Simultaneous particulates, NO_x, SO_x removal from flue gas by all solid-state electrochemical technology: Technical progress report No. 8, April 1, 1989–June 30, 1989, 15:48510 (R;US)
Thermodynamic critical field of $Y_1Ba_2Cu_3O_7$, 15:48921 (R;US)
$YBa_2Cu_3O_x$ composites with improved toughness and strength, 15:48916 (R;US)
YTTRIUM PHOSPHATES
Electron exchange between potassium bis(t-butyl(8)annulene)ytterbate(II) and potassium bis(t-butyl(8)annulene)ytterbate(III), 15:49061 (RA;US)
YTTRIUM TELLURIDES
Bis(bis(pentamethylcyclopentadienyl)Ytterbium(III)) ditelluride, 15:49015 (RA;US)
YUCCA MOUNTAIN
Geologic Models
Modeling of coupled heat-mass stress effects in geologic media, 15:48342 (BA;US)
Geophysics
Concepts in prototype testing for in situ geomechanical investigations at Yucca Mountain, 15:48333 (BA;US)
The application of vertical seismic profiling and cross-hole tomographic imaging for fracture characterization at Yucca Mountain, 15:48330 (BA;US)
Radioactive Waste Disposal
A description and status of the Yucca Mountain Project repository sealing program, 15:48323 (BA;US)
Combined analytical/numerical approaches to solving fluid flow problems in the unsaturated zone at Yucca Mountain, 15:48338 (BA;US)
The use of performance assessments in Yucca Mountain repository waste package design activities, 15:48354 (BA;US)
Radioactive Waste Facilities
A waste package strategy for regulatory compliance, 15:48321 (BA;US)
Approach to developing a ground-motion design basis for facilities important to safety at Yucca Mountain, 15:48307 (BA;US)
Basaltic volcanic episodes of the Yucca Mountain region, 15:48296 (BA;US)
Computed distributions of residual shaft drilling and drift construction water in the exploratory facilities at Yucca Mountain, Nevada, 15:48349 (BA;US)
Initiating event identification and screening for nuclear waste repository preclosure risk assessment, 15:48378 (BA;US)
Linkage between site characterization program and performance and design data needs, 15:48359 (BA;US)
Managing local socioeconomic impacts through project management policies concerning subsidized transportation, site access, and on-site housing, 15:48313 (BA;US)
Multi-dimensional modeling of unsaturated flow in the vicinity of exploration shafts and fault zones at Yucca Mountain, Nevada, 15:48347 (BA;US)
Multidisciplinary hydrologic investigations at Yucca Mountain, Nevada, 15:48300 (BA;US)
Natural radionuclides in groundwater from J-13 well at the Nevada test site, 15:48310 (BA;US)
On-site representation and oversight: A special role for the state of the Nevada and Nye County in the civilian radioactive waste management program, 15:48312 (BA;US)
One-dimensional radionuclide transport under time-varying conditions, 15:48305 (BA;US)
Overview of the U.S. Department of Energy's PACE-90 geologic repository performance assessment exercise activity, 15:48355 (BA;US)
Preclosure safety analysis for a prospective Yucca Mountain conceptual design repository, 15:48317 (BA;US)
Prelimary methodology for design of stable drifts for the Yucca Mountain Project, 15:48297 (BA;US)
Prototype testing for the Yucca Mountain project, 15:48335 (BA;US)
Risk perspective on potential releases of ^{14}C from the geologic repository at Yucca Mountain, 15:48384 (BA;US)
Role of underground testing to determine suitability of Yucca Mountain as a potential repository site, 15:48299 (BA;US)
Simulation of radionuclide retardation at Yucca Mountain using a stochastic mineralogical/geochemical model, 15:48308 (BA;US)

Smoothwall blasting planned for the underground research facility at Yucca Mountain, 15:48298 (BA;US)
Status of integrated performance assessment of the waste packages and engineering barrier system, 15:48316 (BA;US)
Synthesis of studies for the potential of fault rupture at the proposed surface facilities, Yucca Mountain, Nevada, 15:48309 (BA;US)
Ventilation design for the Exploratory Shaft Facility Yucca Mountain Project, 15:48376 (BA;US)

Radioactive Waste Storage
Fabrication and closure development of nuclear waste containers for storage at the Yucca Mountain, Nevada repository, 15:48369 (BA;US)

Site Characterization
Environmental program overview for a high-level radioactive waste repository at Yucca Mountain (Yucca Mountain Project), 15:48268 (R;US)
Yucca Mountain Project far-field sorption studies and data needs, 15:48284 (R;US)

YUKON TERRITORY
Uppermost Devonian and lower Carboniferous stratigraphy, sedimentation, and diagenesis, southwestern District of Mackenzie and southeastern Yukon Territory (NTS 95 B, C, F, and G), 15:49736 (R;CA)

Z

Z PINCH DEVICES (LINEAR)

ZEA MAYS
See MAIZE

ZEOLITES
Improved Fischer-Tropsch Synthesis catalysts for indirect coal liquefaction: Quarterly technical progress report No. 8, 1 July–30 September 1987, 15:48075 (R;US)

ZET PINCH
See LONGITUDINAL PINCH

ZINC
Work in progress, 15:49100 (RA;US)

ZINC 68 TARGET
Detection and experimental investigation of α-particle Wolf-Bragg scattering on quasicrystalline atomic nuclei, 15:49990 (R;SU;In Russian)

ZINC COMPOUNDS
See also ZINC OXIDES
ZINC SULFIDES
ZINC TELLURIDES
Assessment of modular IGCC plants based on entrained flow coal gasification supplemental studies, 15:48489 (R;US)

ZINC OXIDES
Spatially resolved Raman spectroscopy in the study of transformed zones in PSZ, 15:49077 (RA;US)

ZINC SULFIDES
A more rugged ZnS(Ag) alpha scintillation detector, 15:49564 (J;US)

ZINC TELLURIDES
Optical characterization of CdZnTe/CdTe strained quantum wells, 15:48978 (R;US)

ZINC-AIR BATTERIES
Electrical and electrochemical behavior of particulate electrodes, 15:49107 (RA;US)
Work in progress, 15:49109 (RA;US)

ZIRCALOY
See also ALLOY-ZR98SN-4
The MERLIN programme: Pt. 2, A description of the MERLIN rig, 15:48662 (R;GB)

ZIRCONIUM
See also ZIRCONIUM-ALPHA
Optical study and analysis of Pu^{4+} in single crystals of $ZrSiO_4$, 15:49020 (RA;US)
[Defects in close-packed metals and alloys]: Foreign trip report, August 9, 1990–August 22, 1990, 15:48896 (R;US)

ZIRCONIUM ALLOYS
An apparatus for studies of hydrogen isotope exchange over metals using laser-Raman spectroscopy, 15:48998 (R;US)

ZIRCONIUM OXIDES
Simultaneous particulates, NO_x, SO_x removal from flue gas by all solid-state electrochemical technology: Technical progress report No. 8, April 1, 1989–June 30, 1989, 15:48510 (R;US)
Theory of ceramic/zirconia composites: Toughening, strengthening, and synergism, 15:48904 (R;US)

ZIRCONIUM-ALPHA
Application of ion beam sputtering for diffusion study in solids, 15:50065 (R;GB)

Contract Number Index

Numbers assigned to DOE contracts announced in documents in this publication are listed. Contract numbers are sorted alphanumerically and list the primary corporate author of the document cited, the citation number, and the report number or other document identification.

Contract No.	Abstract No.	Report No.
AC01-87CE40762	**Solar Energy Research Inst., Golden, CO (USA)**

Report Number Index

The report number index consists of the alphanumeric identifiers assigned to report literature as well as patent and conference literature cited in this publication. Entries provide the abstract number; the source(s) of availability of the document; the GPO file prefix for GPO depository library documents; the order number for OSTI and NTIS report ordering purposes; and, if the document was distributed under the DOE distribution program, the category number is shown for paper copy (PC), microfiche (MF), or no distribution (ND). These categories are included to assist DOE librarians in responding to requests for reports in their collections. The index also lists secondary numbers, with the corresponding abstract numbers and cross-references to other identifying numbers.

Codes Used on Index Lines

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;In Russian). The language designator does not appear if the document is published in English.

Document Types

J	Journal article
TJ	Translation of a journal article
R	Report
RA	Report analytic
B	Book
BA	Book analytic

ORDER FORM

DOE and DOE Contractors: Fill in Parts I, II, and IV. **Others:** Fill in Parts I, III, and IV. Mark appropriate blanks in Part IV to indicate quantity and form (microfiche or paper copy).

I. SHIPPING AND PAYMENT INFORMATION

Ordering Address

Name _____ Telephone _____

Address _____

City _____ State _____ Zip _____

Shipping Address (if different from above)

Name _____

Address _____

City _____ State _____ Zip _____

_____

SIGNATURE (Required to validate ALL orders)

II. OSTI ORDERS (DOE and DOE contractors can order from OSTI.)

☐ Charge OSTI deposit account no. _____

Mail orders to: U.S. Department of Energy
Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831

III. NTIS ORDERS

☐ Charge NTIS deposit account no.

☐ Check/Money Order enclosed for $

☐ Charge to my ☐ American Express ☐ VISA ☐ Mastercard

_____ _____
Account Number **Card expiration date**

☐ Ship and Bill (see below for restrictions)

Employer identification number (9 digits) _ _–_ _ _ _ _ _ _

Purchase Order number _____

Phone number of billing office _____
(Required for Ship & Bill orders)

Ship & Bill service is restricted to North American business locations for an extra $7.50 per order (or per Custom Search). The business' employer identification number plus the phone number of the office paying the bill are required to process these requests. A late payment charge will be applied to billings more than 30 days overdue. Prepaying, using an NTIS Deposit Account or a charge account, speeds order processing. Be sure payment and order are sent together. Checks, payable to NTIS, must be in U.S. dollars.

Mail orders to: U.S. Department of Commerce
National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161

IF NO METHOD OF PAYMENT IS INDICATED, YOUR ORDER WILL BE RETURNED TO YOU AS A PRICE QUOTE UNPROCESSED.

Federal Depository Library Program

As a result of an agreement between the U.S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are not sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
